The Bronze Age Towers at Bat, Sultanate of Oman Christopher P. Thornton, 2016 In the third millennium B C E the Oman Peninsula was the site of an important kingdom known in Akkadian texts as Magan which traded extensively with the Indus Civilization southern Iran the Persian Gulf states and southern Mesopotamia Excavations have been carried out in this region since the 1970s although the majority of studies have focused on mortuary monuments at the expense of settlement archaeology While domestic structures of the Bronze Age have been found and are the focus of current research at Bat most settlements dating from the third millennium B C E in Oman and the U A E are defined by the presence of large circular monuments made of mudbrick or stone that are traditionally called towers Whether these so called towers are defensive agricultural political or ritual structures has long been debated but very few comprehensive studies of these monuments have been attempted Between 2007 and 2012 the University of Pennsylvania Museum of Archaeology and Anthropology conducted excavations at the UNESCO World Heritage Site of Bat in the Sultanate of Oman under the direction of the late Gregory L Possehl The focus of these years was on the monumental stone towers of the third millennium B C E looking at the when how and why of their construction through large scale excavation GIS aided survey and the application of radiocarbon dates This has been the most comprehensive study of nonmortuary Bronze Age monuments ever conducted on the Oman Peninsula and the results provide new insight into the formation and function of these impressive structures that surely formed the social and political nexus of Magan s kingdom

Technological Advancements in Construction Angela Mottaeva, 2021-09-06 The book consists of original research papers in the field of Technological Advancements in Construction It covers such topics as non destructive testing structural health monitoring innovative composite materials strengthening and rehabilitation of buildings and structures seismic resilience of structures thermal protection of buildings construction and operation of buildings and structures in extreme climatic conditions structural dynamics and vibration control and green construction The book contains latest information on structural mechanics of composite materials and structures theoretical and computational modeling of new materials and structures experimental and numerical analysis in building rehabilitation and strengthening analytical numerical and experimental methodologies for the analysis of multilayered structures and advanced methods for seismic performance evaluation of building structures The book includes original research and application papers of high academic level where significant scientific novelty is clearly demonstrated The book presents a valuable tool for researchers and construction professionals

Surveying for Engineers John Uren, Bill Price, 2018-03-13 The fifth edition of this classic textbook sets out the essential techniques needed for a solid grounding in the surveying The popular and trusted textbook covers the traditional topics such as levelling measurement of angles measuring distances and how to carry out traversing and compute coordinates as well as the latest technological advances It is packed with clear illustrations exercises and worked examples making it both a comprehensive study aid for students and a reliable reference

tool for practitioners This text is aimed at students studying surveying as either part of a civil engineering building or construction course or as a separate discipline It is also useful for students who undertake surveying as an elective subject and is a useful resource for practising surveyors New to this Edition The latest developments in Global Navigation Satellite Systems GNSS particularly the introduction of network RTK and OS Net and their applications Recent developments in survey instruments methods and digital technologies including image processing with total stations and laser planners developments in data processing and integration and updates on Ordnance Survey mapping products Construction 4.0 Marco Casini, 2021-11-24 Developments in data acquisition technologies digital information and analysis automated construction processes and advanced materials and products have finally started to move the construction industry traditionally reluctant to innovation and slow in adopting new technologies toward a new era Massive changes are occurring because of the possibilities created by Building information modeling Extended reality Internet of Things Artificial intelligence and Machine Learning Big data Nanotechnology 3D printing and other advanced technologies which are strongly interconnected and are driving the capabilities for much more efficient construction at scale Construction 4.0 Advanced Technology Tools and Materials for the Digital Transformation of the Construction Industry provides readers with a state of the art review of the ongoing digital transformation of the sector within the new 4.0 framework presenting a thorough investigation of the emerging trends technologies and strategies in the fields of smart building design construction and operation and providing a comprehensive guideline on how to exploit the new possibilities offered by the digital revolution It will be an essential reference resource for academic researchers material scientists and civil engineers undergraduate and graduate students and other professionals working in the field of smart ecoefficient construction and cutting edge technologies applied to construction Provides an overview of the Construction 4.0 framework to address the global challenges of the building sector in the 21st century and an in depth analysis of the most advanced digital technologies and systems for the operation and maintenance of infrastructure real estate and other built assets Covers major innovations across the value chain including building design fabrication construction operation and maintenance and end of life Illustrates the most advanced digital tools and methods to support the building design activity including generative design virtual reality and digital fabrication Presents a thorough review of the most advanced construction materials building methods and techniques for a new connected and automated construction model Explores the digital transformation for smart energy buildings and their integration with emerging smart grids and smart cities Reflects upon major findings and identifies emerging market opportunities for the whole AECO sector Target Costing and Value Engineering Robin Cooper, 2017-10-19 What would happen if everyone in your company followed a disciplined approach to cost reduction Go ahead imagine it What would it look like How can it be done The answer smart cost management Effective cost management must start at the design stage As much as 90-95% of a product's costs are added in the design process That is why effective

cost management programs focus on design and manufacturing The primary cost management method to control cost during design is a combination of target costing and value engineering Target Costing Objectives Identify the cost at which your product must be manufactured at if it is to earn its profit margin at its expected target selling price Break the target cost down to its component level and have your suppliers find ways to deliver the components they sell you at the set target prices while still making adequate returns Value Engineering The connection to function An organized effort and team based approach to analyze the functions of goods and services that the design stage and find ways to achieve those functions in a manner that allows the firm to meet its target costs The result Added value for your company development costs on line with added value for your company development costs on line with selling prices and added value for your customer higher quality products that meet possibly even exceed customer expectations

Senèze: Life in Central France Around Two Million Years Ago Eric Delson, Martine Faure, Claude Guérin, 2025-04-09 The paleontological site of Sen ze Haute Loire central France was discovered in 1892 inside a volcanic crater For over 40 years local peasant Pierre Philis collected fossils and sold them to French and Swiss museums The site became world famous for its well preserved skeletons of ungulates and carnivores as well as rare but well preserved remains of primates and other mammals It is considered the reference fauna for the late Villafranchian and MNQ 18 biochronological units of European mammalian evolution but the lack of provenance data made modern research difficult From 2000 2006 the multidisciplinary Franco American Sen ze Research Project undertook five seasons of major fieldwork with the goals of clarifying the age stratigraphy and taphonomy of Sen ze as well as finding additional remains especially of the less well known taxa In this volume following a history of study and summary of the new fieldwork four geological chapters consider field methods stratigraphy volcanology and dating Combining argon argon ages and paleomagnetic calibration the newly recovered fossils are shown to date between 2 20 and 2 08 Ma with concentrations ca 2 20 2 18 and 2 10 2 08 Ma significantly older than previously thought Chapters on palynology ichthyology and ornithology are followed by eight chapters on the fossil mammals The chapter on biochronology places Sen ze among other sites at the start of MNQ 18 which is estimated to end ca 1 7 Ma Of some 2200 specimens known from the site over half are cervids with bovids rhinocerotids and equids far behind According to data from palynology and the habitat preferences of the more common mammals the paleoenvironment around the Sen ze maar would have included forest woodland and grassland perhaps in a warmer and moister climate than today Taphonomic studies revealed that bones often rested a long time under water lacked any indication of carnivore attack and often displayed pathologies in their joints It is likely that most of the associated skeletons were preserved undisturbed after large mammals fell into the paleolake and drowned without being able to climb out This book responds to the long held desire of later Cenozoic paleontologists to see a modern study of a site recognized worldwide as a biochronologic reference for the Plio Pleistocene Our study required renewed fieldwork using up to date techniques of topography sedimentology stratigraphy geochronology and taphonomy The systematic paleontology

chapters are based on re study of the entire body of Sen ze fossils collected during more than a century of research The volume will be of interest to paleontologists especially those concerned with the evolution of the European fauna and with the taxa studied as well as with paleoenvironmental reconstruction and biogeography It will also be of value to mammalogists interested in analyses of near modern taxa and to paleoanthropologists archaeologists and taphonomists interested in the methods utilized and the role of Sen ze as a comparative standard for a site of this age without human intervention It will surely be an essential reference for all those who want to know more about Life in Central France Around Two Million Years Ago

Close-Range Photogrammetry and 3D Imaging Thomas Luhmann, Stuart Robson, Stephen Kyle, Jan Boehm, 2019-11-18 This is the third edition of the well known guide to close range photogrammetry It provides a thorough presentation of the methods mathematics systems and applications which comprise the subject of close range photogrammetry which uses accurate imaging techniques to analyse the three dimensional shape of a wide range of manufactured and natural objects

Coastlines, Structures and Breakwaters N. W. H. Allsop, Institution of Civil Engineers (Great Britain), 1998 This work is a collection of papers from the 1998 Coastlines Structures and Breakwaters conference and draws together a diverse sampling of extensive and recent advances that EU countries have made in the design study and construction of significant breakwater structures

Handbook of Optical Metrology Toru Yoshizawa, 2017-07-28 Handbook of Optical Metrology Principles and Applications begins by discussing key principles and techniques before exploring practical applications of optical metrology Designed to provide beginners with an introduction to optical metrology without sacrificing academic rigor this comprehensive text Covers fundamentals of light sources lenses prisms and mirrors as well as optoelectronic sensors optical devices and optomechanical elements Addresses interferometry holography and speckle methods and applications Explains Moir metrology and the optical heterodyne measurement method Delves into the specifics of diffraction scattering polarization and near field optics Considers applications for measuring length and size displacement straightness and parallelism flatness and three dimensional shapes This new Second Edition is fully revised to reflect the latest developments It also includes four new chapters nearly 100 pages on optical coherence tomography for industrial applications interference microscopy for surface structure analysis noncontact dimensional and profile metrology by video measurement and optical metrology in manufacturing technology

eBook: Surveying for Construction, 5e IRVINE, 2021-03-26 eBook Surveying for Construction 5e Construction Equipment Management for Engineers, Estimators, and Owners, Second Edition Douglas D. Gransberg, Jorge A. Rueda, 2020-05-31 Construction

Equipment Management for Engineers Estimators and Construction Managers Second Edition has been extensively rewritten to not only bring it up to date with the state of current practice but also to serve as a textbook for university courses in construction engineering and management The authors advanced the previous edition s practical hands on approach and added material on the future of construction equipment fleet management which they believe will require a new technology

based skillset to maximize the cost effectiveness of construction equipment operations As such the book covers the latest construction equipment technologies Features Examines emergent technologies in the field including automated machine guidance systems intelligent compaction operations and equipment related civil integrated management tools Provides information on how to reduce an equipment fleet s environmental impact decreasing greenhouse gas emissions through enhanced equipment management and optimization practices Discusses estimating equipment ownership operating costs economic life and optimal replacement timing Demonstrates how to maximize profit by determining the optimum equipment mix and estimating productivity Illustrates the use of production based linear scheduling and stochastic simulations to maximize project cost and schedule certainty This new edition will serve as an essential textbook for students as well as a valuable reference for a wide range of professionals within the construction architecture and engineering industries

Surveying Instruments and Technology Leonid Nadolinets,Eugene Levin,Daulet Akhmedov,2017-07-06 With the advent of GPS GNSS satellite navigation systems and Unmanned Aerial Systems UAS surveying profession is nowadays facing its transformative stage Written by a team of surveying experts Surveyor s Instruments and Technology gives surveying students and practitioners profound understanding of how surveying instruments are designed and operating based on surveying instrument functionality The book includes the required basic knowledge of accurate measurements of distances and angles from theoretical principles to advanced optical mechanical electronic and software components for comparative analysis Readers are presented with basic elements of UAS systems practical interpretation techniques sensor components and operating platforms Appropriate for surveying courses at all levels this guide helps students and practitioners alike to understand what is behind the buttons of surveying instruments of all kinds when considering practical project implementations *World Highways* ,2005 Digital Earth Moving Caroline Y. Westort,2003-06-30 Digital manipulation of landform is revolutionizing how our built environment is designed and constructed On a technical level three dimensional geometric modeling of topography has its origins at the interface of geographic information systems GIS and computer aided geometric modeling CAD the former with its representations of spatial attribute information with digital terrain in several representations Triangulated Irregular Networks contour lines etc the latter focusing primarily on the parameterization and combination of geometric primitives The broadening of these two disciplines to embrace new surveying and navigation advances e g global positioning systems GPS together with developments in engineering on the application side are leading to powerful new suites of functionality There has been a pronounced need for a forum where these traditionally separate parties can interact These proceedings contain the technical papers selected and formally presented as part of the scientific program of the First International Symposium on Digital Earth Moving 2001 DEM 2001 held September 5 7 2001 at the CIM Institute for Computing Science and Industrial Technologies of the University of Applied Science of Southern Switzerland SUPSI iCIMS in Manno Lugano Switzerland It is the first volume published on this explicit theme

Thirty six submissions were received from fifteen countries with thirteen select papers and posters presented in the official program and in this publication Surveying and Mapping, 1980 *Advances in Applied Digital Human Modeling and Simulation* Vincent G. Duffy, 2016-07-26 This book focuses on the predictive capabilities derived from digital representation of humans in simulation or virtual environments It reports on models that facilitate prediction of safety and performance and describes both innovative visualization techniques as well as the underlying mathematics and science Contributions cover a wealth of topics including simulation tools and platforms virtual interactive design model optimization methods ontologies and knowledge based decision support human computer interaction human augmentation and many others The book gives special emphasis to cutting edge simulation applications of human system modeling and optimization including aviation manufacturing and service industries automotive design product design healthcare sustainability and emergency management Based on the AHFE 2016 International Conference on Digital Human Modeling and Simulation held on July 27 31 2016 in Walt Disney World Florida USA it is intended as timely survey for researchers engineers designers applied mathematicians and practitioners working in the field of Human Factors and Ergonomics **Re-Presenting the Past** Sheila Bonde, Stephen Houston, 2013-07-01 The archaeological past exists for us through intermediaries Some are written works descriptions narratives and field notes while others are visual the drawings paintings photographs powerpoints or computer visualizations that allow us to re present past forms of human existence This volume brings together nine papers six of which were presented at a symposium hosted at Brown University Two papers explore the classical past and medieval visualizations Three treat the Maya and one considers the imaging by eighteenth century antiquarians of British history yet another ranges broadly in its historical considerations Several consider the trajectory over time of visualization and self imaging Others engage with issues of recording by looking for example at the ways in which nineteenth century excavation photographs can aid in the reconstruction of an inscription or by evaluating the process of mapping a site with ArcGIS and computer animation software All essays raise key questions about the function of re presentations of the past in current archaeological practice The Military Engineer, 1986 *Archaeology in the Lowland American Tropics* Peter W.
