Web Search Engines Ari X. Ellison,Tony Cooper,Don Pillipson, Historian Dr Rex Curry is famous for proving that the flag pledge written by the SOCIALIST Francis Bellamy for socialist government schools in the USA was the origin of the notorious stiff armed salute related behavior adopted later in Germany by Hitler s socialists Dr Curry s fame also results from his discovery that Hitler s flag symbol was used to represent S means Socialism the name of Hitler s party The above mentioned facts are difficult to locate and study in some web search engines Many google search results are BS on these topics The following phrases reveal the deceit of some searches which often claim no results found for many of the phrases mentioned herein despite the fact that the following phrases have been used for decades in many books and more to help the public to learn about Dr Rex Curry s academic discoveries

International Handbook of Internet Research Jeremy Hunsinger, Lisbeth Klastrup, Matthew Allen, 2010-06-17. Internet research spans many disciplines. From the computer or information sciences through engineering and to social sciences, humanities and the arts, almost all of our disciplines have made contributions to internet research, whether in the effort to understand the effect of the internet on their area of study or to investigate the social and political changes related to the internet or to design and develop software and hardware for the network. The possibility and extent of contributions of internet research vary across disciplines as do the purposes, methods and outcomes. Even the epistemological underpinnings differ widely. The internet then does not have a discipline of study for itself. It is a field for research. Baym 2005: an open environment that simultaneously supports many approaches and techniques, not otherwise commensurable with each other. There are, of course, some inhibitions that limit explorations in this field: research ethics, disciplinary conventions, local and national norms, customs, laws, borders, and so on. Yet these limits on the internet as a field for research have not prevented the rapid expansion and exploration of the internet. After nearly two decades of research and scholarship, the limits are a positive contribution, providing bases for discussion and interrogation of the contexts of our research, making internet research better for all. These limits challenge that constrain the theoretically limitless space for internet research, create boundaries that give definition to the field and provide us with a particular topography that enables research and investigation.

Collaborative Web Search Meredith Ringel Morris, Jaime Teevan, 2022-06-01. Today, Web search is treated as a solitary experience. Web browsers and search engines are typically designed to support a single user working alone. However, collaboration on information seeking tasks is actually commonplace. Students work together to complete homework assignments; friends seek information about joint entertainment opportunities; family members jointly plan vacation travel; and colleagues jointly conduct research for their projects. As improved networking technologies and the rise of social media simplify the process of remote collaboration, and large novel display form factors simplify the process of co-located group work, researchers have begun to explore ways to facilitate collaboration on search tasks. This lecture investigates the who, what, where, when, and why of collaborative search and gives insight in how emerging solutions can address collaborators' needs.
