Introducing Medical Anthropology Merrill Singer, Hans Baer, Debbi Long, Alex Pavlotski, 2019-03-20 The third edition of *Introducing Medical Anthropology: A Discipline in Action* provides students with a first exposure to the growing field of medical and health anthropology. The narrative is guided by unifying themes. First, health-oriented anthropologists are very involved in the process of helping to varying degrees to change the world around them through their work in applied projects, policy initiatives, and advocacy. Second, the authors present the fundamental importance of culture and social relationships in health and illness by demonstrating that illness and disease involve complex biosocial processes and that resolving them requires attention to a range of factors beyond biology. Third, through an examination of the issue of health inequality, this book underlines the need for an analysis that moves beyond cultural or even ecological models of health toward a comprehensive biosocial approach. Such an approach integrates biological, cultural, and social factors in building unified theoretical understandings of the origin of ill health while contributing to the building of effective and equitable national health care systems. NEW TO THIS EDITION: All chapters have been updated or expanded. NEW Chapter 8: The Biopolitics of Life, Biotechnology, Biocapital, and Bioethics. Revised text style for crisper language and livelier phrasing. Added a brief signposting of chapter content at the beginning of each chapter and review questions about the key issues and concepts at the end of each chapter. Expanded discussion of Zika, Ebola, gender and health, PTSD, and psychological anthropology. Geriatric health, the contemporary vaccine controversy, the internet and health, and the health impacts of fracking and nuclear energy development. Concluding chapter examines anthropologically informed strategies and visions for a healthier world.

Medical Anthropology Andrea Wiley, John S. Allen, 2008-08-21 Intended as the primary text for introductory courses on medical anthropology this text integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival Students who take this fastest growing anthropology course come from a variety of disciplines anthropology biology especially pre med students and health sciences especially so the text does not assume anything beyond a basic high school level familiarity with human biology and anthropology In addition to being the only current text that takes a biocultural approach it provides a state of the science review of selected topics and looks at the potential application of the biocultural anthropological approach to health interventions prevention Among the topics covered are nutrition infectious disease stress reproductive health behavioral disease aging race racism and health mental health and healers and healing

Anthropology in Public Health Robert A. Hahn, Kate W. Harris, 1999 Cultural and social boundaries often separate those who participate in public health activities and it is a major challenge to translate public health knowledge and technical capacity into public health action across these boundaries This book provides an overview of anthropology and illustrates in 15 case studies how anthropological concepts and methods can help us understand and resolve diverse public health problems around the world For example one chapter shows how differences in concepts and terminology among patients clinicians and epidemiologists in a southwestern U S county hinder the control of epidemics Another chapter examines reasons that Mexican farmers don't use protective equipment when spraying pesticides and suggests ways to increase use Another examines the culture of international health agencies demonstrates institutional values and practices that impede effective public health practice and suggests issues that must be addressed to enhance institutional organization and process Each chapter characterizes a public health problem describes methods used to analyse it reviews results and discusses implications several chapters also describe and evaluate programs designed to address the

problem on the basis of anthropological knowledge The book provides practical models and indicates anthropological tools to translate public health knowledge and technical capacity into public health action **Medical Anthropology** Pool, Robert, Geissler, Wenzel, 2005-09-01 This book provides an introduction to the basic concepts approaches and theories used and shows how these contribute to understanding complex health related behaviour Public health policies and interventions are more likely to be effective if the beliefs and behaviour of people are understood and taken into account *Clinically Applied Anthropology* N. Chrisman, T. Maretzki, 2012-12-06 like other collections of papers related to a single topic this volume arose out of problem sharing and problem solving discussions among some of the authors The two principal recurring issues were 1 the difficulties in translating anthropological knowledge so that our students could use it and 2 the difficulties of bringing existing medical anthropology literature to bear on this task As we talked to other anthropologists teaching in other parts of the country and in various health related schools we recognized that our problems were similar Similarities in our solutions led the Editors to believe that publication of our teaching experiences and research relevant to teaching would help others and might begin the process of generating principles leading to a more coherent approach Our colleagues supported this idea and agreed to contribute What we agreed to write about was Clinically Applied Anthropology Much of what we were doing and certainly much of the relevant literature was applied anthropology And our target group was composed mostly of clinicians The utility of the term became apparent after 1979 when another set of anthropologists began to discuss clinical Anthropology They too recognized the range of novel behaviors available to anthropologists in the health science arena and chose to focus on the clinical use of anthropology We see this as an important endeavor but very different from what we are proposing New Directions in Biocultural Anthropology Molly K. Zuckerman, Debra L. Martin, 2016-10-17 Biocultural or biosocial anthropology is a research approach that views biology and culture as dialectically and inextricably intertwined explicitly emphasizing the dynamic interaction between humans and their larger social cultural and physical environments The biocultural approach emerged in anthropology in the 1960s matured in the 1980s and is now one of the dominant paradigms in anthropology particularly within biological anthropology This volume gathers contributions from the top scholars in biocultural anthropology focusing on six of the most influential productive and important areas of research within biocultural anthropology These are critical and synthetic approaches within biocultural anthropology biocultural approaches to identity including race and racism health diet and nutrition infectious disease from antiquity to the modern era epidemiologic transitions and population dynamics and inequality and violence studies Focusing on these six major areas of burgeoning research within biocultural anthropology makes the proposed volume timely widely applicable and useful to scholars engaging in biocultural research and students interested in the biocultural approach and synthetic in its coverage of contemporary scholarship in biocultural anthropology Students will be able to grasp the history of the biocultural approach and how that history continues to impact scholarship as well as the scope of current research within the approach and the

foci of biocultural research into the future. Importantly, contributions in the text follow a consistent format of a discussion of method and theory relative to a particular aspect of the above six topics followed by a case study applying the surveyed method and theory. This structure will engage students by providing real world examples of anthropological issues and demonstrating how biocultural method and theory can be used to elucidate and resolve them. Key features include:

- Contributions which span the breadth of approaches and topics within biological anthropology from the insights granted through work with ancient human remains to those granted through collaborative research with contemporary peoples.
- Comprehensive treatment of diverse topics within biocultural anthropology from human variation and adaptability to recent disease pandemics, the embodied effects of race and racism, industrialization and the rise of allergy and autoimmune diseases, and the sociopolitics of slavery and torture.
- Contributions and sections united by thematically cohesive threads.
- Clear, jargon-free language in a text that is designed to be pedagogically flexible; contributions are written to be both understandable and engaging to both undergraduate and graduate students.
- Provision of synthetic theory, method, and data in each contribution.
- The use of richly contextualized case studies driven by empirical data. Through case study-driven contributions, each chapter demonstrates how biocultural approaches can be used to better understand and resolve real world problems and anthropological issues.

Adaptation in Cultural Evolution Alexander Alland, 1970. This book deals with the impact of disease-related behavior upon the evolution of culture.
