Intellectual Property European Consortium for Political Research. Joint Sessions of Workshops, 2009 We know much more about the global politics of intellectual property than we do about national political contests over the ownership of knowledge Haunss and Shadlen have identified this gap in the literature and have done a fine job of bringing together a set of essays that helps to fill this gap in our understanding of the multi layered nature of intellectual property politics Peter Drahos The Australian National University Canberra This thought provoking volume provides invaluable new insights and is a major contribution to the debate on the politics of intellectual property rights Duncan Matthews Queen Mary University of London UK This book offers empirical analyses of conflicts over the ownership control and use of knowledge and information in developed and developing countries Sebastian Haunss and Kenneth C Shadlen along with a collection of eminent contributors focus on how business organizations farmers social movements legal communities state officials transnational enterprises and international organizations shape IP policies in areas such as health information communication technologies indigenous knowledge genetic resources and many others The innovative and original chapters examine conflicts over the rules governing various dimensions of IP including patents copyrights traditional knowledge and biosafety regulations Written from a political perspective this book is a must read for political scientists sociologists and anthropologists who study IP and conflicts over property It is also an essential read for stakeholders in institutions NGOs and industry interested in knowledge governance and IP politics

Genetically Modified Democracy Aniket Aga, 2021-01-01 How the debate over genetically modified crops in India is transforming science and politics Genetically modified or transgenic crops are controversial across the world Advocates see such crops as crucial to feeding the world's growing population critics oppose them for pushing farmers deeper into ecological and economic distress and for shoring up the power of agribusinesses India leads the world in terms of the intensity of democratic engagement with transgenic crops Anthropologist Aniket Aga excavates the genealogy of conflicts of interest and disputes over truth that animate the ongoing debate in India around the commercial release of transgenic food crops The debate may well transform agriculture and food irreversibly in a country already witness to widespread agrarian distress and over 300 000 suicides by farmers in the last two decades Aga illustrates how state science and agrarian capitalism interact in novel ways to transform how democracy is lived and understood and sheds light on the dynamics of technological change in populous unequal polities

The Diffusion of Social Movements Rebecca Kolins Givan, Kenneth M. Roberts, Sarah A. Soule, 2010-07-19 It is widely recognized that social movements may spread or diffuse from one site to another Such diffusion however is a complex and multidimensional process that involves different actors networks and mechanisms This complexity has spawned a large body of literature on different aspects of the diffusion process yet a comprehensive framework remains an elusive target This book is a response to that need and its framework focuses on three basic analytical questions First what is being diffused Second how does diffusion occur Finally what is the impact of diffusion on organizational development and shifts in the scale of contentious politics This volume

suggests that diffusion is not a simple matter of political contagion or imitation rather it is a creative and strategic process marked by political learning adaptation and innovation

GMO Food David E. Newton, 2021-05-17 *GMO Food A Reference Handbook* offers an in depth discussion of genetically modified food It covers the history of opposition to regulation of and labeling of genetic modifications along with the potential benefits and harm involved *GMO Food A Reference Handbook* is intended to serve as a research guide for young adults in high school and beyond Students at all grade levels should be able to use the book as an introduction to the history of genetic engineering of organisms and the use of this technology for the development of new forms of crops and foods They will learn briefly about historic methods of plant and animal modification such as cross breeding and in more detail how discoveries since the late nineteenth century have greatly changed the process of plant and animal modification These discoveries include important steps forward in genetics biochemistry molecular biology genetic engineering and related fields They will also learn about the variety of social political philosophical economic and other issues that have arisen alongside these scientific advances as well as about some of the laws regulations and other solutions that have been developed for dealing with the range of attitudes about genetically modified foods The second edition covers developments since 2014

Biotechnology and Agricultural Development Rob Tripp, 2009-06-02 This book addresses the continuing controversy over the potential impact of genetically modified GM crops in developing countries Supporters of the technology claim it offers one of the best hopes for increasing agricultural production and reducing rural poverty while opponents see it as an untested intervention that will bring corporate control of peasant farming The book examines the issues by reviewing the experience of GM insect resistant cotton the most widely grown GM crop in developing countries The book begins with an introduction to agricultural biotechnology a brief examination of the history of cotton production technology and the institutions required to support that technology and a thorough review of the literature on the agronomic performance of GM cotton It then provides a review of the economic and institutional outcomes of GM cotton during the first decade of its use The core of the book is four country case studies based on original fieldwork in the principal developing countries growing GM cotton China India South Africa and Colombia The book concludes with a summary of the experience to date and implications for the future of GM crops in developing countries This review challenges those who have predicted technological failure by describing instances in which GM cotton has proven useful and has been enthusiastically taken up by smallholders But it also challenges those who claim that biotechnology can take the lead in agricultural development by examining the precarious institutional basis on which these hopes rest in most countries The analysis shows how biotechnology's potential contribution to agricultural development must be seen as a part of and often secondary to more fundamental policy change The book should be of interest to a wide audience concerned with agricultural development This would include academics in the social and agricultural sciences donor agencies and NGOs
