Topological GeometroDynamics:

Topological GeometroDynamics Matti Pitkanen, 2006-05 Topological GeometroDynamics is a modification of general relativity inspired by the conceptual problems related to the definitions of inertial and gravitational energy in general relativity Topological geometrodynamics can be also seen as a generalization of super string models Physical space times are seen as four dimensional surfaces in certain eight dimensional space The choice of this space is fixed by symmetries of the standard model so that geometrization of known classical fields and elementary particle quantum numbers results The notion of many sheeted space time allows re interpretation of the structures of perceived world in terms of macroscopic space time topology The generalization of the number concept based on fusion of real numbers and p adic number fields implies a further generalization of the space time concept allowing to identify space time correlates of cognition and intentionality Quantum measurement theory extended to a quantum theory of consciousness becomes an organic part of theory A highly non trivial prediction is the existence of a fractal hierarchy of copies of standard model physics with dark matter identified in terms of macroscopic quantum phases characterized by dynamical and quantized Planck constant The book is a comprehensive overview and analysis of topological geometrodynamics as a mathematical and physical theory

Topological GeometroDynamics Matti Pitkänen, 1990 *Quantization in Astrophysics, Brownian Motion, and Supersymmetry* Florentin Smarandache, V. Christianto, 2007 *The Physical Nature of Consciousness* Philip R. Van Loocke, 2001-01-01 The Physical Nature of Consciousness contains twelve chapters that discuss recent and new perspectives on the relation between modern physics and consciousness Stuart Hameroff opens with an extended and updated exposition of the Penrose Hameroff Orch OR model and subsequently addresses recent criticisms of quantum approaches to the brain Evan Walker presents his view on consciousness from the perspective of a new approach to the integration of quantum theory and relativity Friedrich Beck elaborates on the Beck Eccles quantum approach to consciousness Karl Pribram puts the holographic view on consciousness in perspective of his life long work Peter Marcer and Edgar Mitchell explain the relevance of quantum holography for consciousness Gordon Globus discusses the relation between postmodern philosophical theories and quantum consciousness Chris Clarke develops a theory in terms of a specific type of formal logic to reconcile the phenomenology of consciousness with the physical world Ilya Prigogine summarizes his view on complexity and on the future of quantum theory which goes beyond the present formalism and goes on to comment on the problem of consciousness Matti Pitkanen identifies the place for consciousness in a unifying topological geometro dynamics theory Colin McGinn argues against classical materialism Dick Bierman gives an overview of anomalous phenomena He identifies a decline effect and discusses different possible interpretations Philip Van Loocke closes the volume with a discussion on how deep teleology in cellular systems may relate to consciousness Series A **The Worldwide List of Alternative Theories and Critics** Jean de Climont, 2020-11-01 This Worldwide List of Alternative Theories and Critics only available in english language includes

scientists involved in scientific fields The 2023 issue of this directory includes the scientists found in the Internet The scientists of the directory are only those involved in physics natural philosophy The list includes 9700 names of scientists doctors or diplome engineers for more than 70% Their position is shortly presented together with their proposed alternative theory when applicable There are nearly 3500 authors of such theories all amazingly very different from one another The main categories of theories are presented in an other book of Jean de Climont THE ALTERNATIVE THEORIES *Unified Theories* , *Geometrodynamics of Gauge Fields* Eckehard W. Mielke,2017-01-22 This monograph aims to provide a unified geometrical foundation of gauge theories of elementary particle physics The underlying geometrical structure is unfolded in a coordinate free manner via the modern mathematical notions of fibre bundles and exterior forms Topics such as the dynamics of Yang Mills theories instanton solutions and topological invariants are included By transferring these concepts to local space time symmetries generalizations of Einstein s theory of gravity arise in a Riemann Cartan space with curvature and torsion It provides the framework in which the broken Poincar gauge theory the Rainich geometrization of the Einstein Maxwell system and higher dimensional non abelian Kaluza Klein theories are developed Since the discovery of the Higgs boson concepts of spontaneous symmetry breaking in gravity have come again into focus and in this revised edition these will be exposed in geometric terms Quantizing gravity remains an open issue formulating it as a de Sitter type gauge theory in the spirit of Yang Mills some new progress in its topological form is presented After symmetry breaking Einstein s standard general relativity with cosmological constant emerges as a classical background The geometrical structure of BRST quantization with non propagating topological ghosts is developed in some detail *Hadron models and related New Energy issues* Florentin Smarandache,V. Christianto,2007-01-01 The present book covers a wide range of issues from alternative hadron models to their likely implications to New Energy research including alternative interpretation of low energy reaction coldfusion phenomena The authors explored some new approaches to describe novel phenomena in particle physics M Pitkanen introduces his nuclear string hypothesis derived from his Topological Geometrodynamics theory while E Goldfain discusses a number of nonlinear dynamics methods including bifurcation pattern formation complex Ginzburg Landau equation to describe elementary particle masses Fu Yuhua discusses a plausible method for prediction of phenomena related to New Energy development F Smarandache discusses his unmatter hypothesis and A Yefremov et al discuss Yang Mills field from Quaternion Space Geometry Diego Rapoport discusses link between Torsion fields and Hadronic Mechanic A H Phillips discusses semiconductor nanodevices while V and A Boju discuss Digital Discrete and Combinatorial methods and their likely implications to New Energy research Pavel Pintr et al describe planetary orbit distance from modified Schrodinger equation and M Pereira discusses his new Hypergeometrical description of Standard Model of elementary particles The present volume will be suitable for researchers interested in New Energy issues in particular their link with alternative hadron models and interpretation While some of these discussions may be found a bit too theoretical our view is that once these

phenomena can be put into rigorous theoretical framework thereafter more open minded physicists may be more ready to consider these New Energy methods more seriously Our basic proposition in the present book is that considering these new theoretical insights one can expect there are new methods to generate New Energy technologies which are clearly within reach of human knowledge in the coming years **Acorns: Windows High-Tide Foghat** Joshua Morris,2013-01-23 Acorns delineates the future of humanity as a reunification of intellect with the Deep Self Having chosen to focus upon ego established securely by the time of Christ much more beta brain wave development will destroy our species and others which process has already begun We create our own realities through beliefs intents and desires and we were in and out of probabilities constantly Feelings follow beliefs not the other way around **From Hilbert to Dilbert** Victor Christianto ,Florentin Smarandache,2019 This book took an unconventional theme because we submit an unorthodox theme too Karl Popper s epistemology suggests that when the theory is refuted by observation then it is time to look for a set of new approaches In the first chapter it is shown that Hilbert s axiomatic program has failed not only by experiment Mie theory does not agree with experiment but also in terms of logic G del theorem Therefore we set out a new approach starting from an old theory of Isaac Newton Dilbert cartoon series often offer surprising for old problems especially in this era of corporatocracy Now we would call such an out of the box solution to the old Hilbert axiomatic program as Dilbert way or Dilbertian if you wish Readers may ask but what can physicists learn from Dilbert cartoons While it seems not obvious at first glance yes we believe there is a great character of Dilbert cartoon i e to put it in one phrase out of thebox and brutally honest From managers who tend to criticize other folks only to make him her looks smart Or people who often send FYI emails only to make him her looks managing well We do think that such a brutal honesty is also needed in many fields of physics from theoretical physics to applied physics as will be discussed throughout this book
