Andreev, Viachaslau Kabanau, Vladimir Vantsevich, 2010-09-07 With this book Prof Dr Vantsevich brings a tremendous contribution to the field of Automotive Transmission and Driveline Engineering including his innovative methods for optimum driveline synthesis as well as his experience with the development of various hardware solutions from the basic limited slip differentials to the most sophisticated mechatronic systems Dr Ing Mircea Gradu Director Transmission and Driveline Engineering Head Virtual Analysis Tools Chrysler Group LLC Now that vehicles with four and more driving wheels are firmly ensconced in the consumer market they must provide energy fuel saving benefits and improved operational quality including terrain mobility traction and velocity properties turnability and stability of motion A first of its kind resource Driveline Systems of Ground Vehicles Theory and Design presents a comprehensive and analytical treatment of driveline

research design and tests based on energy efficiency vehicle dynamics and operational properties requirements This volume addresses fundamental engineering problems including how to investigate the effect of different driveline systems on the properties of vehicles and how to determine the optimal characteristics of the driveline system and its power dividing units PDUs and design it for a specific vehicle to ensure high level of vehicle dynamics energy efficiency and performance The authors develop an analytical apparatus for math modeling of driveline systems that can be compiled from different types of PDUs They also introduce methodologies for the synthesis of optimal characteristics of PDUs for different types of vehicles Structured to be useful to engineers of all levels of experience university professors and graduate students the book is based on the R D projects conducted by the authors It explores intriguing engineering dilemmas such as how to achieve higher energy and fuel efficiency by driving either all the wheels or not all the wheels solve oversteering issues by managing wheel power distribution and many other technical problems

A Solar Car Primer Eric F. Thacher, 2003 In the quixotic quest to reduce air pollution and fuel cars with alternative sources instead of gas solar powered cars have emerged as one option Although disagreements abound about the feasibility and practicality of these vehicles this book presents the basics behind the idea of solar cars From the construction of the engine to raising funds the book is a valuable introduction to the present and future of the emission free automobile

Advanced Autonomous Vehicle Design for Severe Environments V.V. Vantsevich, M.V. Blundell, 2015-10-20 Classical vehicle dynamics which is the basis for manned ground vehicle design has exhausted its potential for providing novel design concepts to a large degree At the same time unmanned ground vehicle UGV dynamics is still in its infancy and is currently being developed using general analytical dynamics principles with very little input from actual vehicle dynamics theory This technical book presents outcomes from the NATO Advanced Study Institute ASI Advanced Autonomous Vehicle Design for Severe Environments held in Coventry UK in July 2014 The ASI provided a platform for world class professionals to meet and discuss leading edge research engineering accomplishments and future trends in manned and unmanned ground vehicle dynamics terrain mobility and energy efficiency The outcomes of this collective effort serve as an analytical foundation for autonomous vehicle design Topics covered include historical aspects pivotal accomplishments and the analysis of future trends in on and off road manned and unmanned vehicle dynamics terramechanics soil dynamic characteristics uncertainties and stochastic characteristics of vehicle environment interaction for agile vehicle dynamics modeling new methods and techniques in on line control and learning for vehicle autonomy fundamentals of agility and severe environments mechatronics and cyber physics issues of agile vehicle dynamics to design for control energy harvesting and cyber security and case studies of agile and inverse vehicle dynamics and vehicle systems design including optimisation of suspension and driveline systems The book targets graduate students who desire to advance further in leading edge vehicle dynamics topics in manned and unmanned ground vehicles PhD students continuing their research work and building advanced curricula in academia and industry and researchers in government agencies and
