The Sympathy Of Things Ruskin And The Ecology Of Design:

Sympathy of Things Lars Spuybroek, 2011 We have to find our way back to beauty writes Lars Spuybroek in the introduction to *The Sympathy of Things* In this book Spuybroek argues that we must undo the twentieth century the age in which the sublime turned from an art category into a technical reality This leads him to the aesthetical insights of the nineteenth century English art critic John Ruskin from which he distils pointers for our time In *The Sympathy of Things* the old romantic notion of sympathy a core concept in Ruskin's aesthetics is re-evaluated as the driving force of the aesthetic experience For Ruskin beauty always comprises variation imperfection and fragility three concepts that wholly disappeared from our mindsets during the twentieth century Spuybroek addresses the five central dual themes of Ruskin in turn the Gothic and work ornament and matter sympathy and abstraction the picturesque and time ecology and design He wrests each of these themes from the Victorian era and compares them with the related ideas of later aestheticians and philosophers like William James and Bruno Latour *The Sympathy of Things* Lars Spuybroek, 2020 [Theorizing and Measuring Affect in Mathematics Teaching and Learning](#) Chiara Andrà, Domenico Brunetto, Francesca Martignone, 2021-01-23 This book presents a literature review of and a state of the art glimpse into current research on affect related aspects of teaching and learning in and beyond mathematics classrooms Then research presented at the MAVI 25 Conference which took place in Intra Italy in June 2019 is grouped in thematic strands that capture cutting edge issues related to affective components of learning and teaching mathematics The concluding chapter summarises the main messages and sketches future directions for research on affect in mathematics education The book is intended for researchers in mathematics education and especially graduate students and PhD candidates who are interested in emotions attitudes motivations beliefs needs and values in mathematics education *The Architecture of Neoliberalism* Douglas Spencer, 2016-10-20 The Architecture of Neoliberalism pursues an uncompromising critique of the neoliberal turn in contemporary architecture This book reveals how a self-styled parametric and post-critical architecture serves mechanisms of control and compliance while promoting itself at the same time as progressive Spencer's incisive analysis of the architecture and writings of figures such as Zaha Hadid Patrik Schumacher Rem Koolhaas and Greg Lynn shows them to be in thrall to the same notions of liberty as are propounded in neoliberal thought Analysing architectural projects in the fields of education consumption and labour *The Architecture of Neoliberalism* examines the part played by contemporary architecture in refashioning human subjects into the compliant figures student entrepreneurs citizen consumers and team workers requisite to the universal implementation of a form of existence devoted to market imperatives **Interrogating Networks** Lin Foxhall, 2021-06-09 Network theory and methodologies have become central to exploring and explaining social economic and political relationships and connections in past societies However in archaeology the deployment of networks has sometimes been more descriptive than analytical Methodologies have often depended upon underlying assumptions which inevitably simplify relationships that were

complex and multi faceted However the fragmentary heterogenous and usually proxy data we possess are not always amenable to reconstructing that complexity In ancient societies we must infer the movement of knowledge about how to make things largely from objects themselves This is because we usually lack direct evidence of the human relationships that entwined people with objects and their makers and hence have only imperfect understanding of the full range of diverse factors that shaped the relationships that constituted these networks The chapters in this volume aim to interrogate the interpretative potential of network concepts for understanding the movement over time and space of ideas about making using and moving things through a range of archaeological case studies which reveal both functional and dysfunctional relationships The purpose is to consider how more broadly contextualized and multi faceted studies can both enhance and be enhanced by network and related approaches The volume contributes to the search for greater understanding of the movement and transmission of knowledge or in some cases their absence and to debates about how best to expand the utility of network concepts and approaches

The Material Culture of Basketry Stephanie Bunn,Victoria Mitchell,2020-10-29

The Material Culture of Basketry celebrates basketry as a culturally significant skilled practice and as a theoretically rich discipline which has much to offer contemporary society While sometimes understudied and underappreciated it has much in common with mathematics and engineering art craft and design and can also act as a socially beneficial source of skill and care Contributors show how local knowledge of materials plants and place are central to the craft Case studies include the skill in weaverbird nest building challenging how we perceive learning in craft and nature an engineer s perspective on twining Peruvian grass bridges and the local knowledge embodied in Pacific plaited patterns and knots Photo essays explore materials and techniques from the point of view of artists anthropologists and mathematicians revealing how the structure and skill in basketwork illustrate a significant form of textile technology Thus the book argues that the textures patterns and geometric forms that emerge through basketwork reflect an embodied knowledge which expresses mathematical and engineering comprehension The therapeutic value of the craft is recognised through a selection of case studies which consider basketry as a healing process for patients with brain injury mental health problems and as a memory aid for people living with dementia This reclaims basketry s significant role in occupational therapy as an agent of recovery and well being Finally basketry s inherently sustainable nature is also considered demonstrating the continuation of basketry in spite of handwork s general decline and profiling new and recycled materials Above all the book envisages basketry as an intellectually rewarding means of knowing It presents the craft as embodying care for skilled making and for the social and natural environments in which it flourishes

Making is Connecting David Gauntlett,2018-05-21 SECOND UPDATED

EDITION WITH THREE ALL NEW CHAPTERS The first edition of Making is Connecting struck a chord with crafters YouTubers makers music producers artists and coders alike David Gauntlett argues that through making things people engage with the world and create connections with each other Online and offline we see that people want to make their mark

Theory and Contemporary Architecture Grant Alford, 2025-05-28 This book offers a comprehensive exploration of craft theory in relation to contemporary architecture Craft is an old and familiar idea but the line between craft and art or craft and mere manufacturing for example is notoriously hard to describe In architecture a similarly blurred line between the design process on the one hand and the physical making of buildings on the other lies at the center of various debates about what it means to do architecture The growth and development of craft theory in recent years suggest new insights into these architectural debates but situating the meaning of craft within architecture within today's technological landscape is a complex problem Alford responds to this challenge by collecting various narratives from craft theory and other fields and discerning among them new lenses through which to view contemporary architectural practice Episodes from this expanded view of craft in architecture go beyond predictable accounts of Ruskin and Morris to envision new models of practice new ways of engaging other building professionals and new ways for architects to understand their own labor and the nature of how and what kinds of things they themselves craft Architecture is changing and within the ongoing story of craft explored in this book are new and surprising ways to understand design and construct the built environment Written for students and scholars this book challenges and extends the legacy of craft thinking in architecture

The Fair-Line and the Good Frontage Stephen Walker, 2018-03-06 This book offers an extended consideration of the fairground showfront It combines archival material contemporary examples of fairs and a sustained theoretical engagement with influential philosophies of surface including recent work by Avrum Stroll and Andrew Benjamin as well as the nineteenth century author Gottfried Semper Semper's work on the origin of architectural enclosure formed from woven mats and carpets anticipates the surface and material history of the showfront Initial chapters introduce these philosophies the evolution of showfronts and the ways in which individual fairground rides and attractions are arranged to form an enclosing boundary for the whole fair Later chapters focus on issues of spectacle and illusion vast interior spaces atmosphere crowds and surface effects Informed by a wide range of work from other design and cultural studies the book will be of interest to readers in these areas as well as architecture and those curious about the fairground

Industries of Architecture Katie Lloyd Thomas, Tilo Amhoff, Nick Beech, 2015-11-06 At a time when the technologies and techniques of producing the built environment are undergoing significant change this book makes central architecture's relationship to industry Contributors turn to historical and theoretical questions as well as to key contemporary developments taking a humanities approach to the Industries of Architecture that will be of interest to practitioners and industry professionals as much as to academic researchers teachers and students How has modern architecture responded to mass production How do we understand the necessarily social nature of production in the architectural office and on the building site And how is architecture entwined within wider fields of production and reproduction finance capital the spaces of regulation and management techniques What are the particular effects of techniques and technologies and above all their inter relations on those who labour in architecture the buildings they

produce and the discursive frameworks we mobilise to understand them

Nomadic Theatre Liesbeth Groot Nibbelink, 2019-04-18 Fluid stages morphing theatre spaces ambulant spectators and occasionally disappearing performers these are some of the key ingredients of nomadic theatre They are also theatre's response to life in the 21st century which is increasingly marked by the mobility of people information technologies and services While examining how contemporary theatre exposes and queries this mobile turn in society Liesbeth Groot Nibbelink introduces the concept of nomadic theatre as a vital tool for analyzing how movement and mobility affect and implicate the theatre how this makes way for local operations and lived spaces and how physical movements are stepping stones for theorizing mobility at large This book focuses on ambulatory performances and performative installations asking how they stage movement and in turn mobilize the stage By analyzing the work of leading European artists such as Rimini Protokoll Dries Verhoeven Ontroerend Goed and Signa Nomadic Theatre demonstrates that mobile performances radically rethink the conditions of the stage and alter our understanding of spectatorship Nomadic Theatre instigates connections across disciplinary fields and feeds dramaturgical analysis with insights derived from media theory urban philosophy cartography architecture and game studies It illustrates how theatre as a material form of thought creatively and critically engages with mobile existence both on the stage and in society

Deleuze and Architecture Helene Frichot, 2013-05-20 Critiques the legacy and ongoing influence of Deleuze on the discipline and practice of architecture This collection looks critically at how Deleuze challenges architecture as a discipline how architecture contributes to philosophy and how we can come to understand the complex politics of space of our increasingly networked world Since the 1980s Deleuze's philosophy has fuelled a generation of architectural thinking and can be seen in the design of a global range of contemporary built environments His work has also alerted architecture to crucial ecological political and social problems that the discipline needs to reconcile

Victorian Structures Jody Griffith, 2020-03-01 Although Victorian novels often feature lengthy descriptions of the buildings where characters live work and pray we may not always notice the stories these buildings tell But when we do pay attention we find these buildings offer more than evocative background settings Victorian Structures uses the architectural writings of Victorian critic John Ruskin as a framework for examining the interaction of physical social and narrative structures in Little Dorrit by Charles Dickens Adam Bede by George Eliot and The Mayor of Casterbridge and Jude the Obscure by Thomas Hardy By closely reading their descriptions of architectural structure this book reconsiders structure itself both the social structures the novels reflect and the narrative structures they employ Weaving together analysis of these three kinds of structure offers an interpretation of Victorian realism that is far more socially and formally unstable than critics have tended to assume It illustrates how these novels radically critique the limitations dysfunctions and deceptions of structure while also imagining alternative possibilities This unique interdisciplinary approach emphasizes structure in time while current conversations about structure focus on its static and fixed properties this book understands it as various forces in tension producing meanings that are always in flux

Victorian Structures focuses not only on the way structures shape our perceptions and experiences but also more importantly on the processes through which those structures come to be constructed in the first place and how they change over time
