

FIN 41202: Analysis of Financial Time Series Spring 2021, Gary S. Tsey

Lecture 1: Introduction

Financial time series (FTS) analysis is concerned with the theory and practice of asset valuation over time.

What are the differences from the traditional time series analysis?

Two topics are highly related, but FTS has added aspects which, however it must deal with the ever-changing business environment and the fact that **volatility** is not directly observed.

Objectives of the course:

- to review financial data and how such is processed then used within businesses
- to provide basic knowledge of FTS data such as characters, history, risks, and measures of dependence between asset returns
- to introduce statistical tools to investigate possible causal relationships between assets
- to guide project work by analyzing FTS
- to introduce several developments in financial econometrics and their applications, e.g., long-short risk factors
- to study methods for assessing market risk, credit risk, and operational loss. The methods discussed include Value at Risk, expected shortfall, and tail dependence.
