Developing Creative Thinking in Beginning Design Stephen Temple, 2018-10-03 Learning to think and act creatively is a requisite fundamental aspect of design education for architectural and interior design as well as industrial and graphic design Development of creative capacities must be encountered early in design education for beginning students to become self actualized as skillful designers With chapters written by beginning design instructors Developing Creative Thinking in Beginning Design addresses issues that contribute to deficiencies in teaching creativity in contemporary beginning design programs Where traditional pedagogies displace creative thinking by placing

conceptual abstractions above direct experiential engagement the approaches presented in this book set forth alternative pedagogies that mitigate student fears and misconceptions to reveal the potency of authentic encounters for initiating creative transformational development These chapters challenge design pedagogy to address such issues as the spatial body phenomenological thinking making as process direct material engagement and its temporal challenges creative decision making and the wickedness of design and the openness of the creative design problem In doing so this book sets out to give greater depth to first design experiences and more effectively enable the breadth and depth of the teacher student relationship as a means of helping your students develop the capacity for long term self transformation

Collaborative Creative Thought and Practice in Music Margaret S. Barrett, 2016-05-23 The notion of the individual creator a product in

part of the Western romantic ideal is now troubled by accounts and explanations of creativity as a social construct. While in collectivist cultures the assimilation but not the denial of individual authorship into the complexities of group production and benefit has been a feature, the notion of the lone individual creator has been persistent. Systems theories acknowledge the role of others yet at heart these are still individual views of creativity focusing on the creative individual drawing upon the work of others rather than recognizing the mutually constitutive elements of social interactions across time and space. Focusing on the domain of music, the approach taken in this book falls into three sections: investigations of the people, processes, products and places of collaborative creativity; in compositional thought and practice; explorations of the ways in which creative collaboration provides a means of crossing boundaries between disciplines such as music performance and musicology; and studies of the emergence of creative thought and practice in educational contexts including that of the composer and the classroom. The volume concludes with an extended chapter that reflects on the ways in which the studies reported advance understandings of creative thought and practice. The book provides new perspectives to our understandings of the role of collaborative thought and processes in creative work across the domain of music including composition, musicology, performance, music education and music psychology.
