The Vital Question Energy Evolution And The Origins Of Complex Life:

The Vital Question Nick Lane, 2015 A biochemist building on the pillars of evolutionary theory and drawing on cutting edge research into the link between energy and genes argues that the evolution of multicellular life was the result of a single event

The Vital Question Nick Lane, 2016 A game changing book on the origins of life called the most important scientific discovery since the Copernican revolution in *The Observer*

Vital Question Nick Lane, 2015-07-13 One of the deepest most illuminating books about the history of life to have been published in recent years *The Economist* The Earth teems with life in its oceans forests skies and cities Yet there s a black hole at the heart of biology We do not know why complex life is the way it is or for that matter how life first began In *The Vital Question* award winning author and biochemist Nick Lane radically reframes evolutionary history putting forward a solution to conundrums that have puzzled generations of scientists For two and a half billion years from the very origins of life single celled organisms such as bacteria evolved without changing their basic form Then on just one occasion in four billion years they made the jump to complexity All complex life from mushrooms to man shares puzzling features such as sex which are unknown in bacteria How and why did this radical transformation happen The answer Lane argues lies in energy all life on Earth lives off a voltage with the strength of a lightning bolt Building on the pillars of evolutionary theory Lane s hypothesis draws on cutting edge research into the link between energy and cell biology in order to deliver a compelling account of evolution from the very origins of life to the emergence of multicellular organisms while offering deep insights into our own lives and deaths Both rigorous and enchanting *The Vital Question* provides a solution to life s vital question why are we as we are and indeed why are we here at all

The Vital Question: Energy, Evolution, and the Origins of Complex Life Bridgette O. Robles, 2024-10-24 Explore the fascinating journey of life s origins from the formation of Earth to the emergence of complex cells and the search for extraterrestrial life Delve into prebiotic chemistry the RNA world and the evolution of prokaryotic and eukaryotic cells Learn about extinction events survival strategies and the possibilities of life beyond Earth Discover how synthetic biology and bioengineering are shaping the future of origin of life research Embark on an enlightening exploration of the mysteries of life with this insightful book

Energy and Change Clayton Crockett, 2022-09-27 As humanity continues to consume planetary resources at an unsustainable rate we require not only new and renewable forms of energy but also new ways of understanding energy itself Clayton Crockett offers an innovative philosophy of energy that cuts across a number of leading edge disciplines Drawing from contemporary philosophies of New Materialism non Western traditions and the sciences he develops a comprehensive vision of energy as a material process spanning physics biology politics ecology and religion Crockett argues that change is foundational to material reality which is ceaselessly self organizing We can observe energy s effects in the operations of natural selection as well as those at work in human societies Matter and energy are not an oppositional binary rather they are expressions of how change functions in the universe Ultimately Crockett argues we can

conceive of God neither as a deity nor as a being but as the principle of change Informed by cutting edge theoretical discourses in thermodynamics science studies energy humanities systems theory continental philosophy and radical theology *Energy and Change* draws on theorists such as Gilles Deleuze Catherine Malabou Slavoj Žižek Karen Barad Bruno Latour and Kojin Karatani as well as ideas about spirituality society and nature from Amerindian Vodou and Neo Confucian traditions A foundational work in New Materialist philosophy of religion this book offers compelling new insights into the structure of the cosmos and our place in it

Energy and Evolutionary Conflict Neil W. Blackstone, 2022-07-06 In the mid to late twentieth century large scientific conflicts flared in two seemingly distinct fields of scientific inquiry In bioenergetics which examines how organisms obtain and utilize energy the chemiosmotic hypothesis of Mitchell suggested a novel mechanism for energy conversion In evolutionary biology meanwhile Wynne Edwards strongly articulated the view that organisms may act for the good of the group This work crystalized a long history of imprecise thinking about the evolution of cooperation While both controversies have received ample attention no one has ever suggested that one might inform the other i.e. that energy metabolism in general and chemiosmosis in particular might be relevant to the evolution of cooperation The central idea is nevertheless remarkably simple Chemiosmosis rapidly converts energy and once storage capacity is exceeded an overabundance of product has various negative consequences While to some extent chemiosmotic processes can be modulated under certain circumstances it is also possible to simply disperse the products into the environment This book argues that these two heretofore distinct scientific disciplines are connected thereby suggesting that a ubiquitous process of energy conversion may underlie the evolution of cooperation and link major transitions in the history of life that have been regarded as mechanistically unrelated

Transformer Nick Lane, 2022-07-12 From the renowned biochemist and author of The Vital Question an illuminating inquiry into the Krebs cycle and the origins of life Nick Lane s exploration of the building blocks that underlie life s big fundamental questions the origin of life itself aging and disease have shaped my thinking since I first came across his work He is one of my favorite science writers Bill Gates What brings the Earth to life and our own lives to an end For decades biology has been dominated by the study of genetic information Information is important but it is only part of what makes us alive Our inheritance also includes our living metabolic network a flame passed from generation to generation right back to the origin of life In Transformer biochemist Nick Lane reveals a scientific renaissance that is hiding in plain sight how the same simple chemistry gives rise to life and

causes our demise Lane is among the vanguard of researchers asking why the Krebs cycle the perfect circle at the heart of metabolism remains so elusive more than eighty years after its discovery Transformer is Lane s voyage as a biochemist to find the inner meaning of the Krebs cycle and its reverse why it is still spinning at the heart of life and death today Lane reveals the beautiful violent world within our cells where hydrogen atoms are stripped from the carbon skeletons of food and fed to the ravenous beast of oxygen Yet this same cycle spinning in reverse also created the chemical building blocks that enabled the emergence of life on our planet Now it does both How can the same pathway create and destroy What might our study of the Krebs cycle teach us about the mysteries of aging and the hardest problem of all consciousness Transformer unites the story of our planet with the story of our cells what makes us the way we are and how it connects us to the origin of life Enlivened by Lane s talent for distilling and humanizing complex research Transformer offers an essential read for anyone fascinated by biology s great mysteries Life is at root a chemical phenomenon this is its deep logic **Oxygen** Nick Lane,2002-09-26 Oxygen has had extraordinary effects on life Three hundred million years ago in Carboniferous times dragonflies grew as big as seagulls with wingspans of nearly a metre Researchers claim they could have flown only if the air had contained more oxygen than today probably as much as 35 per cent Giant spiders tree ferns marine rock formations and fossil charcoals all tell the same story High oxygen levels may also explain the global firestorm that contributed to the demise of the dinosaurs after the asteroid impact The strange and profound effects that oxygen has had on the evolution of life pose a riddle which this book sets out to answer Oxygen is a toxic gas Divers breathing pure oxygen at depth suffer from convulsions and lung injury Fruit flies raised at twice normal atmospheric levels of oxygen live half as long as their siblings Reactive forms of oxygen known as free radicals are thought to cause ageing in people Yet if atmospheric oxygen reached 35 per cent in the Carboniferous why did it promote exuberant growth instead of rapid ageing and death Oxygen takes the reader on an enthralling journey as gripping as a thriller as it unravels the unexpected ways in which oxygen spurred the evolution of life and death The book explains far more than the size of ancient insects it shows how oxygen underpins the origin of biological complexity the birth of photosynthesis the sudden evolution of animals the need for two sexes the accelerated ageing of cloned animals like Dolly the sheep and the surprisingly long lives of bats and birds Drawing on this grand evolutionary canvas Oxygen offers fresh perspectives on our own lives and deaths explaining modern killer diseases why we age and what we can do about it Advancing revelatory new ideas following chains of evidence the book ranges through many disciplines from environmental sciences to molecular medicine The result is a captivating vision of contemporary science and a humane synthesis of our place in nature This remarkable book will redefine the way we think about the world *Power, Sex, Suicide* Nick Lane,2018-10-24 Mitochondria are tiny structures located inside our cells that carry out the essential task of producing energy for the cell They are found in all complex living things and in that sense they are fundamental for driving complex life on the planet But there is much more to them than that Mitochondria have their own

DNA with their own small collection of genes separate from those in the cell nucleus It is thought that they were once bacteria living independent lives Their enslavement within the larger cell was a turning point in the evolution of life enabling the development of complex organisms and closely related the origin of two sexes Unlike the DNA in the nucleus mitochondrial DNA is passed down exclusively or almost exclusively via the female line That s why it has been used by some researchers to trace human ancestry daughter to mother to Mitochondrial Eve Mitochondria give us important information about our evolutionary history And that s not all Mitochondrial genes mutate much faster than those in the nucleus because of the free radicals produced in their energy generating role This high mutation rate lies behind our ageing and certain congenital diseases The latest research suggests that mitochondria play a key role in degenerative diseases such as cancer through their involvement in precipitating cell suicide Mitochondria then are pivotal in power sex and suicide In this fascinating and thought provoking book Nick Lane brings together the latest research findings in this exciting field to show how our growing understanding of mitochondria is shedding light on how complex life evolved why sex arose why don t we just bud and why we age and die This understanding is of fundamental importance both in understanding how we and all other complex life came to be but also in order to be able to control our own illnesses and delay our degeneration and death Oxford Landmark Science books are must read classics of modern science writing which have crystallized big ideas and shaped the way we think *The International Standard Bible Encyclopaedia* James Orr,1915 Harper's New Monthly Magazine ,1915 Important American periodical dating back to 1850 **Harper's Magazine** ,1890 Important American periodical dating back to 1850 **Science** John Michels (Journalist),1918 Vols for 1911 13 contain the Proceedings of the Helminothological Society of Washington ISSN 0018 0120 1st 15th meeting **Harmsworth History of the World** Sir John Alexander Hammerton,1907
