Noise Daniel Kahneman,Olivier Sibony,Cass R. Sunstein,2021-05-18 NEW YORK TIMES BESTSELLER From the Nobel Prize winning author of Thinking Fast and Slow and the coauthor of Nudge a revolutionary exploration of why people make bad judgments and how to make better ones a tour de force New York Times Imagine that two doctors in the same city give different diagnoses to identical patients or that two judges in the same courthouse give markedly different sentences to people who have committed the same crime Suppose that different interviewers at the same firm make different decisions about indistinguishable job applicants or that when a company is handling customer complaints the resolution depends on who happens to answer the phone Now imagine that the same doctor the same judge the same interviewer or the same customer service agent makes different decisions depending on whether it is morning or afternoon or Monday rather than Wednesday These are examples of noise variability in judgments that should be identical In Noise Daniel Kahneman Olivier Sibony and Cass R Sunstein show the detrimental effects of noise in many fields including medicine law economic forecasting forensic science bail child protection strategy performance reviews and personnel selection Wherever there is judgment there is noise Yet most of the time individuals and organizations alike are unaware of it They neglect noise With a few simple remedies people can reduce both noise and bias and so make far better decisions Packed with original ideas and offering the same kinds of research based insights that made Thinking Fast and Slow and Nudge groundbreaking New York Times bestsellers Noise explains how and why humans are so susceptible to noise in judgment and what we can do about it **The Cambridge Handbook of Evolutionary Ethics** Michael Ruse,Robert J. Richards,2017-08-24 This book introduces readers to the application of evolutionary ideas to moral thinking and justification presenting contrasting perspectives on controversial issues **Taming Uncertainty** Ralph Hertwig,Timothy J. Pleskac,Thorsten Pachur,2019-08-13 An examination of the cognitive tools that the mind uses to grapple with uncertainty in the real world How do humans navigate uncertainty continuously making near effortless decisions and predictions even under conditions of imperfect knowledge high complexity

and extreme time pressure Taming Uncertainty argues that the human mind has developed tools to grapple with uncertainty Unlike much previous scholarship in psychology and economics this approach is rooted in what is known about what real minds can do Rather than reducing the human response to uncertainty to an act of juggling probabilities the authors propose that the human cognitive system has specific tools for dealing with different forms of uncertainty They identify three types of tools simple heuristics tools for information search and tools for harnessing the wisdom of others This set of strategies for making predictions inferences and decisions constitute the mind's adaptive toolbox The authors show how these three dimensions of human decision making are integrated and they argue that the toolbox its cognitive foundation and the environment are in constant flux and subject to developmental change They demonstrate that each cognitive tool can be analyzed through the concept of ecological rationality that is the fit between specific tools and specific environments

Chapters deal with such specific instances of decision making as food choice architecture intertemporal choice financial uncertainty pedestrian navigation and adolescent behavior

Straight Choices Ben R. Newell, David A. Lagnado, David R. Shanks, 2022-05-19 Straight Choices provides a fascinating introduction to the psychology of decision making enhanced by discussion of relevant examples of decision problems faced in everyday life Thoroughly revised and updated throughout this edition provides an integrative account of the psychology of decision making and shows how psychological research can help us understand our uncertain world The book emphasizes the relationship between learning and decision making arguing that the best way to understand how and why decisions are made is in the context of the learning and knowledge acquisition which precedes them and the feedback which follows The mechanisms of learning and the structure of environments in which decisions are made are carefully examined to explore their impact on our choices The authors then consider whether we are all constrained to fall prey to cognitive biases or whether with sufficient exposure we can find optimal decision strategies and improve our decision making This edition highlights advances made in judgment and decision making research with additional coverage of behavioral insights nudging artificial intelligence and explanation based decision making Written in a non technical manner this book is an essential read for all students and researchers in cognitive psychology behavioral economics and the decision sciences as well as anyone interested in the nature of decision making
