Kramer, William J. McDonald, James C. Thomson, 2012-12-06 In the past decade the field of trenchless technology has expanded rapidly in products equipment and utilization This expansion would not have occurred without a strong increase in economic incentives to the user Because

the operating environment has changed trenchless technology is often the preferred alternative to traditional methods of digging holes and installing conduits. The infrastructure in which we live has become more congested and has to be shared by several users. In addition, the cost of restoring a road or landscaped area after construction may be higher than the cost of installing the conduit. These factors add to the need for trenchless technology, the ability to dig holes without disturbing the surface. In some ways, trenchless technology is a futuristic concept. Ruth Krauss in a children's book of definitions wrote "A Hole Is to Dig But" this statement is not necessarily true. Today a hole could be bored. Trenchless technology is not new. But it certainly has become the buzzword of the construction industry and it appears that it will have a growing impact in the way contractors, utilities and others install new facilities. Methods to bore horizontal holes were practiced as early as the 1800s but this technology has greatly changed. Today's tools include sophisticated drilling methods, state of the art power systems and electronic guidance techniques. These tools can bore faster, safer and more accurately and in many instances more economically than open cut methods. Technology has played an important role in these advances but economics has become the driving force in making these systems popular.
