Tree Models Of Similarity And Association Quantitative Applications In The Social Sciences:

Tree Models of Similarity and Association James E. Corter, 1996 This book describes how matrices of similarities or associations among entities can be modelled using trees in order to explain some of the issues that arise in performing similarity relations analyses and interpreting the results correctly *Proceedings of the Nineteenth Annual Conference of the Cognitive Science Society* Michael G. Shafto, Pat Langley, 1997 This volume features the complete text of the material presented at the Nineteenth Annual Conference of the Cognitive Science Society Papers have been loosely grouped by topic and an author index is provided in the back As in previous years the symposium included an interesting mixture of papers on many topics from researchers with diverse backgrounds and different goals presenting a multifaceted view of cognitive science In hopes of facilitating searches of this work an electronic index on the Internet s World Wide Web is provided Titles authors and summaries of all the papers published here have been placed in an online database which may be freely searched by anyone You can reach the web site at www.csli.stanford.edu/cogsci97 **A Companion to Rock Art** Jo McDonald, Peter Veth, 2012-09-04 This unique guide provides an artistic and archaeological journey deep into human history exploring the petroglyphic and pictographic forms of rock art produced by the earliest humans to contemporary peoples around the world Summarizes the diversity of views on ancient rock art from leading international scholars Includes new discoveries and research illustrated with over 160 images including 30 color plates from major rock art sites around the world Examines key work of noted authorities e g Lewis Williams Conkey Whitley and Clottes and outlines new directions for rock art research Is broadly international in scope identifying rock art from North and South America Australia the Pacific Africa India Siberia and Europe Represents new approaches in the archaeological study of rock art exploring issues that include gender shamanism landscape identity indigeneity heritage and tourism as well as technological and methodological advances in rock art analyses Nonrecursive Causal Models William Dale Berry, 1984-07 The author defines the concept of identification and explains what goes wrong with some nonrecursive models to make them nonidentified He provides various tests which can be used to determine whether a nonrecursive model is identified and reviews common techniques for estimating the parameters of an identified model Multiple Correspondence Analysis Brigitte Le Roux, Henry Rouanet, 2010 Requiring no prior knowledge of correspondence analysis this text provides a nontechnical introduction to Multiple Correspondence Analysis MCA as a method in its own right The authors Brigitte Le Roux and Henry Rouanet present the material in a practical manner keeping the needs of researchers foremost in mind This supplementary text is appropriate for any graduate level intermediate or advanced statistics course across the social and behavioral sciences as well as for individual researchers Book Jacket **Complexity in Society: From Indicators Construction to their Synthesis** Filomena Maggino, 2017-07-27 This volume discusses the many recent significant developments and identifies important problems in the field of social indicators In the last ten years the methodology of multivariate analysis and

synthetic indicators construction significantly developed In particular starting from the classical theory of composite indicators many interesting approaches have been developed to overcome the weaknesses of composites This volume focuses on these recent developments in synthesizing indicators and more generally in quantifying complex phenomena **Social Network Analysis** David Knoke, Song Yang, 2008 Providing a general overview of fundamental theoretical and methodological topics with coverage in greater depth of selected issues the text covers various issues in basic network concepts data collection and network analytical methodology Applied Correspondence Analysis Sten-Erik Clausen, 1998-06 This volume provides readers with a simple non technical introduction to correspondence analysis CA a technique for summarizing the relationships among categorical variables in large tables It begins with the history and logic of CA The author shows readers the steps to the analysis category profiles and masses are computed the distances between these points calculated and the best fitting space of n dimensions located There are glossaries on appropriate programs from SAS and SPSS for doing CA and the book concludes with a comparison of CA and log linear models

Computer-Assisted Interviewing Willem E. Saris, 1991 This book forms a useful introduction to computer assisted interviewing The book offers useful practical tips for those previously involved in more traditional questionnaire design and gives examples of how questions can be adapted for use in computer assisted interviews Anyone who is already convinced that a computer assisted interview meets their data gathering needs will find the book a worthwhile addition to the literature on questionnaire design *International Journal of Nursing Studies* A practical and self contained manual for doing CADAC written by an author with a lot of experience in this field It also contains a helpful list of software firms with addresses and a good bibliography for further in depth work on the subject *Bulletin de Methodologie Sociologique* This is a useful resource for those wishing to explore CADAC techniques *British Journal of Mathematical and Statistical Psychology* Since survey research is a time consuming and involved process researchers have found the computer a boon for facilitating the recording and coding of survey responses As a result the use of computer assisted data collection CADAC is growing each year Aimed at aiding researchers in the improvement of their data s quality Computer Assisted Interviewing will help the reader identify the possibilities and difficulties that arise in computer assisted interviewing Using concrete examples from surveys the author annotates samples of actual research questionnaires so that the reader can compare the actual paper questionnaire against the extra statements needed for clear computer assisted interviewing In addition the book includes coverage of the extra possibilities that computer assisted interviewing has to offer to interviewer administered interviewing self administered interviewing and panel surveys and an overview of the important features to consider if one wants to purchase a CADAC program **Q Methodology** Bruce McKeown, Dan Thomas, 1988-03 Q Methodology defines the distinctive set of psychometric and operational principles which when combined with specialized statistical applications of correlation and factor analysis techniques provide researchers with a systematic and rigorously quantitative means for examining human

subjectivity Based on the premise that subjectivity is communicable and advanced from self reference the method s central concern is to ensure that self reference is preserved and not compromised or confused by external investigation The authors outline the appropriate principles techniques and procedures which advance this goal including data gathering statistics and small sample behavioral research

A Mathematical Primer for Social Statistics John Fox,2020-12-06 A Mathematical Primer for Social Statistics Second Edition presents mathematics central to learning and understanding statistical methods beyond the introductory level the basic language of matrices and linear algebra and its visual representation vector geometry differential and integral calculus probability theory common probability distributions statistical estimation and inference including likelihood based and Bayesian methods The volume concludes by applying mathematical concepts and operations to a familiar case linear least squares regression The Second Edition pays more attention to visualization including the elliptical geometry of quadratic forms and its application to statistics It also covers some new topics such as an introduction to Markov Chain Monte Carlo methods which are important in modern Bayesian statistics A companion website includes materials that enable readers to use the R statistical computing environment to reproduce and explore computations and visualizations presented in the text The book is an excellent companion to a math camp or a course designed to provide foundational mathematics needed to understand relatively advanced statistical methods

Gathering Social Network Data jimi adams,2019-06-03 test

Data Theory and Dimensional Analysis William G. Jacoby,1991 For many readers data theory is probably unfamiliar Data isn t usually the subject matter of theory in and of itself However in this volume William Jacoby introduces a theory of data idea It examines how real world observations are transformed into something to be analyzed that is data Jacoby explores some of the basic ideas of data theory and considers their implications for research strategies in the social sciences Like others in the series it is reassuringly slim It is intended for a general social science readership and is a worthwhile read even for experienced data analysts since it draws attention not only to often overlooked assumptions but also to often ignored analysis possibilities Telephone Surveys On the whole this book contains a lot of useful information Journal of Classification

Processing Data Linda Brookover Bourque,Virginia Clark,1992-06-06 This volume highlights the theory that decisions made during the design of a data collection instrument influence the kind of data and the format of the data that are available for analysis Opening with a discussion on the selection of the data collection technique s and how this impacts on data processing and the data for later analysis the book covers key issues such as should you create your own instrument for a questionnaire how do you test a questionnaire what are the characteristics of good data processing how to deal with missing data how to scale an evaluation and create subfiles for analysis In addition each major section concludes with examples and when appropriate directs the reader to commonly available computer software that can aid in data processing

Dynamic Modeling R. Robert Huckfeldt,Kenneth Ewart Boulding,Carol W. Kohfeld,Thomas W. Likens,1978 Outlines the theory behind and techniques for using dynamic modeling taking the reader through a series of

increasingly complex models At each step examples are used to clarify applications of different equation models

Basic Math for Social Scientists Timothy Hagle, 1995-06-29 Taking an informal approach Hagle presents a review of the basic mathematical concepts that underlie most quantitative analysis in the social sciences After an algebra review featuring sets and combinations Hagle discusses limits and continuity Calculus is presented next with an introduction to differential calculus Multivariate functions partial derivatives and integral calculus are discussed the author concludes with a discussion of matrix algebra Aimed at readers who have taken one or two courses in algebra this volume is packed with helpful definitions equations and examples as well as alternative notations A useful appendix of common math symbol and Greek letters is also included

Multiple Indicators John L. Sullivan, Stanley Feldman, 1979 SAGE provides a presentation and critique of the use of multiple measures of theoretical concepts for the assessment of validity using the multi trait multi method matrix and reliability using multiple indicators with a path analytic framework

Random Factors in ANOVA Sally Ann Jackson, Dale E. Brashers, 1994 The authors clearly explicate random effects analysis of variance ANOVA through several well chosen real life examples this is a neat little book Dayanand N Naik in Technometrics The authors offer a motivating discussion of research circumstances for which random factors may be particularly suitable and they define random factors more broadly and pragmatically than the traditional definition does on the basis of pure statistical sampling Random Factors in ANOVA will also probably be particularly useful to students who are not terribly quantitative in orientation because much of it strives to explain intuitively and verbally the relevant issues Journal of Marketing Research When and why are random factors other than subjects used How do you decide whether a factor is fixed or random Through the use of examples from management education political science and psychology Jackson and Brashers show the reader how to determine if a factor is random or fixed and how to deal in an analysis of variance ANOVA with random factors In addition they explore ways to incorporate random factors into an experimental design with other factors and discuss ways to adapt SAS and SPSSX for analyzing designs with random factors

Central Tendency and Variability Herbert Weisberg, 1992 Using a clear expository style that builds from simple to more complex topics Weisberg explains how to measure the centre and variation on a single variable Beginning with an exploration of how to measure variables with different numeric or non numeric properties the volume covers such important topics as ways to examine distributions of variables ways to measure the spread of a variable in order to see how much the values on the variable differ how to generalize the sample results to the population and the use of exploratory data analysis to measure centre and spread

Test Item Bias Steven J. Osterlind, 1983 A unique practical manual for identifying and analyzing item bias in standardized tests Osterlind discusses five strategies for detecting bias analysis of variance transformed item difficulties chi square item characteristic curve and distractor response He covers specific hypotheses under test for each technique as well as the capabilities and limitations of each strategy
