Time And Navigation The Untold Story Of Getting From Here To There:

Time and Navigation Andrew K. Johnston, Roger D. Connor, Carlene E. Stephens, Paul E. Ceruzzi, 2015-06-02 If you want to know where you are you need a good clock The surprising connection between time and place is explored in Time and Navigation The Untold Story of Getting from Here to There the companion book to the National Air and Space Museum exhibition of the same name Today we use smartphones and GPS but navigating has not always been so easy The oldest clock is Earth itself and the oldest means of keeping time came from observing changes in the sky Early mariners like the Vikings accomplished amazing feats of navigation without using clocks at all Pioneering seafarers in the Age of Exploration used dead reckoning and celestial navigation later innovations such as sextants and marine chronometers honed these techniques by measuring latitude and longitude When explorers turned their sights to the skies they built on what had been learned at sea For example Charles Lindbergh used a bubble sextant on his record breaking flights World War II led to the development of new flight technologies notably radio navigation since celestial navigation was not suited for all weather military operations These forms of navigation were extended and enhanced when explorers began guiding spacecraft into space and across the solar system Astronauts combined celestial navigation technology with radio transmissions The development of the atomic clock revolutionized space flight because it could measure billionths of a second thereby allowing mission teams to navigate more accurately Scientists and engineers applied these technologies to navigation on earth to develop space based time and navigation services such as GPS that is used every day by people from all walks of life While the history of navigation is one of constant change and innovation it is also one of remarkable continuity Time and Navigation tells the story of navigation to help us understand where we have been and how we got there so that we can understand where we are going

Militarizing Outer Space Alexander C.T. Geppert, Daniel Brandau, Tilmann Siebeneichner, 2020-12-02 Militarizing Outer Space explores the dystopian and destructive dimensions of the Space Age and challenges conventional narratives of a bipolar Cold War rivalry Concentrating on weapons warfare and violence this provocative volume examines real and imagined endeavors of arming the skies and conquering the heavens The third and final volume in the groundbreaking European Astroculture trilogy Militarizing Outer Space zooms in on the interplay between security technopolitics and knowledge from the 1920s through the 1980s Often hailed as the site of heavenly utopias and otherworldly salvation outer space transformed from a promised sanctuary to a present threat where the battles of the future were to be waged Astroculture proved instrumental in fathoming forms and functions of warfare's futures past both on earth and in space The allure of dominating outer space the book shows was neither limited to the early twenty first century nor to current American space force rhetorics

Where Minds and Matters Meet Volker Janssen, Amy Bix, Linda Nash, 2012-12-12 The American West where such landmarks as the Golden Gate Bridge rival wild landscapes in popularity and iconic significance has been viewed as a frontier of technological innovation Where Minds and Matters Meet calls attention to the convergence of

Western history and the history of technology showing that the region's politics and culture have shaped seemingly placeless global technological practices and institutions Drawing on political and social history as well as art history the book's essays take the cultural measure of the region's great technological milestones including San Diego's Panama California Exposition the building of the Hetch Hetchy Dam in the Sierras and traffic planning in Los Angeles Contributors Amy Bix Louise Nelson Dyble Patrick McCray Linda Nash Peter Neushul Matthew W Roth Bruce Sinclair L Chase Smith Carlene Stephens Aristotle Tympas Jason Weems Peter Westwick Stephanie Young

GPS Paul E. Ceruzzi, 2018-11-06 A concise history of GPS from its military origins to its commercial applications and ubiquity in everyday life GPS is ubiquitous in everyday life GPS mapping is standard equipment in many new cars and geolocation services are embedded in smart phones GPS makes Uber and Lyft possible driverless cars won't be able to drive without it In this volume in the MIT Press Essential Knowledge series Paul Ceruzzi offers a concise history of GPS explaining how a once obscure space technology became an invisible piece of our infrastructure as essential to modern life as electric power or clean water GPS relays precise time and positioning information from orbiting satellites to receivers on the ground at sea and in the air It operates worldwide and its basic signals are free although private companies can commodify the data provided Ceruzzi recounts the origins of GPS and its predecessor technologies including early aircraft navigation systems and satellites He describes the invention of GPS as a space technology in the post Apollo pre Space Shuttle years and its first military and commercial uses Ceruzzi explains how the convergence of three major technological developments the microprocessor the Internet and cellular telephony enabled the development and application of GPS technology Recognizing the importance of satellite positioning systems in a shifting geopolitical landscape and perhaps doubting U S assurances of perpetual GPS availability other countries are now building or have already developed their own systems and Ceruzzi reports on these efforts in the European Union Russia India China and Japan

NRL Review, 2014

A New Way of Seeing Michael Sarnowski, 2025-06-04 A New Way of Seeing considers the poetry of five writers Louis Simpson Keith Douglas Richard Hugo Howard Nemerov and Randall Jarrell whose work draws on their activities as soldiers in World War II Basing his examination on extensive primary source research Michael Sarnowski identifies distance both literal and figurative and traumatic memory as two interconnected elements of how these poets internalized the war and made sense of the events they witnessed The book is structured on a gradient related to each poet's proximity to combat as the chapters in turn focus on an infantryman Simpson a tank commander Douglas a bombardier Hugo a pilot Nemerov and a stateside flight instructor Jarrell Sarnowski relies on a wealth of archival material overlooked by previous scholarship including poem drafts correspondence flight logs and personal belongings The conclusion revisits notions of legacy and representation by assessing factors that contributed to the early labeling of World War II soldiers as a Silent Generation in contrast to the outpouring of poetry published during and following the First World War By exploring how poets processed their wartime experiences A New Way of Seeing offers a stark reminder of why it remains

vital to recognize the physical mental and psychological consequences endured by veterans

Interpreting Our World Joseph J. Kerski, 2016-10-17 This important book demonstrates why geography matters in the modern day world through its examination of 100 moments throughout history that had a significant impact on the study of geography literally writing about the earth Geography is not simply accounts of the lands of earth and their features it s about discovering everything there is to know about our planet This book shows why geography is of critical importance to our world s 21st century inhabitants through an exploration of the past and present discoveries that have been made about the earth It pinpoints 100 moments throughout history that had a significant impact on the study of geography and the understanding of our world including widely accepted maps of the ancient world writings and discoveries of key thinkers and philosophers key exploration events and findings during the Age of Discovery the foundations of important geographic organizations and inventions in digital mapping The book begins with a clear explanation of geography as a discipline a framework and a way of viewing the world followed by coverage of each of the 100 discoveries and innovations that provides sufficient background and content for readers to understand each topic The book concludes with a concise synopsis of why it all matters and a look forward to 10 possible future discoveries in the next 50 years of geography Students will gain a clear sense of what is truly revolutionary about geography perhaps challenging their preconceived notion of what geography actually is and grasp how important discoveries revolutionized not only the past but the present day as well

The Train and the Telegraph Benjamin Sidney Michael Schwantes, 2019-08-06 A challenge to the long held notion of close ties between the railroad and telegraph industries of the nineteenth century To many people in the nineteenth century the railroad and the telegraph were powerful transformative forces ones that seemed to work closely together to shape the economy society and politics of the United States However the perception both popular and scholarly of the intrinsic connections between these two institutions has largely obscured a far more complex and contested relationship one that created profound divisions between entrepreneurial telegraph promoters and warier railroad managers In The Train and the Telegraph Benjamin Sidney Michael Schwantes argues that uncertainty mutual suspicion and cautious experimentation more aptly describe how railroad officials and telegraph entrepreneurs hesitantly established a business and technical relationship The two industries Schwantes reveals were drawn together gradually through external factors such as war state and federal safety regulations and financial necessity rather than because of any perception that the two industries were naturally related or beneficial to each other Complicating the existing scholarship by demonstrating that the railroad and telegraph in the United States were uneasy partners at best and more often outright antagonists throughout the nineteenth and early twentieth centuries The Train and the Telegraph will appeal to scholars of communication transportation and American business history and political economy as well as to enthusiasts of the nineteenth century American railroad industry
