Von Braun Dreamer Of Space Engineer Of War:

Von Braun Michael Neufeld, 2008-11-11 Curator and space historian at the Smithsonian's National Air and Space Museum delivers a brilliantly nuanced biography of controversial space pioneer Wernher von Braun Chief rocket engineer of the Third Reich and one of the fathers of the U S space program Wernher von Braun is a source of consistent fascination Glorified as a visionary and vilified as a war criminal he was a man of profound moral complexities whose intelligence and charisma were coupled with an enormous and some would say blinding ambition Based on new sources Neufeld's biography delivers a meticulously researched and authoritative portrait of the creator of the V 2 rocket and his times detailing how he was a man caught between morality and progress between his dreams of the heavens and the earthbound realities of his life

Our Germans Brian E. Crim, 2018-01-15 As this engaging book demonstrates whether characterized as an expedient Cold War program born from military necessity or a dishonorable episode the project ultimately reflects American ambivalence about the military industrial complex and the viability of an ends justifies the means solution to external threats

The Women of the Moon Daniel R. Altschuler, Fernando J. Ballesteros, 2019-07-04 Philosophers and poets in times past tried to figure out why the stainless moon smoothly polished like a diamond in Dante's words had stains The agreed solution was that like a mirror it reflected the imperfect Earth Today we smile but it was a clever way to understand the Moon in a manner that was consistent with the beliefs of their age The Moon is no longer the thing we see it as often as the Sun and give it little thought we've become indifferent However the Moon does reflect more than just sunlight The Moon or more precisely the nomenclature of lunar craters still holds up a mirror to an important aspect of human history Of the 1586 craters that have been named honoring philosophers and scientists only 28 honor a woman These 28 women of the Moon present us with an opportunity to meditate on this gap but perhaps more significantly they offer us an opportunity to talk about their lives mostly unknown today

The Province of All Mankind Stephen Bueno, 2025-07-15 The Province of All Mankind is the story of a powerful idea about the cosmos Born in the science fiction literature of the nineteenth century and maturing in the Age of Apollo this idea held that outer space should be preserved as a sanctuary from human strife free from weapons warfare and political rivalry If humanity could somehow leave violence behind as it moved into space perhaps peace would finally reign Bucking a half century of space race scholarship Stephen Bueno argues that despite waging a totalizing Cold War the United States achieved stunning diplomatic successes that heralded the cosmos as a realm of peace and cooperation The early story of space politics is not primarily one of militarization but rather of political prescience and restraint The Province of All Mankind demonstrates that space became a unique domain of American foreign relations and international law and provides lessons for the Second Cold War unfolding over the horizon

Imagining Outer Space Alexander C.T. Geppert, 2018-04-25 Imagining Outer Space makes a captivating advance into the cultural history of outer space and extraterrestrial life in the European imagination How was outer space conceived and communicated What

promises of interplanetary expansion and cosmic colonization propelled the project of human spaceflight to the forefront of twentieth century modernity In what way has West European astroculture been affected by the continuous exploration of outer space Tracing the thriving interest in spatiality to early attempts at exploring imaginary worlds beyond our own the book analyzes contact points between science and fiction from a transdisciplinary perspective and examines sites and situations where utopian images and futuristic technologies contributed to the omnipresence of fantasmatic thought Bringing together state of the art work in this emerging field of historical research the volume breaks new ground in the historicization of the Space Age

For the Love of Mars Matthew Shindell, 2023-05-18 A tour of Mars in the human imagination from ancient astrologers to modern explorers Mars and its secrets have fascinated and mystified humans since ancient times Due to its vivid color and visibility its geologic kinship with Earth and its potential as our best hope for settlement Mars embodies everything that inspires us about space and exploration For the Love of Mars surveys the red planet s place in the human imagination beginning with ancient astrologers and skywatchers and ending in our present moment of exploration and virtual engagement National Air and Space Museum curator Matthew Shindell describes how historical figures across eras and around the world have made sense of this mysterious planet We meet Mayan astrologer priests who incorporated Mars into seasonal calendars and religious ceremonies Babylonian astrologers who discerned bad omens figures of the Scientific Revolution who struggled to comprehend it as a world Victorian astronomers who sought signs of intelligent life and twentieth and twenty first century scientists who have established a technological presence on its surface Along the way we encounter writers and artists from each of these periods who take readers and viewers along on imagined journeys to Mars By focusing on the diverse human stories behind the telescopes and behind the robots we know and love Shindell shows how Mars exploration has evolved in ways that have also expanded knowledge about other facets of the universe Captained by an engaging and erudite expert For the Love of Mars is a captivating voyage through time and space for anyone curious about Curiosity and the red planet

Remembering the Space Age Steven J. Dick, 2008 From the Publisher Proceedings of October 2007 conference sponsored by the NASA History Division and the National Air and Space Museum to commemorate the 50th anniversary of the Sputnik 1 launch in October 1957 and the dawn of the space age

Remembering the space age: Proceedings of the 50th Anniversary Conference , *We Could Not Fail* Richard Paul, Steven Moss, 2015-05-01 This surprising and insightful history profiles ten African American engineers mathematicians and others who worked for NASA s space program Lauren Helmuth New York Times Book Review The Space Age began just as the struggle for civil rights forced Americans to confront the bitter legacy of slavery discrimination and violence against African Americans NASA itself became an agent of social change with President Kennedy opening its workplaces to African Americans In *We Could Not Fail* Richard Paul and Steven Moss profile ten pioneer African American space workers whose stories illustrate the role NASA and the space program played in promoting civil rights Paul and Moss recount how these

technicians mathematicians engineers and an astronaut candidate surmounted barriers and navigated being the sole African American in a NASA work group These brave and determined men went on to help transform Southern society by integrating colleges patenting new inventions holding elective office and reviving and governing defunct towns Adding new names to the roster of civil rights heroes and a new chapter to the story of space exploration We Could Not Fail demonstrates how African Americans broke the color barrier by competing successfully at the highest level of American intellectual and technological achievement

Robots In Space Roger D. Launius, Howard E. McCurdy, 2008-02-11 A look into the history of space exploration and its possible future and just where exactly robotics fit into it all Given the near incomprehensible enormity of the universe it appears almost inevitable that humankind will one day find a planet that appears to be much like the Earth This discovery will no doubt reignite the lure of interplanetary travel Will we be up to the task And given our limited resources biological constraints and the general hostility of space what shape should we expect such expeditions to take In Robots in Space Roger Launius and Howard McCurdy tackle these questions with rigorous scholarship and disciplined imagination jumping comfortably among the worlds of rocketry engineering public policy and science fantasy to expound upon the possibilities and improbabilities involved in trekking across the Milky Way and beyond They survey the literature fictional as well as academic studies and outline the progress of space programs in the United States and other nations They also assess the current state of affairs to offer a conclusion startling only to those who haven't spent time with Asimov Heinlein and Clarke to traverse the cosmos humans must embrace and entwine themselves with advanced robotic technologies 2008 Outstanding Academic Title Choice Magazine Praise for Robots in Space This short volume manages to capture the history of U S space flight to explain the underpinnings of U S space policy and to plot out the possibilities for our future in space in a style that most anyone can enjoy Andrew McMichael Park City Daily News

The Future of Humanity Michio Kaku, 2019-04-02 NEW YORK TIMES BESTSELLER The national bestselling author of The God Equation traverses the frontiers of astrophysics artificial intelligence and technology to offer a stunning vision of man's future in space from settling Mars to traveling to distant galaxies Amazing Kaku is in smooth perfect control of it the entire time The Christian Science Monitor We are entering a new Golden Age of space exploration With irrepressible enthusiasm and a deep understanding of the cutting edge research in space travel world renowned physicist and futurist Dr Michio Kaku presents a compelling vision of how humanity may develop a sustainable civilization in outer space He reveals the developments in robotics nanotechnology and biotechnology that may allow us to terraform and build habitable cities on Mars and beyond He then journeys out of our solar system and discusses how new technologies such as nanoships laser sails and fusion rockets may actually make interstellar travel a possibility We travel beyond our galaxy and even beyond our universe as Kaku investigates some of the hottest topics in science today including warp drive wormholes hyperspace parallel universes and the multiverse Ultimately he shows us how humans may someday achieve a form of immortality and be able to leave our

bodies entirely laser porting to new havens in space Gender and the Race for Space Erinn McComb,2025-06-10 The American astronaut image was informed by early Cold War ideals of masculinity that helped mold a distinctly American anti communist masculinity which appeared on the surface anyway to resolve not only an American crisis of masculinity but helped win the Cold War on an ideological and popular level This American image focused on strict gender binaries of man as the protector controlling technology and containing communism while woman was the passive actor with spaceflight technology left behind in the home waiting for the return of the astronaut husband Allowing women to fly into space would have represented a lack of individual control with spaceflight technology Space Force! Taylor Dinerman,2021-09-14 The desire to establish a US Space Force has been around for decades in both science fiction and in the minds of people who attempt to seriously consider what our nation needs in order to deter future wars and if necessary to fight and win them As an institution the US Space Force has gotten off to a shaky start however prolific space writer Taylor Dinerman has great confidence that someday soon it will find the right leadership and eventually be emancipated from the Department of the Air Force At that point the institution can begin to truly serve the great cause of creating a spacefaring civilization as it was always meant to British Exploitation of German Science and Technology, 1943-1949 Charlie Hall,2019-01-16 At the end of the Second World War Germany lay at the mercy of its occupiers all of whom launched programmes of scientific and technological exploitation Each occupying nation sought to bolster their own armouries and industries with the spoils of war and Britain was no exception Shrouded in secrecy yet directed at the top levels of government and driven by ingenuity from across the civil service and armed forces Britain made exploitation a key priority By examining factories and laboratories confiscating prototypes and blueprints and interrogating and even recruiting German experts Britain sought to utilise the innovations of the last war to prepare for the next This ground breaking book tells the full story of British exploitation for the first time sheds new light on the legacies of the Second World War and contributes to histories of intelligence science warfare and power in the midst of the twentieth century **The Hidden Nazi** Dean Reuter,Keith Chester,Colm Lowery,2019-10-08 He s the worst Nazi war criminal you ve never heard of Sidekick to SS Chief Heinrich Himmler and supervisor of Nazi rocket scientist Wernher von Braun General Hans Kammler was responsible for the construction of Hitler s slave labor sites and concentration camps He personally altered the design of Auschwitz to increase crowding ensuring that epidemic diseases would complement the work of the gas chambers Why has the world forgotten this monster Kammler was declared dead after the war But the aide who testified to Kammler s supposed suicide never produced the general s dog tags or any other proof of death Dean Reuter Colm Lowery and Keith Chester have spent decades on the trail of the elusive Kammler uncovering documents unseen since the 1940s and visiting the purported site of Kammler s death now in the Czech Republic Their astonishing discovery US government documents prove that Hans Kammler was in American custody for months after the war well after his officially declared suicide And what happened to him after that Kammler was kept out of

public view never indicted or tried but to what end Did he cooperate with Nuremberg prosecutors investigating Nazi war crimes Was he protected so the United States could benefit from his intimate knowledge of the Nazi rocket program and Germany's secret weapons The Hidden Nazi is true history more harrowing and shocking than the most thrilling fiction

Chasing the Moon Robert Stone, Alan Andres, 2019-06-04 JFK issued the historic moon landing challenge These are the stories of the visionaries who helped America complete his vision with the first lunar landing fifty years ago A Companion Book to the AMERICAN EXPERIENCE Film on PBS Going in depth to explore their stories beyond the PBS series writer producer Robert Stone called one of our most important documentary filmmakers by Entertainment Weekly brings these important figures to brilliant life In 1961 President John F Kennedy proposed the nation spend twenty billion dollars to land a man on the Moon before the end of the decade Based on eyewitness accounts and newly discovered archival material Chasing the Moon reveals for the first time the unknown stories of the fascinating individuals whose imaginative work across several decades culminated in America's momentous achievement More than a story of engineers and astronauts the moon landing now celebrating its fiftieth anniversary grew out of the dreams of science fiction writers filmmakers military geniuses and rule breaking scientists They include Science fiction author Arthur C Clarke whose writing inspired some of the key players in the Moon race A scientific paper he wrote in his twenties led to the U S beating Russia in one area of space communications satellites Wernher von Braun the former Nazi military genius who oversaw Hitler's rocket weapons program After working on ballistic missiles for the U S Army he was recruited by NASA to manage the creation of the Saturn V moon rocket Astronaut Frank Borman commander of the first mission to circumnavigate the Moon whose powerful testimony before Congress in 1967 decisively saved the U S lunar program from being cancelled Poppy Northcutt a young mathematician who was the first woman to work in Mission Control Her media exposure as a unique presence in this all male world allowed her the freedom to stand up for equal rights for women and minorities Edward Dwight an African American astronaut candidate recruited at the urging of the Kennedy White House to further the administration's civil rights agenda but not everyone welcomed his inclusion Setting these key players in the political social and cultural climate of the time and including captivating photographs throughout Chasing the Moon focuses on the science and the history but most important the extraordinary individuals behind what was undoubtedly the greatest human achievement of the twentieth century

The Ethics of Space Exploration James S.J. Schwartz, Tony Milligan, 2016-07-25 This book aims to contribute significantly to the understanding of issues of value including the ultimate value of space related activities which repeatedly emerge in interdisciplinary discussions on space and society Although a recurring feature of discussions about space in the humanities the treatment of value questions has tended to be patchy of uneven quality and even on occasion idiosyncratic rather than drawing upon a close familiarity with state of the art ethical theory One of the volume's aims is to promote a more robust and theoretically informed approach to the ethical dimension of discussions on space and society While the

contributions are written in a manner which is accessible across disciplines the book still withstands scrutiny by those whose work is primarily on ethics At the same time it allows academics across a range of disciplines an insight into current approaches toward how the work of ethics gets done The issues of value raised could be used to inform debates about regulation space law and protocols for microbial discovery as well as longer range policy debates about funding **Boom** Byrne Hobart,Tobias Huber,2024-11-19 A timely investigation of the causes of technological and scientific stagnation and a radical blueprint for accelerating innovation Read this book for the alternative history of our age Peter Thiel investor and author of Zero to One A must read for those who seek to build the future Marc Andreessen cofounder of Netscape and Andreessen Horowitz From the Moon landing to the dawning of the atomic age the decades prior to the 1970s were characterized by the routine invention of transformative technologies at breakneck speed By comparison ours is an age of stagnation Median wage growth has slowed inequality and income concentration are on the rise and scientific research has become increasingly expensive and incremental Why are we unable to replicate the rate of progress of past decades What can we do to reinvigorate innovation In Boom Byrne Hobart and Tobias Huber take an inductive approach to the problem In a series of case studies tracking some of the most significant breakthroughs of the past 100 years from the Manhattan Project and the Apollo program to fracking and Bitcoin they reverse engineer how transformative progress arises from small groups with a unified vision vast funding and surprisingly poor accountability They conclude that financial bubbles while often maligned as destructive and destabilizing forces have in fact been the engine of past breakthroughs and will drive future advances In other words Bubbles aren't all bad Integrating insights from economics philosophy and history Boom identifies the root causes of the Great Stagnation and provides a blueprint for accelerating innovation By decreasing collective risk aversion overfunding experimental processes and organizing high agency individuals around a transcendent mission bubbles are the key to realizing a future that is radically different from the present Boom offers a definite and optimistic vision of our future and a path to unleash a new era of global prosperity Breaking the Chains of Gravity Amy Shira Teitel,2015-10-22 The incredible story of spaceflight before the establishment of NASA NASA's history is a familiar story one that typically peaks with Neil Armstrong taking his small step on the Moon in 1969 But America's space agency wasn't created in a vacuum It was assembled from pre-existing parts drawing together some of the best minds the non-Soviet world had to offer In the 1930s rockets were all the rage in Germany the focus both of scientists hoping to fly into space and of the German armed forces looking to circumvent the restrictions of the Treaty of Versailles One of the key figures in this period was Wernher von Braun an engineer who designed the rockets that became the devastating V2 As the war came to its chaotic conclusion von Braun escaped from the ruins of Nazi Germany and was taken to America where he began developing missiles for the US Army Meanwhile the US Air Force was looking ahead to a time when men would fly in space and test pilots like Neil Armstrong were flying cutting edge rocket powered aircraft in the thin upper atmosphere Breaking the Chains of

Gravity tells the story of America's nascent space program its scientific advances its personalities and the rivalries it caused between the various arms of the US military At this point getting a man in space became a national imperative leading to the creation of the National Aeronautics and Space Administration otherwise known as NASA

The Archaeology of Science

Michael Brian Schiffer, 2013-04-19 This manual pulls together and illustrates with interesting case studies the variety of specialized and generalized archaeological research strategies that yield new insights into science Throughout the book there are templates consisting of questions to help readers visualize and design their own projects The manual seeks to be as general as possible applicable to any society and so science is defined as the creation of useful knowledge the kinds of knowledge that enable people to make predictions The chapters in Part I discuss the scope of the archaeology of science and furnish a conceptual foundation for the remainder of the book Next Part II presents several specialized but widely practiced research strategies that contribute to the archaeology of science In order to thoroughly ground the manual in real life applications Part III presents lengthy case studies that feature the use of historical and archaeological evidence in the study of scientific activities
