Therapeutic Exercises For Children Guided Self Discovery Using Cognitive Behavioral Techniques:

Therapeutic Exercises for Children Robert D. Friedberg, Lori E. Crosby, 2001 *Therapeutic Exercises for Children* presents an empirically supported program for helping anxious and depressed children ages 8 to 11. The Professional Guide provides specific recommendations for implementing this cognitive behavioral program including suggestions for selecting and individualizing the workbook exercises to meet the specific needs of different children and groups of children. Also discusses theoretical and clinical issues related to the treatment of anxious and depressed children including indications, contraindications for using these techniques and cultural adaptations. This program makes therapy fun for children by balancing the teaching of new coping skills with coaching to help them experientially apply these skills to highly personalized events in their day to day lives. Also includes suggestions for working with parents, conducting school based groups and numerous references. The Guided Self Discovery Workbook contains 18 exercises which focus on specific cognitive behavioral skill sets for increasing the coping skills of depressed and anxious children. Each exercise contains Guidelines for Therapists, Tips for Children and the exercise itself. The exercises can be photocopied and adapted for use with your clients in both individual and group treatment. These exercises guide children in identifying their stressors, encourage active experimentation with new ways of thinking and doing and help them develop new skills for effectively dealing with events in their lives. *Resumé* *Clinical Practice of Cognitive Therapy with Children and Adolescents, Second Edition* Robert D.
