research into these psychomotor symptoms in several psychiatric illnesses This recent evolution is also reflected in the increased appreciation of these symptoms in the DSM 5 As a result of this increased focus new insights into the clinical and demographical presentation the etiology the course the prognostic value as well as treatment aspects of psychomotor symptomatology in different illnesses has emerged Still many new questions arise from these findings This research topic is comprised of all types of contributions original research reviews and opinion piece with a focus on psychomotor symptomatology in a psychiatric illness especially research focusing on one or more of the following topics the clinical presentation of the psychomotor syndrome the course through the illness the diagnostical specificity of the syndrome the underlying neurobiological or neuropsychological processes new assessment techniques pharmacological or non pharmacological treatment strategies
