Community-Acquired Pneumonia Antoni Torres, Rosario Menendez, 2008-07-31 Community Acquired Pneumonia CAP refers to pneumonia acquired outside of hospitals or extended care facilities and is distinct from Nosocomial or hospital acquired pneumonia which is a separate disease entity It is one of the most common respiratory infections and presents one of the major health problems today with an incidence that ranges from eight to fifty cases per thousand individuals each year Mortality is still very high and yet the risk factors are very well known Many of these are related to antibiotic treatment delay in administration inadequacy of empiric antibiotics and lack of adherence to guidelines for treatment are all clearly associated with poor treatment outcomes Following a description of the epidemiology and

microbial etiology of ambulatory and hospitalized CAP this book provides an in depth review of the important new advances in therapeutics including management of drug resistance to the three major classes of antibiotics used for treatment of CAP lactams macrolides and quinolones All of them have advantages and disadvantages and these are put into perspective This book highlights guideline recommendations and presents a balanced analysis to help physicians deliver the highest standard of care In addition the authors provide an insight into the 10% of patients who do not respond to antibiotics and could benefit from adjunctive therapies some still under review This volume will be welcomed by pulmonologists and all clinicians involved in managing community acquired pneumonia Annual Reports in Medicinal Chemistry Annette M. Doherty,2003-09-10

Annual Reports in Medicinal Chemistry provides timely and critical reviews of important topics in medicinal chemistry together with an emphasis on emerging topics in the biological sciences which are expected to provide the basis for entirely new future therapies Sections I IV are disease orientated and generally report on specific medicinal agents Sections V VI continue to emphasize important topics in medicinal chemistry biology and drug design In addition to the chapter reviews a comprehensive set of indices has been included to enable the reader to easily locate topics in Volumes 1 38 of this series

Challenges of Pharmacoeconomics in Global Health Arena Mihajlo (Michael) Jakovljevic, Nick Verhaeghe, Kyriakos Souliotis, 2019-03-01 The pace of globalization has significantly accelerated since the end of the Cold War Era in 1989 These changes profoundly affected health care systems worldwide Health policy makers increasingly started facing new harsh challenges in their uneasy task to provide universal health coverage and decent equity of access to medical services Among the most prominent demand side issues are extended longevity joined with population aging rise of non communicable

diseases and growing patient expectations Supply side causes are gains in societal welfare and living standards technological innovation in medicine and continuing rapid urbanization in developing world regions Successful insurance based risk sharing agreements made drug dispensing and medical service provision cheap or virtually free at the point of consumption in most OECD and many middle income countries Coupled with massive build up of workforce capacities and strengthening of primary care and hospital networks all these factors contributed to the supplier induced demand phenomenon There is straightforward historical evidence of long term growth in pharmaceutical and overall health spending both in absolute and GDP% terms worldwide The accumulated constraints deriving from skyrocketing costs of care were felt in many areas of clinical medicine even among the richest societies Cardinal examples of expensive and hardly affordable therapeutic areas are orphan drugs indicated to treat rare diseases and targeted biologicals used in autoimmune disorders and cancer Last but not least is troubled and frequently denied access to even essential generic pharmaceuticals still taking place in many nations This appears to be particularly the case among the world s poor and under served citizens residing in rural and suburban areas of low and middle income countries To a large extent these difficulties are worsened by lack of evidence based resource allocation strategies and less sustainable financing strategies
