Service Life Estimation and Extension of Civil Engineering Structures Vistasp M. Karbhari,L S Lee,2010-12-20 Service life estimation is an area of growing importance in civil engineering both for determining the remaining service life of civil engineering structures and for designing new structural systems with well defined periods of functionality Service life estimation and extension of civil engineering structures provides valuable information on the development and use of newer and more durable materials and methods of construction as well as the development and use of new techniques of estimating service life Part one discusses using fibre reinforced polymer FRP composites to extend the service life of civil engineering structures It considers the key issues in the use of FRP composites examines the possibility of extending the service life of structurally deficient and deteriorating concrete structures and investigates the uncertainties of using FRP composites in the rehabilitation of civil engineering structures Part two discusses estimating the service life of civil engineering structures including modelling service life and

maintenance strategies and probabilistic methods for service life estimation It goes on to investigate non destructive evaluation and testing NDE NDT as well as databases and knowledge based systems for service life estimation of rehabilitated civil structures and pipelines With its distinguished editors and international team of contributors Service life estimation and extension of civil engineering structures is an invaluable resource to academics civil engineers construction companies infrastructure providers and all those with an interest in improving the service life safety and reliability of civil engineering structures A single source of information on the service life of reinforced concrete and fibre reinforced polymer FRP rehabilitated structures Examines degradation mechanisms in composites for rehabilitation considering uncertainties in FRP reliability Provides an overview of probabilistic methods for rehabilitation and service life estimation of corroded structures

Using the Engineering Literature, Second Edition Bonnie A. Osif, 2011-08-09 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links on a topic engineers need the best information information that is evaluated up to date and complete Accurate vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans While the award winning first edition of Using the Engineering Literature used a roadmap analogy we now need a three dimensional analysis reflecting the complex and dynamic nature of research in the information age Using the Engineering Literature Second Edition provides a guide to the wide range of resources available in all fields of engineering This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering The information age has greatly impacted the way engineers find information Engineers have an effect directly and indirectly on almost all aspects of our lives and it is vital that they find the right information at the right time to create better products and processes Comprehensive and up to date with expert chapter authors this book fills a gap in the literature providing critical information in a user friendly format
