Botnets Heli Tiirmaa-Klaar, Jan Gassen, Elmar Gerhards-Padilla, Peter Martini, 2013-06-29 Malware poses one of the major

threats to all currently operated computer systems The scale of the problem becomes obvious by looking at the global economic loss caused by different kinds of malware which is estimated to be more than US 10 billion every year Botnets a special kind of malware are used to reap economic gains by criminals as well as for politically motivated activities In contrast to other kinds of malware botnets utilize a hidden communication channel to receive commands from their operator and communicate their current status The ability to execute almost arbitrary commands on the infected machines makes botnets a general purpose tool to perform malicious cyber activities Botnets provides a comprehensive analysis of the topic and comprises both technical and non technical sections written by leading cybersecurity experts The non technical section addresses how botnet infrastructure could be exploited for national security and cybercrime purposes It approaches the subject as a public policy issue and analyzes the phenomenon of botnets from national security law enforcement and regulatory policy perspectives and makes recommendations for policy makers on different public policies highlighting the need for international response mechanisms The technical section provides insight into current botnet techniques and discusses state of the art countermeasures to combat the botnet threat in detail It includes new detection methods as well as different approaches to actively compromise running botnets

I Got 99 Problems But a Breach Ain't One! James Scott, 2017-07-21 Critical Infrastructure Information Security systems are failing under persistent adversarial efforts because too many organizations still depend on antiquated legacy systems un cyber hygienic personnel and devices that lack security by design The Frankensteined architectonic IoT microcosm of the prototypical critical infrastructure organization renders an infinite attack surface just begging to be exploited Security is an afterthought minimally implemented at the end of the development lifecycle with the last dregs of the budget in order to meet negligent check box compulsory requirements Meanwhile adversaries are ever evolving and always just one system away We exist in an age of the weaponization of everything This is not merely a cyberwar we are now in a state of cyber kinetic meta war There was no clear beginning and there will be no end The pervasiveness of the Internet of Things the ubiquity of artificial intelligence and machine learning systems and the emergence of the machine human convergence where users are perpetually interconnected with vulnerable systems only compounds the hyper evolving attack surface Data is turned against users in an information war where nation states and special interest groups use sold and stolen metadata from meta hording internet service providers and social media companies to psycho socio economically manipulate entire populations Dragnet surveillance capitalists such as Facebook Comcast AT T and Google unfortunately supply these manipulating adversaries with an endless supply of metadata for this information war against the American and European public Metadata and electronic health records may prove far more powerful and more damning than the data stolen in prolific breaches like OPM These data enabled the precision targeting of specific or niche user subsets such as critical infrastructure owners and operators Metadata is leveraged to psychographically compel targets to respond to malicious lures Real news mixed with fake news propaganda watering hole attacks SQL injections spear phishing emails social engineering campaigns and other vectors are all real threats to national security Executives adhering to minimalistic check box

frameworks or lobbying to minimize long overdue cybersecurity reformation are practicing little more than security theater. Stringent cybersecurity and cyber hygiene reform is essential to ensure national security and to safeguard democracy. I see the impossible work being done by my friends at the federal agencies, the Pentagon, NATO, Five Eyes, and the intelligence community. They recognize the threat surrounding each and every information system. Warfare no longer takes place solely on the battlefield. Battles are fought along multiple vectors through numerous campaigns in the physical, digital, and cultural theaters. It is time for the information security community to discard the shadow of ineffectiveness and ineptitude cast by the horde of capitalistic faux experts. The public and private sector need information security professionals capable of analyzing the hyper-evolving threat landscape, identifying emerging threats, mitigating risks, and remediating incidents in near real time using bleeding edge defense grade systems such as artificial intelligence and machine learning solutions instead of outdated perimeter and check box systems.

Metadata: The Most Potent Weapon in This Cyberwar: The New Cyber-Kinetic-Meta War James Scott, 2019-02-28. Metadata or data about data is collected and recorded to describe data, identify trends, administer algorithmic solutions, and model potential scenarios. When one understands how to make sense of seemingly random metadata or how to pair the data with other exfiltrated data pools, there are limitless possibilities for social engineering and cyber exploitation in attacks that weaponize psychographic and demographic Big Data algorithms. In this publication entitled *Metadata: The Most Potent Weapon in This Cyber War*, The New Cyber Kinetic Meta War AotH offers a rich analysis of this underreported threat to our National Security through a comprehensive assessment of how meta-exploits are hyper-evolving an already next generation adversarial landscape. This includes discussions on how dragnet surveillance and retroactive legislation impede cybersecurity. How S J Res 34 allows ISPs to undermine national security and privacy. How Meta-Exploits expedite nation state attacks on critical infrastructure. How Meta-Exploitation of Big data and metadata augments extremist recruiting. Of niche personnel enables cyber kinetic attacks. Unmasks users with psychographic and demographic algorithms. Transforms remote contractors into insider threats. Undermines Democratic institutions. Impedes financial systems. Precisely tailors disinformation and fake news. Disrupts energy systems. Can cripple the healthcare sector.

Big Data Technologies for Monitoring of Computer Security: A Case Study of the Russian Federation Sergei Petrenko, 2018-06-26. This timely book offers rare insight into the field of cybersecurity in Russia, a significant player with regard to cyber attacks and cyber war. *Big Data Technologies for Monitoring of Computer Security* presents possible solutions to the relatively new scientific technical problem of developing an early warning cybersecurity system for critically important governmental information assets. Using the work being done in Russia on new information security systems as a case study, the book shares valuable insights gained during the process of designing and constructing open segment prototypes of this system. Most books on cybersecurity focus solely on the technical aspects. But *Big Data Technologies for Monitoring of Computer Security* demonstrates that military and political considerations should be included as well. With a

broad market including architects and research engineers in the field of information security as well as managers of corporate and state structures including Chief Information Officers of domestic automation services CIO and chief information security officers CISO this book can also be used as a case study in university courses

This is how They Tell Me the World Ends Nicole Perlroth, Bloomsbury (Firm), 2021 WINNER OF THE FT McKINSEY BUSINESS BOOK OF THE YEAR AWARD 2021 The instant New York Times bestseller A Financial Times and The Times Book of the Year A terrifying exposé The Times Part John le Carr Spellbinding New Yorker We plug in anything we can to the internet We can control our entire lives economy and grid via a remote web control But over the past decade as this transformation took place we never paused to think that we were also creating the world's largest attack surface And that the same nation that maintains the greatest cyber advantage on earth could also be among its most vulnerable Filled with spies hackers arms dealers and a few unsung heroes This Is How They Tell Me the World Ends is an astonishing and gripping feat of journalism Drawing on years of reporting and hundreds of interviews Nicole Perlroth lifts the curtain on a market in shadow revealing the urgent threat faced by us all if we cannot bring the global cyber arms race to heel
