Many animal babies are born with all their fur or complete with feathers but the chinchilla kit is one of the few animals that is born with its eyes wide open Even puppies are born with their eyes closed Chinchillas cannot get their fur wet so instead of bathing in water chinchillas use volcanic ash to clean their fur This ash is found in the mountains where chinchillas live in the wild When chinchillas are kept as pets the chinchillas owner must purchase ash for the chinchilla to bathe in several times a week Chinchillas have very special little hands that can grab and hold items in much the same way that a human grabs and holds items Chinchillas are highly unique because they are one of the few species in the wild that are monogamous This means that they choose a partner and keep that same partner for life While all chinchillas are small in size especially compared to more common mammals like dogs and cats the chinchilla s body size is interesting because unlike most other mammal groups the chinchilla females are usually a bit larger than the males This is seen more often in spiders and even

birds but very rarely in mammals Most wild chinchillas are grey or brown in color while domestic pet chinchillas are the more colorful with white beige and violet being common Wild chinchillas in the Andes mountains rarely actually drink water because they eat a lot of fruits and succulent plants Succulent plants are plants in the cactus family that hold a lot of water in them The water inside the fruits and plants that the chinchilla eats gives them most of the water they need to live
