In today's South, where fine gardening is a tradition, many homeowners and professional gardeners are discovering a vast new palette of plant materials: native plants. They are realizing that these native wildflowers, trees, shrubs, groundcovers, vines, and grasses are far better suited and therefore easier to grow and maintain than most of the imported plants that populate traditional landscapes. In this book, the authors offer an exciting vision of the many possibilities and advantages of going native. Lavishly illustrated with more than 250 gorgeous color photographs, this book is both an introduction to more than 200 of the most familiar and easiest to find native plants of the South and a basic primer on how to use them effectively. *Atlas of United States Trees* Elbert Luther Little, 1978 **U.S. Department of Agriculture Miscellaneous Publication**, 1978

Proceedings for the Eight Biennial Southern Silvicultural Research Conference M. Boya Edwards, 2001. Sklar, Arnold van der Valk, 2012-12-06. PREFACE: Within the Florida Everglades, tree islands, which cover only a small percent of this ecosystem, historically have provided essential habitat for a wide variety of terrestrial and amphibious plants, birds, and animals. These tree islands, however, have been one of its least studied features. Because of their less flood-tolerant vegetation, tree islands are one of the most sensitive components of the Everglades to changes in hydrology, and many tree islands have been lost during periods when water levels have been abnormally high or low. Their sensitivity to water level changes makes tree islands potentially one of the best and surest measures of the overall hydrologic health of the Everglades. Consequently, the maintenance of healthy, functioning tree islands and the restoration of those that have been lost will be an important performance measure that will be used to judge the success of the Comprehensive Everglades Restoration Plan (CERP). A symposium on Tree Islands of the Everglades was held on July 14 and 15, 1998, at Florida Atlantic University, Boca Raton, Florida. It was sponsored by Florida Center for Environmental Studies and the South Florida Water Management District. This was the first scientific meeting ever devoted to tree islands. The organizers of this symposium were Drs. Arnold van der Valk, Florida Center for Environmental Studies, and Iowa State University; Fred Sklar, South Florida Water Management District; and Wiley Kitchens, United States Geological Survey.
