Uncle Tungsten Oliver Sacks, 2002-09-17 From his earliest days Oliver Sacks the distinguished neurologist who is also one of the most remarkable storytellers of our time was irresistibly drawn to understanding the natural world Born into a large family of doctors metallurgists chemists physicists and teachers his curiosity was encouraged and abetted by aunts uncles parents and older brothers But soon after his sixth birthday the Second World War broke out and he was evacuated from London as were hundreds of thousands of children to escape the bombing Exiled to a school that rivaled Dickens's grimmest fed on a steady diet of turnips and beetroots tormented by a sadistic headmaster and allowed home only once in four years he felt desolate and abandoned When he returned to London in 1943 at the age of ten he was a changed withdrawn boy one who desperately needed order to make sense of his life He was sustained by his secret passions for numbers for metals and for finding patterns in the world around him Under the tutelage of his chemical uncle *Uncle Tungsten* Sacks began to experiment with the stinks and bangs that almost define a first entry into chemistry tossing sodium off a bridge to see it take fire in the water below producing billowing clouds of noxious smelling chemicals in his home lab As his interests spread to investigations of batteries and bulbs vacuum tubes and photography he discovered his first great scientific heroes men and women whose genius lay in understanding the hidden order of things and disclosing the forces that sustain and support the tangible world There was Humphry Davy the boyish chemist who delighted in sending flaming globules of metal shooting across his lab Marie Curie whose heroic efforts in isolating radium would ultimately lead to the unlocking of the secrets of the atom and Dmitri Mendeleev inventor of the

Neuroscience and Art Amy Ione, 2024-08-27 This book is focused on how understanding ourselves as humans is incomplete without considering both biological and cultural aspects Using the neurocultural perspective the book explores how everything in the world is filtered back and forth through the brain and culture The thrust of the book therefore is to explore the power of art in creating a bridge between cultural and neuroscientific lines of inquiry Looking at both clinical and non clinical populations the text examines historical foundations distinguishes congenital developmental conditions from those that are acquired and emphasizes how the brain constructs our sensory experiences Several distinctive features separate this research from other publications First the book opens with a review of how the historical literature is still etched into the ideas we employ to explain elements across the interdisciplinary fields of art aesthetics our sensory experience psychology cognition and well being Second the research adopts a humanistic rather than a philosophical or social science perspective in demonstrating the value of coupling anatomy and physiology with the natural and social environment In this artists from all genres are incorporated Among them are Iris Murdoch Ludwig van Beethoven Leonardo da Vinci Cristoforo de Predis Rembrandt Federico Fellini Chuck Close and David Hockney Case studies demonstrate how neuroscientific research meshes with art individual and cultural variables in ways that range from health and well being to physiological decline and biological traumas These include a case study that examines how Oliver Sacks combined biology and biography in his writings It also explores art projects in several genres inspired by his studies Another case study is on the role of film as a useful clinical tool Here the book also demonstrates that cinematic devices used by filmmakers intersect with perceptual and cognitive neuroscience A defining feature of the analysis is the integration of research on brain injuries with humanistic responses in film literature and the visual arts This section outlines the lack of consensus regarding the causes and treatment of shell shock in World War I before introducing how research and art now work with PTSD TBI Finally the book examines therapeutic cases of professional and non professional artists concluding with a discussion of synesthesia and the senses
