1. *Journal of the American Medical Association*, 2000; 283: 2686-2692.

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to determine what consumers want and what problems they are trying to solve. Once a need is identified, the next step is to develop a concept for a product that addresses that need. This is often done through brainstorming and sketching ideas. The third step is to create a prototype, which is a preliminary model of the product. This allows the designer to test the product's functionality and make any necessary adjustments. Finally, the product is manufactured and distributed to the market. Throughout this process, it is important to keep the target audience in mind and to iterate on the design as needed.

- WORK**

- [illegible]

When receiving the spring catalog with the price of each vehicle, I felt the sting that I had expected. The vehicles fall into the category of the price of a good car, but not a good car.
