Ultrasonic Treatment of Light Alloy Melts G I Eskin, 1998-05-06 This is the first monograph to comprehensively cover the effect of using power ultrasound to refine and solidify aluminium and magnesium alloys The author is widely regarded as a pioneer in the field and the text is based on results obtained over the 40 years he has spent developing these techniques Ultrasonic treatment efficiently removes hydrogen and fine solid inclusions from melts and also helps create a refined grain structure during solidification in the ultrasonic field Both the fundamental and applied aspects of the formation of an extremely fine nondendritic grain

structure are discussed as well as the application of ultrasound to the process of zone melting *Light Metals 2016* The Minerals, Metals & Materials Society (TMS), 2016-02-08 The 2016 collection will include papers from the following symposia Alumina and Bauxite Aluminum Alloys Processing and Characterization Aluminum Reduction Technology Cast Shop Technology Electrode Technology Strip Casting Aluminum-Lithium Alloys Olga Grushko, Boris Ovsyannikov, Viktor Ovchinnikov, 2016-11-18 Aluminum Lithium Alloys Process Metallurgy Physical Metallurgy and Welding provides theoretical foundations of the technological processes for melting casting forming heat treatment and welding of Al Li alloys It contains a critical survey of the research in the field and presents data on commercial Al Li alloys their phase composition microstructure and heat treatment of the ingots sheets forgings and welds of Al Li alloys It details oxidation kinetics protective alloying hydrogen in Al Li alloys and crack susceptibility It also discusses grain structure and solidification as well as structural and mechanical properties The book is illustrated with examples of Al Li alloy applications in aircraft structures Based on the vast experience of the coauthors the book presents recommendations on solving practical problems involved with melting and casting ingots welding of Al Li alloys and producing massive stampings for welded products Provides comprehensive coverage of Al Li alloys not available in any single source Presents research that is at the basis of the production technology for of ingots and products made of Al Li alloys Combines basic science with applied research including upscaling and industrial implementation Covers welding of Al Li alloys in detail Discusses gas and alkali earth impurities in Al Li alloys Describes technological recommendations on casting and deformation of Al Li alloys Light Metals 2019 Corleen Chesonis, 2019-02-15 The Light Metals symposia at the TMS Annual Meeting Exhibition present the most recent developments discoveries and practices in primary aluminum science and technology The annual Light Metals volume has become the definitive reference in the field of aluminum production and related light metal technologies The 2019 collection includes papers from the following symposia 1 Alumina and Bauxite 2 Aluminum Alloys Processing and Characterization 3 Aluminum Reduction Technology 4 Cast Shop Technology 5 Cast Shop Technology Energy Joint Session 6 DGM TMS Symposium on Lightweight Metals 7 Electrode Technology for Aluminum Production 8 REWAS 2019 Cast Shop Recycling Technologies 9 Scandium Extraction and Use in Aluminum Alloys 10 Ultrasonic Processing of Liquid and Solidifying Alloys *Advances in Sonochemistry* T.J. methods of 3D printing Covers the manufacturing methods properties and importance of the following metals aluminum titanium magnesium copper nickel cobalt zinc cadmium noble metals rare earth metals lead tin and bismuth Includes new content on recent advances such as additive manufacturing and 3D printing of non ferrous metal alloys and specific powders for advanced techniques including metal injection molding technologies Expands on topics such as safety engineering in the production of powders and advanced areas of engineering research such as nanopowder processes **Shape Casting** Murat Tiryakioğlu, William Griffiths, Mark Jolly, 2019-02-08 This book contains a collection of papers on the science engineering and technology of shape casting with contributions from researchers worldwide Among the topics that are addressed are the structure property performance relationships modeling of casting processes and the effect of casting defects on the mechanical properties of cast alloys **Fundamentals of Aluminium Metallurgy** Roger Lumley, 2018-05-22 Fundamentals of Aluminium Metallurgy Recent Advances updates the very successful book Fundamentals of Aluminium Metallurgy As the technologies related to casting and forming of aluminum components are rapidly improving with new technologies generating alternative manufacturing methods that improve competitiveness this book is a timely resource Sections provide an overview of recent research breakthroughs methods and techniques of advanced manufacture including additive manufacturing and 3D printing a comprehensive discussion of the status of metalcasting technologies including sand casting permanent mold casting pressure diecastings and investment casting and recent information on advanced wrought alloy development including automotive bodysheet materials amorphous glassy materials and more Target readership for the book includes PhD students and academics the casting industry and those interested in new industrial opportunities and advanced products Includes detailed and specific information on the processing of aluminum alloys including additive manufacturing and advanced casting techniques Written for a broad ranging readership from academics to those in the industry who need to know about the latest techniques for working with aluminum Comprehensive up to date coverage with the most recent advances in the industry Power Ultrasonics Juan A. Gallego-Juarez, Karl F. Graff, 2014-11-14 The industrial interest in ultrasonic processing has revived during recent years because ultrasonic technology may represent a flexible green alternative for more energy efficient processes A challenge in the application of high intensity ultrasound to industrial processing is the design and development of specific power ultrasonic systems for large scale operation In the area of ultrasonic processing in fluid and multiphase media the development of a new family of power generators with extensive radiating surfaces has significantly contributed to the implementation at industrial scale of several applications in sectors such as the food industry environment and manufacturing Part one covers fundamentals of nonlinear propagation of ultrasonic waves in fluids and solids It also discusses the materials and designs of power ultrasonic transducers and devices Part two looks at applications of high power ultrasound in materials engineering and mechanical engineering food processing technology environmental monitoring and remediation and industrial and chemical processing including pharmaceuticals

medicine and biotechnology Covers the fundamentals of nonlinear propagation of ultrasonic waves in fluids and solids Discusses the materials and designs of power ultrasonic transducers and devices Considers state of the art power sonic applications across a wide range of industries

Sonochemistry Timothy J. Mason, Mircea Vinatoru, 2023-03-06 In the 1980 s sonochemistry was considered to be a rather restricted branch of chemistry involving the ways in which ultrasound could improve synthetic procedures predominantly in heterogeneous systems and particularly for organometallic reactions Within a few years the subject began to expand into other disciplines including food technology environmental protection and the extraction of natural materials Scientific interest grew and led to the formation of the European Society of Sonochemistry in 1990 and the launch of a new journal Ultrasonics Sonochemistry in 1994 The subject continues to develop as an exciting and multi disciplinary science with the participation of not only chemists but also physicists engineers and biologists The resulting cross fertilisation of ideas has led to the rapid growth of interdisciplinary research and provided an ideal way for young researchers to expand their knowledge and appreciation of the ways in which different sciences can interact It expands scientific knowledge through an opening of the closed doors that sometimes restrict the more specialist sciences The journey of exploration in sonochemistry and its expansion into new fields of science and engineering is recounted in Sonochemistry Evolution and Expansion written by two pioneers in the field It is unlike other texts about sonochemistry in that it follows the chronological developments in several very different applications of sonochemistry through the research experiences of the two authors Tim Mason and Mircea Vinatoru Designed for chemists and chemical engineers Written by two experts and practitioners in the subject Volume 1 covers the historical background and evolution of sonochemistry Volume 2 explains the wider applications and expansion of the subject VOLUME 2 Applications and Developments Volume 2 contains six chapters which detail the developments of sonochemistry in fields which continue to attract considerable research and development interest from academia and industry The topics range from the important developments in chemical synthesis through food technology and materials processing to therapeutic ultrasound The authors have made contributions to all of these and so the content is written in a way which should be understandable to readers whose expertise may not necessarily be in the individual topic Each of the applications and developments described help to illustrate not only the diverse nature of sonochemistry but also the unifying theme of the effects of acoustic cavitation on a wide range of procedures
