Mettem, 2013-04-15. Bridges built in timber are enjoying a significant revival both for pedestrian and light traffic and increasingly for heavier loadings and longer spans.

Timber's high strength to weight ratio combined with the ease and speed of construction inherent in the off site prefabrication methods used make a timber bridge a suitable option in many different scenarios. This handbook gives technical guidance on forms, materials, structural design and construction techniques suitable for both small and large timber bridges. Eurocode 5 Part Two BS EN 1995-2 for the first time provides an international standard for the construction of timber bridges, removing a potential obstacle for engineers where timber construction for bridges has not in recent centuries at least been usual. Clearly illustrated throughout, this guide explains how to make use of this oldest construction material in a modern context to create sustainable, aesthetically pleasing, practical and durable bridges. Worldwide examples include Tourand Creek Bridge, Canada; Toijala, Finland; Punt la Resgia, Switzerland; Pont de Crest, France; Almore Pylon Bridge, the Netherlands.
