Weber,Jim Weber,2022-08-24 While day flying butterflies have long captured the attention of nature enthusiasts moth species outnumber butterfly species by about fifteen to one with many being overlooked due to their mostly nocturnal habits Although they are far less noticeable to us moths are essential to many other species including the plants they pollinate and the animals they nourish In their caterpillar or larval form they provide a primary source of sustenance for birds and as adults they feed everything from tiny bats to large mammals Native plants are of utmost importance for moths as they evolved alongside them and they are the principal factor for dictating moth species range and distribution Like butterflies moths require native plant species they recognize in order to lay their eggs This user friendly heavily illustrated follow up to Lynne and Jim Weber s highly successful Native Host Plants for Texas Butterflies describes over 100 native larval host plants for moths in Texas More than 150 moth species are illustrated in the book both larval and adult phases with one to two species for each of the larval host plants Today there are about 4 700 species of moths recognized in Texas with new species and their host plant associations still being discovered Native Host Plants for Texas Moths will prove to be an informative introduction to this less widely known world of moths and their host plants providing a better understanding of how to discover support and protect these important insects
