celebrating arcade games in Tron Legacy and Wreck It Ralph Hollywood suddenly seems to be experiencing a wave of intense nostalgia for outmoded technologies To what extent is that a sincere lament for modes of artistic production that have nearly vanished in an all digital era And to what extent is it simply a cynical marketing ploy built on the notion that nostalgia has always been one of Hollywood's top selling products In Flickers of Film Jason Sperb offers nuanced and unexpected answers to these questions examining the benefits of certain types of film nostalgia while also critiquing how Hollywood's nostalgic representations of old technologies obscure important aspects of their histories He interprets this affection for the prehistory and infancy of digital technologies in relation to an industry wide anxiety about how the digital has grown to dominate Hollywood pushing it into an uncertain creative and economic future Yet he also suggests that Hollywood's nostalgia for old technologies ignores the professionals who once employed them as well as the labor opportunities that have been lost through the computerization and outsourcing of film industry jobs Though it deals with nostalgia Flickers of Film is strikingly cutting edge one of the first studies to critically examine Pixar's role in the film industry cinematic representations of videogames and the economic effects of participatory culture As he takes in everything from Terminator Salvation to The Lego Movie Sperb helps us see what's distinct about this recent wave of self aware nostalgic films how Hollywood nostalgia today isn't what it used to be *Disney's Live-Action Movie Bombs, 1979-2019*

D. Munns, 2017-07-19 Promising an end to global hunger and political instability huge climate controlled laboratories known as phytotrons spread around the world to thirty countries after the Second World War The United States built nearly a dozen including the first at Caltech in 1949 Made possible by computers and other novel greenhouse technologies of the early Cold War phytotrons enabled plant scientists to experiment on the environmental causes of growth and development of living organisms Subsequently they turned biologists into technologists who in their pursuit of knowledge about plants also set out to master the machines that controlled their environment Engineering the Environment tells the forgotten story of a research program that revealed the shape of the environment the limits of growth and development and the limits of human control over complex technological systems As support and funding for basic science dwindled in the mid 1960s phytotrons declined and ultimately disappeared until nearly thirty years later the British built the Ecotron to study the impact of climate change on biological communities By revisiting this history of phytotrons David Munns reminds us of the vital role they can play in helping researchers unravel the complexities of natural ecosystems in the Anthropocene **Studies on Cinematography and Narrative in Film: Sequels, Serials, and Trilogies** Seçmen, Emre Ahmet, 2024-07-18 Visual continuity in sequels poses a daunting challenge for filmmakers as they strive to maintain coherence while expanding upon established narratives and visual aesthetics With cinema's evolution audiences expectations have grown more sophisticated demanding seamless transitions and immersive experiences across film series However achieving this continuity requires a delicate balance between honoring the original work and introducing innovative elements to captivate viewers Addressing this complication is the book Studies on Cinematography and Narrative in Film: Sequels, Serials, and Trilogies which emerges with a comprehensive approach By delving into the interplay between cinematography and narrative structure this book offers invaluable insights for filmmakers seeking to navigate the complexities of sequel production Through meticulous analysis of prominent film series and theoretical frameworks it provides a roadmap for achieving visual coherence while pushing creative boundaries *The Digital Image and Reality* Daniel Strutt, 2025-10-01 The media technologies that surround and suffuse our everyday life profoundly affect our relation to reality Philosophers since Plato and Aristotle have sought to understand the complex influence of apparently simple tools of expression on our understanding and experience of the world time space materiality and energy *The Digital Image and Reality* takes up this crucial philosophical task for our digital era This rich yet accessible work argues that when new visual technologies arrive to represent and simulate reality they give rise to nothing less than a radically different sensual image of the world Through engaging with post cinematic content and the new digital formats in which it appears Strutt uncovers and explores how digital image making is integral to emergent modes of metaphysical

Digital Space and Embodiment in Contemporary Cinema Jennifer Kirby,2022-09-30 Digital Space and Embodiment in Contemporary Cinema examines how

contemporary cinema has represented and engaged with the experience of simultaneously inhabiting digital and material spaces i.e. composite spaces in the context of the growing ubiquitousness of digital media and culture. Bringing together a range of key cinematic texts, the book examines how these films represent composite space by depicting often subtly and without explicit reference to technology what it feels like to live in a world of ubiquitous digital media. The book explores composite spaces through the striking use of elements like colour, symbolic graphics and music, and covers topics like music as mediator between levels of experience, perception in visionary films such as *Sucker Punch* (2011) and *Spring Breakers* (2012), digital colour as an interface in films including *Under the Skin* (2013), the integration of digital graphical elements drawn from game spaces into material spaces in films such as *Scott Pilgrim vs The World* (2010) and *Nerve* (2016), and films that take place on a computer screen including 2020's widely discussed Zoom-produced pandemic horror film *Host*. Through the close analysis of these films, the book offers fresh perspectives on conceptual issues of embodiment, digital agency and subjectivity. This book is a valuable resource for advanced undergraduates, postgraduates and scholars in the fields of film studies, digital aesthetics and film theory, digital culture and digital media.
