Emerging Technologies in Data Mining and Information Security Aboul Ella Hassanien,Siddhartha Bhattacharyya,Satyajit Chakrabati,Abhishek Bhattacharya,Soumi Dutta,2021-05-04 This book features research papers presented at the International Conference on Emerging Technologies in Data Mining and

Information Security IEMIS 2020 held at the University of Engineering Management Kolkata India during July 2020 The book is organized in three volumes and includes high quality research work by academicians and industrial experts in the field of computing and communication including full length papers research in progress papers and case studies related to all the areas of data mining machine learning Internet of things IoT and information security Generative Methods for Social Media Analysis Stan Matwin, Aristides Milios, Paweł Prałat, Amilcar Soares, François Théberge, 2023-07-05 This book provides a broad overview of the state of the art of the research in generative methods for the analysis of social media data It especially includes two important aspects that currently gain importance in mining and modelling social media dynamics and networks The book is divided into five chapters and provides an extensive bibliography consisting of more than 250 papers After a quick introduction and survey of the book in the first chapter chapter 2 is devoted to the discussion of data models and ontologies for social network analysis Next chapter 3 deals with text generation and generative text models and the dangers they pose to social media and society at large Chapter 4 then focuses on topic modelling and sentiment analysis in the context of social networks Finally Chapter 5 presents graph theory tools and approaches to mine and model social networks Throughout the book open problems highlighting potential future directions are clearly identified The book aims at researchers and graduate students in social media analysis information retrieval and machine learning applications An Introduction to Data Francesco Corea, 2018-11-27 This book reflects the author's years of hands on experience as an academic and practitioner It is primarily intended for executives managers and practitioners who want to redefine the way they think about artificial intelligence AI and other exponential technologies Accordingly the book which is structured as a collection of largely self contained articles includes both general strategic reflections and detailed sector specific information More concretely it shares insights into what it means to work with AI and how to do it more efficiently what it means to hire a data scientist and what new roles there are in the field how to use AI in specific industries such as finance or insurance how AI interacts with other technologies such as blockchain and in closing a review of the use of AI in venture capital as well as a snapshot of acceleration programs for AI companies **Visual and Text Sentiment Analysis through Hierarchical Deep Learning Networks** Arindam Chaudhuri, 2019-04-06 This book presents the latest research on hierarchical deep learning for multi modal sentiment analysis Further it analyses sentiments in Twitter blogs from both textual and visual content using hierarchical deep learning networks hierarchical gated feedback recurrent neural networks HGFRNNs Several studies on deep learning have been conducted to date but most of the current methods focus on either only textual content or only visual content In contrast the proposed sentiment analysis model can be applied to any social blog dataset making the book highly beneficial for postgraduate students and researchers in deep learning and sentiment analysis The mathematical abstraction of the sentiment analysis model is presented in a very lucid manner The complete sentiments are analysed by combining text and visual prediction results The book's novelty lies in its development of innovative hierarchical recurrent

neural networks for analysing sentiments stacking of multiple recurrent layers by controlling the signal flow from upper recurrent layers to lower layers through a global gating unit evaluation of HGFRNNs with different types of recurrent units and adaptive assignment of HGFRNN layers to different timescales Considering the need to leverage large scale social multimedia content for sentiment analysis both state of the art visual and textual sentiment analysis techniques are used for joint visual textual sentiment analysis The proposed method yields promising results from Twitter datasets that include both texts and images which support the theoretical hypothesis

Twitter als Basis wissenschaftlicher Studien

Fabian Pfaffenberger, 2016-11-08 Dieses Buch ist eine Open Access Publikation unter einer CC BY NC 4.0 Lizenz Fabian

Pfaffenberger bewertet den wissenschaftlichen Nutzen von Twitter indem er mehrere gängige Erhebungs und Analysemethoden betrachtet Twitter ist mittlerweile eine beliebte Quelle für Studien obwohl der Kurznachrichtendienst nur bedingt für die Forschung geeignet ist Eine eingeschränkte Repräsentativität zeitlich begrenzte Datenverfügbarkeit und geringe Datenqualität mindern den wissenschaftlichen Nutzen Dennoch rückt Twitter aufgrund seiner gesellschaftlichen und medialen Relevanz sowie dessen Masse an frei verfügbaren Daten zunehmend in den Fokus der Wissenschaft

Mobile Data Mining

Yuan Yao, Xing Su, Hanghang Tong, 2018-10-31 This SpringerBrief presents a typical life cycle of mobile data mining applications including data capturing and processing which determines what data to collect how to collect these data and how to reduce the noise in the data based on smartphone sensors feature engineering which extracts and selects features to serve as the input of algorithms based on the collected and processed data model and algorithm design In particular this brief concentrates on the model and algorithm design aspect and explains three challenging requirements of mobile data mining applications energy saving personalization and real time Energy saving is a fundamental requirement of mobile applications due to the limited battery capacity of smartphones The authors explore the existing practices in the methodology level e.g. by designing hierarchical models for saving energy Another fundamental requirement of mobile applications is personalization Most of the existing methods tend to train generic models for all users but the authors provide existing personalized treatments for mobile applications as the behaviors may differ greatly from one user to another in many mobile applications The third requirement is real time That is the mobile application should return responses in a real time manner meanwhile balancing effectiveness and efficiency This SpringerBrief targets data mining and machine learning researchers and practitioners working in these related fields Advanced level students studying computer science and electrical engineering will also find this brief useful as a study guide

Low Resource Social Media Text Mining Shriphani Palakodety, Ashiqur R. KhudaBukhsh, Guha Jayachandran, 2021-10-01 This book focuses on methods that are unsupervised or require minimal supervision vital in the low resource domain. Over the past few years rapid growth in Internet access across the globe has resulted in an explosion in user generated text content in social media platforms. This effect is significantly pronounced in linguistically diverse areas of the world like South Asia where over 400 million people regularly access social media platforms. YouTube, Facebook and Twitter report a monthly active user base in excess of 200 million from this region. Natural language processing (NLP) research and publicly available resources such as models and corpora prioritize Web content authored primarily by a Western user base. Such content is authored in English by a user base fluent in the language and can be processed by a broad range of off the shelf NLP tools. In contrast text from linguistically diverse regions features high levels of multilinguality, code switching and varied language skill levels. Resources like corpora and models are also scarce. Due to these factors newer methods are needed to process such text. This book is designed for NLP practitioners well

versed in recent advances in the field but unfamiliar with the landscape of low resource multilingual NLP The contents of this book introduce the various challenges associated with social media content quantify these issues and provide solutions and intuition When possible the methods discussed are evaluated on real world social media data sets to emphasize their robustness to the noisy nature of the social media environment On completion of the book the reader will be well versed with the complexity of text mining in multilingual low resource environments will be aware of a broad set of off the shelf tools that can be applied to various problems and will be able to conduct sophisticated analyses of such text
