Capability Building and Global Innovation Networks Michael Gastrow, Glenda Kruss, 2017-10-02 This book explores the dynamics of global innovation networks and their implications for development Knowledge is often seen as the main determinant of economic growth competitiveness and employment There is a strong causal interaction between capability building and the growth in demand for and supply of technical and organizational innovation This complex of skills knowledge and innovation holds great potential benefit for development particularly in the context of developing countries However despite evidence of the increasing importance of knowledge and

innovation there has been relatively little research to understand the distribution and coordination of innovation and knowledge intensive economic activities on a global scale and what this might mean for economic development Each chapter though sharing an underlying conception of innovation systems innovation networks and their relation to capability building and development takes a different theoretical stance The authors explore the emerging relationship between competence building and the structure of global innovation networks thus providing a valuable new perspective from which to critically assess their development potential This book was originally published as a special issue of Innovation and Development

Design for Transport Mike Tovey, 2016-04-15 The central premise of Design for Transport is that the designer's role is to approach design for transport from the point of view of the user People have a collection of wants and needs and a significant proportion of them are to do with their requirements for mobility The authors show how creative designers can take a user focused approach for a wide range of types of transport products and systems In so doing their starting point is one of creative dissatisfaction with what is currently available and their specialist capability is in imagining and developing new solutions which respond to that opportunity How this is tackled varies depending on the context and the variety of solutions produced reflects the different aspirations and needs of the people they are designing for The chapters cover user needs and transport design and the transport system transport design case studies and the case for the automobile A conclusion briefly signals what the future for transport design might be Lavishly illustrated throughout in four colour Design for Transport is an imaginative and rigorous guide to how designers can take a user centred and socially responsible approach to tackling a range of types of transport from systems to products and from bicycles to automobiles demonstrating a rich array of solutions through case studies
