Treering Research In The Netherlands:

Tree-ring Dating and Archaeology M.G.L. Baillie, 2014-10-24 The analysis of tree ring patterns or dendrochronology is a very exact science and an important dating technique The basis of the method is misleadingly simple that overlap of successive older ring patterns can generate a master chronology and samples of unknown age can then be checked against this This book published originally in 1982 traces the development of a specific project from its inception to the successful completion of some of the longest chronologies in Europe In doing so it looks at some of the problems associated with the subject and at the levels of precision possible After outlining the techniques associated with the measurement and processing of tree ring patterns the author traces an attempt to construct such an independent chronology in a new area The book breaks naturally into sections conditioned by the availability of timbers and these can be listed as modern late medieval medieval early medieval and prehistoric As far as possible the results are presented in the order in which things happened thus preserving the sense of a developing subject

Fundamentals of Tree Ring Research James H. Speer, 2021-11-30 Tree ring dating dendrochronology is a method of scientific dating based on the analysis of tree ring growth patterns As author James Speer notes trees are remarkable bioindicators Although there are other scientific means of dating climatic and environmental events dendrochronology provides the most reliable of all paleorecords Dendrochronology can be applied to very old trees to provide long term records of past temperature rainfall fire insect outbreaks landslides hurricanes and ice storms to name only a few events This comprehensive text addresses all of the subjects that a reader who is new to the field will need to know and will be a welcome reference for practitioners at all levels It includes a history of the discipline biological and ecological background principles of the field basic scientific information on the structure and growth of trees the complete range of dendrochronology methods and a full description of each of the relevant subdisciplines Individual chapters address the composition of wood methods of field and laboratory study dendroarchaeology dendroclimatology dendroecology dendrogeomorphology and dendrochemistry The book also provides thorough introductions to common computer programs and methods of statistical analysis In the final chapter the author describes frontiers in dendrochronology with an eye toward future directions in the field He concludes with several useful appendixes including a listing of tree and shrub species that have been used successfully by dendrochronologists Throughout photographs and illustrations visually represent the state of knowledge in the field

Acidification Research in the Netherlands T. Schneider, G.J. Heij, 1991-08-21 This book contains the results and conclusions of extensive research on the causes and effects of acidification of forests forest soils and heathland in the Netherlands In 1985 the Dutch Priority Programme on Acidification was started in order to give a more concrete form to the increasing interest of policy makers in the effects of air pollution on ecosystems in particular In the last three years the research has focused on obtaining a more accurate estimate of the emission of ammonia on the deposition of SO_x NO_y and NH_x and also on quantifying effects on forest and heathland

ecosystems This quantification of effects included experimental work model analyses and derivation of critical loads and levels for forest and heathland ecosystems Furthermore scenario analyses were made with the Dutch Acidification Systems Model DAS in order to evaluate the effectiveness of policy measures The research itself which formed the basis for this book has been described in the reports on individual projects A summary of the scientific results and conclusions is given in thematic reports added as annex An independent Review Team has provided a critical assessment of the research carried out since 1988 The Review Report has been incorporated as annex

Dutch East India Company Shipbuilding Wendy van Duivenvoorde, 2015-03-30 Eight months into its maiden voyage to the Indies the Dutch East India Company's Batavia sank on June 4 1629 on Morning Reef in the Houtman Abrolhos off the western coast of Australia Wendy van Duivenvoorde's five year study was aimed at reconstructing the hull of Batavia the only excavated remains of an early seventeenth century Indiaman to have been raised and conserved in a way that permits detailed examination using data retrieved from the archaeological remains interpreted in the light of company archives ship journals and Dutch texts on shipbuilding of this period Over two hundred tables charts drawings and photographs are included *Tree-ring Bulletin*, 1993 *Heritage and the Sea* Ana Crespo Solana, Filipe Castro, Nigel Nayling, 2022-03-15 This two volume set highlights the importance of Iberian shipbuilding in the centuries of the so called first globalization 15th to 18th in confluence with an unprecedented extension of ocean navigation and seafaring and a greater demand for natural resources especially timber mostly oak *Quercus* spp and Pine *Pinus* spp The chapters are framed in a multidisciplinary and interdisciplinary line of research that integrates history Geographic Information Sciences underwater archaeology dendrochronology and wood provenance techniques This line of research was developed during the ForSEAdiscovery project which had a great impact in the academic and scientific world and brought together experts from Europe and America The volumes deliver a state of the art review of the latest lines of research related to Iberian maritime history and archaeology and their developing interdisciplinary interaction with dendroarchaeology This synthesis combines an analysis of historical sources the systematic study of wreck remains and material culture related to Iberian seafaring from the 15th to the 18th centuries and the application of earth sciences including dendrochronology The set can be used as a manual or work guide for experts and students and will also be an interesting read for non experts interested in the subject Volume 2 focuses on approaches to the study of shipwrecks including a synthesis of dendro archaeological results current interdisciplinary case studies and the specialist study of artillery and anchors

Tree-ring Research in the Netherlands D. Eckstein, Johannes Ayolt Brongers, J. Bauch, 1975 *The Oxford Handbook of Byzantine Studies* Elizabeth Jeffreys, John F. Haldon, Robin Cormack, 2008 The Oxford Handbook of Byzantine Studies presents discussions by leading experts on all significant aspects of this diverse and fast growing field Byzantine Studies deals with the history and culture of the Byzantine Empire the eastern half of the Late Roman Empire from the fourth to the fourteenth century Its centre was the city formerly known as Byzantium refounded as Constantinople in 324

CE the present day Istanbul Under its emperors patriarchs and all pervasive bureaucracy Byzantium developed a distinctive society Greek in language Roman in legal system and Christian in religion Byzantium s impact in the European Middle Ages is hard to over estimate as a bulwark against invaders as a meeting point for trade from Asia and the Mediterranean as a guardian of the classical literary and artistic heritage and as a creator of its own magnificent artistic style

Nanotechnologies and Nanomaterials for Diagnostic, Conservation and Restoration of Cultural Heritage

Giuseppe Lazzara,Rawil F. Fakhrullin,2018-10-12 Nanotechnologies and Nanomaterials for Diagnostic Conservation and Restoration of Cultural Heritage explores how advanced nanoscale techniques can help preserve artworks The book covers lab scale available techniques as well as advanced methods from neutron sources and X ray spectroscopy Other sections highlight a variety of nanomaterials with potential uses in treatments for restoration and conservation with conservation consolidation and long term protection protocols analyzed in each case The final chapter presents case studies demonstrates how nanoscale techniques are used to conserve art and shows what happens when misinterpretation of data sources leads to misdiagnosis The book is intended for scientists from academic and professional conservators restorers who are involved in the conservation of artistic and historical artifacts and those who want to learn how nanotechnology can increase the efficiency of conservation and protection techniques Cogently explains how nanotechnology is used in the preservation protection and restoration of artworks Explores the best nanomaterials for a variety of situations Shows how nanomaterials can be used in restoration for cleaning and in conservation treatments Includes guidelines to prevent the misinterpretation of diagnostic data to help avoid misdiagnosis *Tree-ring Research* ,2006 **A Slice Through Time** M.G.L.

Baillie,2012-10-12 The dramatic development of European oak chronologies over the last ten years parallels and supplements the bristlecone pine chronology in the United States Dendrochronologists can now provide a wood sample a time capsule of biological material for any calender date over the last seven millennia from two continents For archaeologists resigned to the imprecision of radiocarbon dating the implications are profound For the first time it is possible to establish precise dates for prehistoric events Similarly we have an independent and scientifically objective way of testing historical accounts such as the traditional Egyptian chronology Equally fundamental are the insights provided by the related disciplines of dendroecology and dendroclimatology The Bronze Age eruption of Santorini and the AD 540 event are explored as fascinating case studies Drawing on a further decade of research by himself and others Mike Baille not only brings the pre 1980 story up to date but demonstrates the wide and exciting applications of this comparatively new science *Encyclopedia of Quaternary Science* Cary Mock,2013-03-25 The second revised edition of the Encyclopedia of Quaternary Science Four Volume Set provides both students and professionals with an up to date reference work on this important and highly varied area of research There are lots of new articles and many of the articles that appeared in the first edition have been updated to reflect advances in knowledge since 2006 when the original articles were written The second edition will contain about 375 articles written by

leading experts around the world This major reference work is richly illustrated with more than 3 000 illustrations most of them in colour Research in the Quaternary sciences has advanced greatly in the last 10 years especially since topics like global climate change geologic hazards and soil erosion were put high on the political agenda This second edition builds upon its award winning predecessor to provide the reader assured quality along with essential updated coverage Contains 357 broad ranging articles 4310 pages written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field Facilitates teaching and learning The first edition was regarded by many as the most significant single overview of Quaternary science ever yet Editor in Chief Scott Elias has managed to surpass that in this second edition by securing even more expert reviews whilst retaining his renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next

Stable Isotopes in Tree Rings Rolf T. W. Siegwolf,J. Renée Brooks,John Roden,Matthias Saurer,2022-06-06 This Open Access volume highlights how tree ring stable isotopes have been used to address a range of environmental issues from paleoclimatology to forest management and anthropogenic impacts on forest growth It will further evaluate weaknesses and strengths of isotope applications in tree rings In contrast to older tree ring studies which predominantly applied a pure statistical approach this book will focus on physiological mechanisms that influence isotopic signals and reflect environmental impacts Focusing on connections between physiological responses and drivers of isotope variation will also clarify why environmental impacts are not linearly reflected in isotope ratios and tree ring widths This volume will be of interest to any researcher and educator who uses tree rings and other organic matter proxies to reconstruct paleoclimate as well as to understand contemporary functional processes and anthropogenic influences on native ecosystems The use of stable isotopes in biogeochemical studies has expanded greatly in recent years making this volume a valuable resource to a growing and vibrant community of researchers

Fire in Ecosystems of Boreal Eurasia Johann Georg Goldammer,Valentin Furyaev,1996-07-31 One of the first priority areas among joint East West research programs is the rational use of natural resources and sustainable development of regions In the boreal zone of North America and Eurasia forests are economically very important and at the same time highly vulnerable to disturbances Because of its size and ecological functions the boreal forest zone and its most dynamic disturbance factor fire play an important role in ecosystem processes on global scale Interest within the global change research community in Northern Eurasia Fennoscandia European Russia Siberia and the Far East of Russia has grown dramatically in the last few years It is a vast area about which very little is known It is a region where temperature rise due to anthropogenic climate forcing is predicted to be the greatest and where the consequent feedbacks to the atmosphere are potentially large In addition it is poised to undergo rapid economic development which may lead to large and significant changes to its land cover Much of

this interest in Northern Eurasia as in the high latitude regions in general is centered on its role in the global carbon cycle which is likely to be significantly affected under global change New research initiatives between Western and Eastern countries have been designed to address a series of phenomena problems and management solutions Chronometric Dating in Archaeology R.E. Taylor, Martin J. Aitken, 2013-06-29 Since World War II there has been tremendous success in the development of new methods for dating artifacts the so called radiocarbon revolution was only the first such discovery The increasing accuracy of the various new techniques has brought about major changes in archaeological research strategies This important new text compiles the work of some of today's most innovative archaeologists who summarize progress in their respective techniques over the last 30 years with an emphasis on developments of the last five and the status of current research *Late Cenozoic Climate Change in Asia* Zhisheng An, 2014-03-24 This book is the first of its kind on environmental change research devoted to monsoon arid environment evolution history and its mechanism involved Capturing the most prominent features of Asian climate and environmental changes it gives a comprehensive review of the Asian Monsoon records providing evidence for spatial and temporal climatic and environmental changes across the Asian continent since the Late Cenozoic The dynamics underlying these changes are explored based on various bio geological records and in particular based on the evidence of loess speleothems as well as on mammal fossils The Asian monsoon arid climate system which quantifies the controlling mechanisms of climate change and the way it operates in different time scales is described Attempts to differentiate between natural change and human induced effects which will help guide policies and countermeasures designed to support sustainable development on the Chinese Loess Plateau and the arid west

Measurements, Indicators, and Research Methods for Sustainability Ian Spellerberg, Daniel S. Fogel, Sarah E. Fredericks, Lisa M. Butler Harrington, Maria Proto, Patricia Wouters, 2012-04-09 Measurements Indicators and Research Methods for Sustainability presents a thorough and accessible overview of the ways in which sustainability is charted worldwide Some articles introduce basic concepts such as quantitative versus qualitative data or the weak versus strong sustainability debate others examine how indicators in specific areas climate change and soil conservation agriculture and mining have been applied or not to different regions Research analysts explain the modes and media through which these measurements are broadcast stressing the importance of developing methods that can be understood by both experts and ordinary citizens They also examine the process of monitoring itself a controversial topic affecting national or international policy law rules and regulations **Surface Temperature Reconstructions for the Last 2,000 Years** National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Surface Temperature Reconstructions for the Last 2,000 Years, 2007-01-05 In response to a request from Congress Surface Temperature Reconstructions for the Last 2 000 Years assesses the state of scientific efforts to reconstruct surface temperature records for Earth during approximately the last 2 000 years and the implications of these efforts for our understanding of global

climate change Because widespread reliable temperature records are available only for the last 150 years scientists estimate temperatures in the more distant past by analyzing proxy evidence which includes tree rings corals ocean and lake sediments cave deposits ice cores boreholes and glaciers Starting in the late 1990s scientists began using sophisticated methods to combine proxy evidence from many different locations in an effort to estimate surface temperature changes during the last few hundred to few thousand years This book is an important resource in helping to understand the intricacies of global climate change

Tree Rings Fritz Hans Schweingruber, 2012-12-06 At a meeting of dendrochronologists an American colleague described the effects of volcanic eruptions on annual ring formation in bristlecone pines I knew very little about either volcanoes or American pines At the same meeting European scientists spoke on the dendrochronological dating of lakeshore settlements and the effects of larch bud moth attack on trees in the Alps It is possible that American participants were not in a position to fully appreciate these papers either In other words dendrochronology is an extremely interdisciplinary science its facets range from modern statistics on wood anatomy to the history of art It is difficult even for dendrochronologists to keep in touch with the whole spectrum and even more difficult for the layman to obtain an overall view of the many methods and fields of application In recent times specialisation has begun to hinder communication between the various sectors Archaeologists for instance set up their own dendrochronological laboratories and construct independent chronologies to serve their particular interests The scientific institutions which previously carried out such work are now turning more and more to strongly statistically or biologically oriented questions The full wealth of information contained in tree rings however will be revealed only when dendrochronologists make a concerted effort to relate the findings of the different fields In spite of inevitable specialisation it is necessary that the expert concern himself with the work of his colleagues
