Topics In Nonlinear Functional Analysis Topics In Nonlinear Functional Analysis:

Topics in Nonlinear Functional Analysis Djairo Guedes de Figueiredo, 1967 *Topics in Nonlinear Functional Analysis* L. Nirenberg, 1974 Since its first appearance as a set of lecture notes published by the Courant Institute in 1974 this book served as an introduction to various subjects in nonlinear functional analysis The current edition is a reprint of these notes with added bibliographic references Topological and analytic methods are developed for treating nonlinear ordinary and partial differential equations The first two chapters of the book introduce the notion of topological degree and develop its basic properties These properties are used in later chapters in the discussion of bifurcation theory the possible branching of solutions as parameters vary including the proof of Rabinowitz global bifurcation theorem Stability of the branches is also studied The book concludes with a presentation of some generalized implicit function theorems of Nash Moser type with applications to Kolmogorov Arnold Moser theory and to conjugacy problems For more than 20 years this book continues to be an excellent graduate level textbook and a useful supplementary course text Titles in this series are copublished with the Courant Institute of Mathematical Sciences at New York University Topics in Nonlinear Functional Analysis L. Nirenberg, 2025 *Topics in nonlinear functional analysis* Louis Nirenberg, 1974 Some Topics in Nonlinear Functional Analysis Mohan C. Joshi, Ramendra K. Bose, 1985 **Lectures In Nonlinear Functional Analysis: Synopsis Of Lectures Given At The Faculty Of Physics Of Lomonosov Moscow State University** Maxim Olegovich Korpusov, Alexey V Ovchinnikov, Alexander Anatolyevich Panin, 2021-12-28 This book is a systematic presentation of basic notions facts and ideas of nonlinear functional analysis and their applications to nonlinear partial differential equations It begins from a brief introduction to linear functional analysis including various types of convergence and functional spaces The main part of the book is devoted to the theory of nonlinear operators Various methods of the study of nonlinear differential equations based on the facts of nonlinear analysis are presented in detail This book may serve as an introductory textbook for students and undergraduates specializing in modern mathematical physics Topics in Nonlinear Functional Analysis , 1970

Geometric Properties of Banach Spaces and Nonlinear Iterations Charles Chidume, 2008-12-21 The contents of this monograph fall within the general area of nonlinear functional analysis and applications We focus on an important topic within this area geometric properties of Banach spaces and nonlinear iterations a topic of intensive research efforts especially within the past 30 years or so In this theory some geometric properties of Banach spaces play a crucial role In the first part of the monograph we expose these geometric properties most of which are well known As is well known among all infinite dimensional Banach spaces Hilbert spaces have the nicest geometric properties The availability of the inner product the fact that the proximity map or nearest point map of a real Hilbert space H onto a closed convex subset K of H is Lipschitzian with constant 1 and the following two identities $\|x - y\|^2 = \|x\|^2 - 2\langle x, y \rangle + \|y\|^2$ and $\|x + y\|^2 = \|x\|^2 + 2\langle x, y \rangle + \|y\|^2$ which hold for all $x, y \in H$ are some of the geometric properties that characterize inner product spaces and also make certain problems posed in Hilbert spaces more

manageable than those in general Banach spaces However as has been rightly observed by M Hazewinkel many and probably most mathematical objects and models do not naturally live in Hilbert spaces Consequently

to extend some of the Hilbert space techniques to more general Banach spaces analogues of the identities and have to be developed

Topics in Nonlinear Functional Analysis Djairo Guedes de Figueiredo (Mathematiker, Brasilien), 1967 **Linear and Nonlinear Functional Analysis with Applications** Philippe G. Ciarlet, 2013-10-10 This single volume textbook covers the fundamentals of linear and nonlinear functional analysis illustrating most of the basic theorems with numerous applications to linear and nonlinear partial differential equations and to selected topics from numerical analysis and optimization theory This book has pedagogical appeal because it features self contained and complete proofs of most of the theorems some of which are not always easy to locate in the literature or are difficult to reconstitute It also offers 401 problems and 52 figures plus historical notes and many original references that provide an idea of the genesis of the important results and it covers most of the core topics from functional analysis **Nonlinear Functional Analysis** Klaus Deimling, 2013-10-09 This text offers a survey of the main ideas concepts and methods that constitute nonlinear functional analysis It features extensive commentary many examples and interesting challenging exercises 1985 edition **Topics in Nonlinear Functional Analysis, 1973-1974 [By] L. Nirenberg. Notes by R.A. Artino** L. Nirenberg, Courant Institute of Mathematical Sciences, 1974 **Nonlinear Functional Analysis** Jacob T. Schwartz, 1969 Contributions to Nonlinear Functional Analysis Eduardo H. Zarantonello, 2014-05-10 Contributions to Nonlinear Functional Analysis contains the proceedings of a Symposium on Nonlinear Functional Analysis held in Madison Wisconsin on April 12 14 1971 under the sponsorship of the University of Wisconsin s Mathematics Research Center The symposium provided a forum for discussing various topics related to nonlinear functional analysis from transversality in nonlinear eigenvalue problems to monotonicity methods in Hilbert spaces and some applications to nonlinear partial differential equations Comprised of 15 chapters this book begins by presenting an extension of Leray Schauder degree and an application to a nonlinear elliptic boundary value problem The discussion then turns to the use of degree theory to prove the existence of global continua of solutions of nonlinear eigenvalue problems transversality in nonlinear eigenvalue problems and how variational structure can be used to study some local questions in bifurcation theory Subsequent chapters deal with the notion of monotone operators and monotonicity theory a nonlinear version of the Hille Yosida theorem a version of the penalty method for the Navier Stokes equations and various types of weak solutions for minimizing problems in the spirit of duality theory for convex functionals This monograph will be of interest to students and practitioners in the field of mathematics who want to learn more about nonlinear functional analysis **Nonlinear Functional Analysis and Its Applications** Radu Precup, 2021-04-14 This book consists of nine papers covering a number of basic ideas concepts and methods of nonlinear analysis as well as some current research problems Thus the reader is introduced to the fascinating theory around Brouwer s fixed point theorem to Granas theory of

topological transversality and to some advanced techniques of critical point theory and fixed point theory Other topics include discontinuous differential equations new results of metric fixed point theory robust tracker design problems for various classes of nonlinear systems and periodic solutions in computer virus propagation models

Applied Nonlinear Functional Analysis Nikolaos S. Papageorgiou, Patrick Winkert, 2024-07-01 The second edition covers the introduction to the main mathematical tools of nonlinear functional analysis which are also used in the study of concrete problems in economics engineering and physics The new edition includes some new topics on Banach spaces of functions and measures and nonlinear analysis

Nonlinear Functional Analysis and Its Applications S.P. Singh, 2012-12-06 A NATO Advanced Study Institute on Nonlinear Functional Analysis and Its Applications was held in Hotel Villa del Mare Maratea Italy during April 22 May 3 1985 This volume consists of the Proceedings of the Institute These Proceedings include the invited lectures and contributed papers given during the Institute The papers have been refereed The aim of these lectures was to bring together recent and up to date development of the subject and to give directions for future research The main topics covered include degree and generalized degree theory results related to Hamiltonian Systems Fixed Point theory linear and nonlinear Differential and Partial Differential Equations Theory of Nielsen Numbers and applications to Dynamical Systems Bifurcation Theory Hamiltonian Systems Minimax Theory Heat Equations Pendulum Equation Nonlinear Boundary Value Problems and Dirichlet and Neumann problems for elliptic equations and the periodic Dirichlet problem for semilinear beam equations I express my sincere thanks to Professors F E Browder R Conti A Do1d D E Edmunds and J Mawhin members of the Advisory Committee

Nigel Kalton's Lectures in Nonlinear Functional Analysis Adam Bowers, 2024-10-02 The main theme of the book is the nonlinear geometry of Banach spaces and it considers various significant problems in the field The present book is a commented transcript of the notes of the graduate level topics course in nonlinear functional analysis given by the late Nigel Kalton in 2008 Nonlinear geometry of Banach spaces is a very active area of research with connections to theoretical computer science noncommutative geometry as well as geometric group theory Nigel Kalton was the most influential and prolific contributor to the theory Collected here are the topics that Nigel Kalton felt were significant for those first dipping a toe into the subject of nonlinear functional analysis and presents these topics in an accessible and concise manner As well as covering some well known topics it also includes recent results discovered by Kalton and his collaborators which have not previously appeared in textbook form A typical first year course in functional analysis will provide sufficient background for readers of this book

Genericity in Nonlinear Analysis Simeon Reich, Alexander J. Zaslavski, 2013-11-21 This book presents an extensive collection of state of the art results and references in nonlinear functional analysis demonstrating how the generic approach proves to be very useful in solving many interesting and important problems Nonlinear analysis plays an ever increasing role in theoretical and applied mathematics as well as in many other areas of science such as engineering statistics computer science economics finance and medicine The text may be used as

supplementary material for graduate courses in nonlinear functional analysis optimization theory and approximation theory and is a treasure trove for instructors researchers and practitioners in mathematics and in the mathematical sciences Each chapter is self contained proofs are solid and carefully communicated Genericity in Nonlinear Analysis is the first book to systematically present the generic approach to nonlinear analysis Topics presented include convergence analysis of powers and infinite products via the Baire Category Theorem fixed point theory of both single and set valued mappings best approximation problems discrete and continuous descent methods for minimization in a general Banach space and the structure of minimal energy configurations with rational numbers in the Aubry Mather theory Nonlinear Functional Analysis and Its Applications E. Zeidler, 1985 As long as a branch of knowledge offers an abundance of problems it is full of vitality David Hilbert Over the last 15 years I have given lectures on a variety of problems in nonlinear functional analysis and its applications In doing this I have recommended to my students a number of excellent monographs devoted to specialized topics but there was no complete survey type exposition of nonlinear functional analysis making available a quick survey to the wide range of readers including mathematicians natural scientists and engineers who have only an elementary knowledge of linear functional analysis I have tried to close this gap with my five part lecture notes the first three parts of which have been published in the Teubner Texte series by Teubner Verlag Leipzig 1976 1977 and 1978 The present English edition was translated from a completely rewritten manuscript which is significantly longer than the original version in the Teubner Texte series The material is organized in the following way Part I Fixed Point Theorems Part II Monotone Operators Part III Variational Methods and Optimization Parts IV jV Applications to Mathematical Physics The exposition is guided by the following considerations a What are the supporting basic ideas and what intrinsic interrelations exist between them 3 In what relation do the basic ideas stand to the known propositions of classical analysis and linear functional analysis y What typical applications are there VII Preface viii Special emphasis is placed on motivation
