Thermal Characterization Of Polymeric Materials Vol 1 2nd Edition:

Thermal Characterization of Polymeric Materials Edith Turi, 2012-12-02 Thermal Characterization of Polymeric Materials is a critical review and a concise evaluation of the application of thermal analysis in polymer science and engineering This book is divided into nine chapters that specifically tackle the instrumentation theory and a wide variety of applications of thermal characterization The introductory chapters provide an overview of all aspects of thermal analytical methods and apparatus and the theory underlying the basic principles of thermal analysis These chapters also examine the theories and functions of state for thermometry dilatometry thermomechanical analysis calorimetry thermogravimetry These topics are followed by a discussion on single component and multicomponent systems and their phase transitions as influenced by concentration pressure deformation molecular weight and copolymerization The subsequent chapters explore the influence of important chemical and physical parameters on the glass transition crystallization and melting of thermoplastic materials The discussion then shifts to the theoretical aspects of polymer polymer compatibility phase separation and miscibility in mixed polymer systems This book further considers the thermal analysis in thermosets elastomers and fibers The concluding chapters present the methods of obtaining information on the relative flammability properties of polymers for screening fire retardant additives and for studying the mechanism of flame inhibition These chapters also look into the thermal analysis of antioxidants stabilizers lubricants plasticizers impact modifiers and fire retardants Polymer scientists and researchers will find this book invaluable

Thermal Analysis of Polymers M. P. Sepe, 1997 The techniques which are particularly relevant to polymer characterisation are evaluated in this new report For each technique the author describes the method of operation and the output obtained and then considers its application to polymer characterisation An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading
