S. Fauber, 2019-12-03 Before the invention of the telescope people used nothing more than their naked eye to fathom what took place in the visible sky So how did four men in the 1500 s though of different nationality age religion and class collaborate to discover that the Earth revolved around the Sun With this radical discovery that went against the Catholic Church they created our contemporary

world and with it the uneasy conditions of modern life *Heaven on Earth* is an intimate examination of a scientific family that of Nicolaus Copernicus Tycho Brahe Johannes Kepler and Galileo Galilei Fauber juxtaposes their work with insight into their personal lives and and political considerations which in turn shaped their pursuit of knowledge Uniquely he shows how their intergenerational collaboration was actually what made the scientific revolution possible Contrary to the competitive nature of research today collaboration was key to early discoveries These men related to one another via intellectual pursuit rather than blood calling each other brothers fathers and sons Filled with rich characters and sweeping history *Heaven on Earth* reveals how the connection between these pillars of intellectual history moved science forward and helped usherd the world into modernity

Simulation, Modeling, and Programming for Autonomous Robots Noriako Ando, Stephen Balakirsky, Thomas Hemker, Monica Reggiani, Oskar von Stryk, 2010-11-05 Why are the many highly capable autonomous robots that have been promised for novel applications driven by society industry and research not available day despite the tremendous progress in robotics science and systems achieved during the last decades Unfortunately steady improvements in speci c robot abilities and robot hardware have not been matched by corresponding robot performance in real world environments This is mainly due to the lack of vancements in robot software that master the development of robotic systems of ever increasing complexity In addition fundamental open problems are still awaiting sound answers while the development of new robotics applications s fers from the lack of widely used tools libraries and algorithmsthatare designed in a modular and performant manner with standardized interfaces Simulation environments are playing a major role not only in reducing development time and cost e g by systematic software or hardware in the loop testing of robot performance but also in exploring new types of robots and applications H ever their use may still be regarded with skepticism Seamless migration of code using robot simulators to real world systems is still a rare circumstance due to the complexity of robot world sensor and actuator modeling These

challenges drive the quest for the next generation of methodologies and tools for robot development The objective of the International Conference on Simulation Modeling and Programming for Autonomous Robots SIMPAR is to offer a unique forum for these topics and to bring together researchers from academia and industry to identify and solve the key issues necessary to ease the development of increasingly complex robot software
