Kaur,2022-02-08 The book Coronavirus Therapeutics Volume II provides the most comprehensive review on contemporary knowledge on the consequences during the outbreak of Coronavirus This also describes the clinical features diagnostic evaluation and management of Coronavirus patients Using an integrative approach to the understanding of paradigm gap in host pathogen interaction studies to the management of Coronavirus patients in the Intensive Care Unit to the current challenges for the effective management of Coronavirus pandemic risk factors including diabetes hypertension obesity and repercussion on the central and peripheral nervous system Key basic and clinical research laboratories from major universities academic medical hospitals biotechnology and pharmaceutical laboratories around the world have contributed articles that review present research activity on the role of heat shock proteins in human diseases and importantly project the field into the future The book is a must read for graduate students medical students basic science researchers and postdoctoral scholars in the fields of Cancer Biology Oncology Cardiovascular Diseases Microbiology Inflammation Translational Medicine Clinical Research Biotechnology Cell Molecular Medicine Pharmaceutical Scientists and Researchers involved in Drug Discovery *Insights into Microbe-Microbe Interactions in Human Microbial Ecosystems: Strategies to be Competitive* Clara G. de los Reyes-Gavilán,Nuria Salazar,2016-12-01 All parts of our body having communication with the external environment such as the skin vagina the respiratory tract or the gastrointestinal tract are colonized by a specific microbial community The colon is by far the most densely populated organ in the human body The pool of microbes inhabiting our body is known as microbiota and their collective genomes as microbiome These microbial ecosystems regulate important functions of the host and their functionality and the balance among the diverse microbial populations is essential for the maintenance of a healthy status The impressive development in recent years of next generation sequencing NGS

methods have made possible to determine the gut microbiome composition This together with the application of other high throughput omic techniques and the use of gnotobiotic animals has greatly improved our knowledge of the microbiota acting as a whole In spite of this most members of the human microbiota are largely unknown and remain still uncultured The final functionality of the microbiota is depending not only on nutrient availability and environmental conditions but also on the interrelationships that the microorganisms inhabiting the same ecological niche are able to establish with their partners or with their potential competitors Therefore in such a competitive environment microorganisms have had to develop strategies allowing them to cope adapt or cooperate with their neighbors which may imply notable changes at metabolic physiological and genetic level The main aim of this Research Topic was to contribute to better understanding complex interactions among microorganisms residing in human microbial habitats
