

BIOTIC & ABIOTIC FEATURES

Abiotic Features: include temperature, humidity, and composition of air. The Amazon rainforest gets about 9 ft of water in the form of precipitation every year. Because the rainforest is filled with a variety of species, water is an essential need for survival. The soil in the Amazon rainforest is filled with nutrients that help a variety of plants and trees grow.

Biotic Features: include frogs, snakes, and antaters. The variety and role of plants within the rainforest help give this ecosystem its character. A rainforest is almost entirely self-watering; plants release water through transpiration, and this water becomes low-hanging clouds that produce rain and keep the rainforest moist.

SYMBIOTIC RELATIONSHIP

Mutualism: When both the organisms involved in the process of biological interaction benefit from each other, it is known as a 'mutualism relationship'. The relationship between the capuchin monkeys and flowering trees in the tropical rainforests is the best example of mutualism in this forest. When the capuchin monkey feeds on nectar in these flowers, it gets pollen on its face which it eventually transfers to other flowers in the process of landing on them. In this way, the trees provide the capuchin species with food while the capuchin monkey facilitates pollination of flowers of this tree.

Commensalism: When one of the two organisms involved benefits from the interaction, while the other remains unaffected. The ants manage to shake the floor as they march, which causes the insects on the forest floor to fly out. These insects are then happily snatched up by the birds. In this way, the birds benefit from the army ants, but the army ants are not benefited from the birds.

LOCATION

The Amazon Rainforest is located in 9 different countries with 40% of it being located in Brazil. The rest of this massive rainforest is situated in Peru, Colombia, Ecuador, Bolivia, Venezuela, Guyana, Suriname and French Guiana. While in theory you have 9 different places to experience the Amazon, we recommend to our travelers who seek to explore the rainforest to base themselves in one of the following countries: Brazil, Peru, Bolivia or Ecuador. These countries have an excellent infrastructure for our visitors so you won't need to worry about trying to navigate through the rainforest on your own and getting lost. This gigantic patch of natural beauty stretches itself over a staggering 2.1 million square miles and has earned its place on many travelers' bucket list. From trekking through the the endless greenery to a rafting along the powerful Amazon River, a trip to the Amazon rainforest is a fully immersive natural experience that gives people the opportunity to experience all the unique species of animals and plants, vast jungles and fascinating local tribes.

FOOD WEB

Primary Producers are the organisms that produce the source of food for the rainforest. Producers are usually green plants and are essential for the survival of the community. An example of these in the Amazon Rainforest are the trees, shrubs, bromeliads and other plants.

Primary Consumers are the organisms or animals that eat the producers (the first animal to eat in the food chain). Examples of these in the Amazon Rainforest are the monkeys, monkeys, agouti, sloths and toucans.

Secondary Consumers are the organisms or animals that eat the primary consumer.

CLIMATE

Since the Amazon rainforest is so large, temperatures vary depending on which area of the rainforest you visit. However, since it's all within the same basin, there are averages across the board. The temperatures of the Amazon rainforest are rarely higher of up to 91 degrees Fahrenheit and sometimes drop to as low as 71 degrees Fahrenheit at night. Different sections of the rainforest experience different levels and periods of rainfall. While the average annual rainfall is almost 500 inches, some areas can get nearly 400 inches of rain a year. Overall, no matter where you go in the Amazon rainforest, you're likely to feel the extreme humidity.
