Ed. preparada por Francisco Santos Coco* Historia silense, 1921 **Brain Networks for Studying Healthy and Pathological Aging Mechanisms and Intervention Efficacy** Christos Frantzidis, Ana B. Vivas, Panagiotis D. Bamidis, 2020-11-18 Previous studies showed that both healthy and pathological aging are associated with changes in brain structure and function of the mature human brain The most prominent anatomical alteration are changes in prefrontal cortex morphology volume loss and reduced white matter integrity and hippocampal atrophy Cognitive decline affects mainly the performance of episodic memory speed of sensory information processing working memory inhibitory function and long term memory It has been also proposed that due to the aforementioned changes the aging brain engages in compensatory brain mechanism such as a broader activation of cortical regions mainly frontal rather than specialized activation Evidence suggests that similar changes occur with pathological aging but to a greater extent In this case information flow is disrupted due to neurodegeneration functional activation of posterior occipito temporal regions is decreased and as a consequence the brain fails to process sensorial input in the ventral pathway and cognitive deficits appear In the last years functional alterations associated with aging have been studied using

the mathematical notion of graph theory that offers an integrative approach since it examines different properties of the brain network 1 Organization level 2 amount of local information processing 3 information flow 4 cortical community structure and 5 identification of functional anatomical hubs So graph theory offers an attractive way to model brain networks organization and to quantify their pathological deviations Previous studies have already employed this mathematical notion and demonstrated that age related neurodegeneration is often accompanied by loss of optimal network organization either due to diminished local information processing or due to progressive isolation of distant brain regions They have also found that changes in network properties may be present even in the preclinical phase which could be taken as a biological marker of disease
