the preliminary explorations that culminated in his most famous work *A Treatise on Electricity and Magnetism*. One of the nineteenth century's most significant papers, *A Dynamical Theory of the Electromagnetic Field*, appears here along with similarly influential expositions of Maxwell's dynamical theory of gases. The author's extensive range of interests is well represented from his discussions of color blindness and the composition of Saturn's rings to his essays on geometrical optics, ether, and protecting buildings from lightning. His less technical writings are featured as well, including items written for the *Encyclopedia Britannica* and *Nature* magazine, book reviews, and popular lectures.
