Ultrasound in Liquid & Solid Metals O. V. Abramov, 1994-04-08 Ultrasound in Liquid and Solid Metals focuses on the effect of intensive ultrasound on metals including the analysis of the development of cavitation and acoustic flows in melts mechanism of metals spraying and crystallization the formation of dislocation structure in crystals diffusion phase transformation and plastic deformation Physical fundamentals of intensive ultrasound effects are covered and detailed discussions are presented on the engineering principles of equipment and material design for the practical use of ultrasound in the refining of melts crystallization of ingots and molds pulverization plating pressure working of metals surface strengthening and other processes **"Development of an Ultrasonic Technique for Measuring the Velocity of the Liquid-solid Interface in Undercooled Metals"** Jonathan M. Greene, 1965 **Ultrasonic Treatment of Light Alloy Melts** G I Eskin, 1998-05-06 This is the first monograph to comprehensively cover the effect of using power ultrasound to refine and solidify aluminium and magnesium alloys The author is widely regarded as a pioneer in the field and the text is based on results obtained over the 40 years he has spent developing these techniques Ultrasonic treatment efficiently removes hydrogen and fine solid inclusions from melts and also helps create a refined grain structure during solidification in the ultrasonic field Both the fundamental and applied aspects of the formation of an extremely fine non-dendritic grain structure are discussed as well as the application of ultrasound to the process of zone melting *Investigation of the Propagation of Ultrasound in Liquids and Solids* Edward F. Carome, JOHN CARROLL UNIV CLEVELAND OHIO DEPT OF PHYSICS., 1968 Extensive research on various acoustic propagation effects has been completed This includes theoretical and experimental studies of diffraction effects of circular and rectangular sound sources and of attenuation effects in waveguide systems Studies have been made of the generation propagation and detection of acoustic transients in liquids and solids The results have been used in an investigation of laser induced acoustic impulses and damage An exhaustive study has been made of relaxation processes in liquids at very high frequencies Measurements of the velocity and absorption of ultrasound as functions of temperature and pressure have been made in several simple fluids including argon carbon dioxide and sulfur hexafluoride A program of study of the elastic and magnetoacoustic properties of the alkali metals has been established Author Ultrasonic Treatment of Light Alloy Melts Georgy I. Eskin, Dmitry G. Eskin, 2014-08-20 Spawned by growing interest in ultrasonic technology and new developments in ultrasonic melt processing the Second Edition of Ultrasonic Treatment of Light Alloy Melts discusses use of ultrasonic melt treatment in direct chill casting shape casting rapid solidification zone refining and more exploring the effects of power ultrasound on melt degassing filtration and refinement in aluminum and magnesium alloys The fully revised and restructured Second Edition Contains new in depth coverage of composite and nanocomposite materials Provides a historical review of the last century of ultrasonic applications to metallurgy Emphasizes the fundamentals mechanisms and applications of ultrasonic melt processing in different light metal

technologies Features new chapters on ultrasonic grain refinement refinement of primary solid phases and semi solid processing of billets with nondendritic structure Includes significant updates reflecting results obtained over the past two decades on different scales from laboratory to full scale industrial implementations Complete with many new figures and examples Ultrasonic Treatment of Light Alloy Melts Second Edition delivers a comprehensive treatise on ultrasonic melt processing and cavitation presenting essential guidelines for practical use and further development of the technology
