Force Majeure in the Hydropower Industry Daniel Constantin Diaconu, 2023-03-22 This book aims to highlight the particular situation faced by certain hydropower companies by the fact that they cannot fulfil their contracts due to force majeure The first part of this book will be an analysis of how water is used in electricity production It is important to point out that all types of energy sources use water to a different extent of course and that its spatial and temporal availability is very important The focus will be on hydropower presenting the current situation at the global level and the effect of reducing the amounts of water in the river system The second part is based on the presentation of the concept of force majeure and the ways of presenting and drafting it in a contract Many disputes or the success of a contract depended heavily on the provisions of this article of the contract Obviously there are also situations in which the signatory parties abuse or are not protected by these provisions of force majeure Starting from a few brief examples from the international level we reach a wide discussion of the situation created in Romania when the largest supplier of electricity produced on the basis of water terminates several contracts invoking force majeure The manner in which the opinion of the parties involved is presented to the court is analyzed and presented in detail

Tropical Cyclone Modeling and Prediction: Advances in Model Development and Its Applications Xuejin Zhang, Robert Rogers, Krishna K. Osuri, Vijay Tallapragada, Zhan

Zhang, 2025-06-02 Tropical cyclones TCs can cause billions of dollars in property damage and up to thousands of life losses globally every year In order to mitigate these socioeconomic impacts scientists have strived in developing sophisticated numerical modeling systems to provide better tools for research and forecast communities especially in those coastal

countries and regions that are impacted substantially by TCs in the past several decades Recently several accelerated efforts were made by several research and operational centers after tremendous property and life losses by landfall TCs in the North Atlantic the Western North Pacific and the North Indian Ocean basins The modeling systems in regional forecast centers are planning to upgrade to the next generation or make significant advances through those accelerations In this Research Topic the goal is to document the latest developments physics improvements data assimilation holistic forecast systems and their applications Themes include the significant model new features high resolution physics for TC applications data assimilation methodology and observational data impacts forecast experiments model verification and validation Studies on the role of physical processes associated with the boundary layer convection and microphysics radiation land surface processes air sea wave processes are encouraged The model evaluations including quantitative precipitation forecasts and tools and products for TC research and forecasts are welcome as well Novel studies and latest model developments having a research to operation R2O transition possibility will be considered for publication The ultimate goal is to exchange research ideas advances and understanding across the global TC communities We welcome Original Research and Review Articles from development observational numerical modeling and forecasting perspectives on TCs Articles can include but are not limited to the following topics Model development TC vortex initialization algorithm High resolution physics for TC Air sea wave interactions Model tracking and intensity verification Data assimilation methods Observational data impacts Model evaluation tools Model evaluation comparison products for research and forecasts and Novel studies based on new findings and methodology

Abrams, 2019-01-25 Archaeologists and the public at large have long been fascinated by monumental architecture built by past societies Whether considering the earthworks in the Ohio Valley or the grandest pyramids in Egypt and Mexico people have been curious as to how pre modern societies with limited technology were capable of constructing monuments of such outstanding scale and quality Architectural energetics is a methodology within archaeology that generates estimates of the amount of labor and time allocated to construct these past monuments This methodology allows for detailed analyses of architecture and especially the analysis of the social power underlying such projects Architectural Energetics in Archaeology assembles an international array of scholars who have analyzed architecture from archaeological and historic societies using architectural energetics It

is the first such volume of its kind In addition to applying architectural energetics to a global range of architectural works it outlines in detail the estimates of costs that can be used in future architectural analyses This volume will serve archaeology and classics researchers and lecturers teaching undergraduate and graduate courses related to social power and architecture It also will interest architects examining past construction and engineering projects **Climate change**
