Theory And Observation In Ancient And Medieval Astronomy:

Theory and Observation in Ancient and Medieval Astronomy Bernard R. Goldstein, 1985 **Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures** Helaine Selin, 1997-07-31 The Encyclopaedia fills a gap in both the history of science and in cultural studies. Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works. The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures' science. Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas. The Western academic divisions of science, technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected. This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity. The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today. There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does.

xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa.

Ancient Astronomical Observations and the Study of the Moon's Motion (1691-1757) John M. Steele, 2012-02-17 The discovery of a gradual acceleration in the moon's mean motion by Edmond Halley in the last decade of the seventeenth century led to a revival of interest in reports of astronomical observations from antiquity. These observations provided the only means to study the moon's secular acceleration as this newly discovered acceleration became known. This book contains the first detailed study of the use of ancient and medieval astronomical observations in order to investigate the moon's secular acceleration from its discovery by Halley to the establishment of the magnitude of the acceleration by Richard Dunthorne, Tobias Mayer and Jérôme Lalande in the 1740s and 1750s. Making extensive use of previously unstudied manuscripts, this work shows how different astronomers used the same small body of preserved ancient observations in different ways in their work on the secular acceleration. In addition, this work looks at the wider context of the study of the moon's secular acceleration, including its use in debates of biblical chronology, whether the heavens were made up of ether and the use of astronomy in determining geographical longitude. It also discusses wider issues of the perceptions and knowledge of ancient and medieval astronomy in the early modern period. This book will be of interest to historians of astronomy, astronomers and historians of the ancient world.

From Eudoxus to Einstein C. M. Linton, 2004-08-12 Since man first looked towards the heavens a great deal of effort has been put into trying to predict and explain the motions of the sun, moon and planets. Developments in man's understanding have been closely linked to progress in the mathematical sciences. Whole new areas of mathematics such as trigonometry were developed to aid astronomical calculations and on numerous

occasions throughout history breakthroughs in astronomy have only been possible because of progress in mathematics This book describes the theories of planetary motion that have been developed through the ages beginning with the homocentric spheres of Eudoxus and ending with Einstein's general theory of relativity It emphasizes the interaction between progress in astronomy and in mathematics showing how the two have been inextricably linked since Babylonian times This valuable text is accessible to a wide audience from amateur astronomers to professional historians of astronomy **Studies on**

Lattis, 2010-12-15 Between Copernicus and Galileo is the story of Christoph Clavius the Jesuit astronomer and teacher whose work helped set the standards by which Galileo's famous claims appeared so radical and whose teachings guided the intellectual and scientific agenda of the Church in the central years of the Scientific Revolution Though relatively unknown today Clavius was enormously influential throughout Europe in the late sixteenth and early seventeenth centuries through his astronomy books the standard texts used in many colleges and universities and the tools with which Descartes Gassendi and Mersenne among many others learned their astronomy James Lattis uses Clavius's own publications as well as archival materials to trace the central role Clavius played in integrating traditional Ptolemaic astronomy and Aristotelian natural

philosophy into an orthodox cosmology Although Clavius strongly resisted the new cosmologies of Copernicus and Tycho Galileo's invention of the telescope ultimately eroded the Ptolemaic world view By tracing Clavius's views from medieval cosmology the seventeenth century Lattis illuminates the conceptual shift from Ptolemaic to Copernican astronomy and the social intellectual and theological impact of the Scientific Revolution

A Survey of European Astronomical Tables in the Late Middle Ages José Chabás, Bernard R. Goldstein, 2012-05-31 A Survey of European Astronomical Tables in the Late Middle Ages is a first attempt to classify and illustrate the numerous astronomical tables compiled from about the 10th century to the early 16th century in the Latin West The compilation of astronomical tables was a major and dynamic intellectual enterprise These tables respond to a wide variety of astronomical problems and computational needs and contain a large number of ingenious solutions proposed by astronomers over the centuries In the absence of algebraic notation and mathematical graphing techniques a table was often the best way to transmit precise information to the reader Indeed an astronomical table is not a just a list of data but a structured way to present numerical information of astronomical interest the whole book which is an excellent guide for all those who are interested in the history of medieval European astronomy and especially in medieval astronomical tables Julio Sams University of Barcelona

Cometary Theory in Fifteenth-Century Europe Jane L. Jervis, 1985-10-31

Judaism and the Doctrine of Creation Norbert M. Samuelson, 1994-11-24 The topic of this book is creation It breaks down into discussions of two distinct but interrelated questions what does the universe look like and what is its origin The opinions about creation considered by Norbert Samuelson come from the Hebrew scriptures Greek philosophy Jewish philosophy and contemporary physics His perspective is Jewish liberal and philosophical It is Jewish because the foundation of the discussion is biblical texts interpreted in the light of traditional rabbinic texts It is philosophical because the subject matter is important in both past and present philosophical texts and to Jewish philosophy in particular Finally it is liberal because the authorities consulted include heterodox as well as orthodox Jewish sources The ensuing discussion leads to original conclusions about a diversity of topics including the limits of human reason and religious faith and the relevance of scientific models to religious doctrine
