TV by Design Lynn Spigel, 2008 From the Publisher While critics have long disparaged commercial television as a vast wasteland TV has surprising links to the urbane world of modern art that stretch back to the 1950s and 60s during that era the rapid rise of commercial television coincided with dynamic new movements in the visual arts a potent combination that precipitated a major shift in the way Americans experienced the world visually TV by Design uncovers this captivating story of how modernism and network television converged and intertwined in their mutual ascent during the decades of the cold war Whereas most histories of television focus on the way older forms of entertainment were recycled for the new medium Lynn Spigel shows how TV was instrumental in introducing the public to the latest trends in art and design Abstract expressionism pop art art cinema modern architecture and cutting edge graphic design were all mined for staging techniques scenic designs and an ever growing number of commercials As a result TV helped fuel the public craze for trendy modern products such as tailfin cars and boomerang coffee tables that was vital to the burgeoning postwar economy And along with influencing the look of television many artists including Eero Saarinen Ben Shahn Saul Bass William Golden and Richard Avedon also participated in its creation as the networks put them to work designing everything from their corporate headquarters to their company cufflinks Dizzy Gillespie Ernie Kovacs Duke Ellington and Andy Warhol all stop by in this imaginative and winning account of the ways in which art television and commerce merged in the first decades of the TV age

Williams,2013-03-14 Pharmacometrics is the science of interpreting and describing pharmacology in a quantitative fashion The pharmaceutical industry is integrating pharmacometrics into its drug development program but there is a lack of and need for experienced pharmacometricians since fewer and fewer academic programs exist to train them Pharmacometrics The Science of Quantitative Pharmacology lays out the science of pharmacometrics and its application to drug development evaluation and patient pharmacotherapy providing a comprehensive set of tools for the training and development of pharmacometricians Edited and written by key leaders in the field this flagship text on pharmacometrics Integrates theory and practice to let the reader apply principles and concepts Provides a comprehensive set of tools for training and developing expertise in the pharmacometric field Is unique in including computer code information with the examples This volume is an invaluable resource for all pharmacometricians statisticians teachers graduate and undergraduate students in academia industry and regulatory agencies **Changing Television Environments** Manfred Tscheligi,Marianna Obrist,Arthur Lugmayr,2008-07-05 This book constitutes the refereed proceedings of the 6th European Conference on Interactive Television EuroITV 2008 held in Salzburg Austria in July 2008 The 42 revised full papers were carefully reviewed and selected from 156 submissions The contributions cover significant aspects of the interactive television domain including submissions on user studies technical challenges related to new developments as well as new kind of formats The papers are organized in topical sections on interactive TV interactive authoring personalisation and recommender systems mobile TV social TV new TV environments iTV architectures and systems user interfaces and interaction design user studies and accessibility Polymer Products D. Morton-Jones,2012-12-06 This book is derived from a recent project sponsored by the Polymer Engineering Directorate of the SERC and carried out at the University of Lancaster under the joint auspices of the Departments of Chemistry and Engineering The project set out to provide a novel type of teaching material for introducing polymers and their uses to students especially of engineering Case studies of real examples of polymers at work are used so the student or teacher can start with a successful and well designed product and

work backwards to its origins in the market in design and material selection and in the manufacturing process The philosophy is that such an approach captures interest right at the start by means of a real example and then retains it because of the relevance of the technical explanation This after all is what most of us do habitually we turn to examples to make our point The hope is that subject matter with a somewhat notorious reputation among engineers such as aspects of polymer chemistry and the non linear behaviour of polymers under mechanical loading will be fairly painlessly absorbed through the context of the examples Each study becomes a separate chapter in the book The original studies and hence the present chapters vary in length because different topics demanded different approaches No attempt has been made to alter this or to adopt a standardized format because to have done so would have interfered with the vitality of the original work
