Botnets Heli Tiirmaa-Klaar, Jan Gassen, Elmar Gerhards-Padilla, Peter Martini, 2013-06-29 Malware poses one of the major threats to all currently operated computer systems The scale of the problem becomes obvious by looking at the global economic loss caused by different kinds of malware which is estimated to be more than US 10 billion every year Botnets a special kind of malware are used to reap economic gains by criminals as well as for politically motivated activities In contrast to other kinds of malware botnets utilize a hidden communication channel to receive commands from their operator and communicate their current status The ability to execute almost arbitrary commands on the infected machines makes botnets a general purpose tool to perform malicious cyber activities Botnets provides a comprehensive analysis of the topic and comprises both technical and non technical sections written by leading cybersecurity experts The non technical section addresses how botnet infrastructure could be exploited for national security and cybercrime purposes It approaches the subject as a public policy issue and analyzes the phenomenon of botnets from national security law enforcement and regulatory policy perspectives and makes recommendations for policy makers on different public policies highlighting the need for international response mechanisms The technical section provides insight into current botnet techniques and discusses state of the art countermeasures to combat the botnet threat in detail It includes new detection methods as well as different approaches to actively compromise running botnets *Kingdom of Lies* Kate Fazzini, 2019-06-11 Wow Kate Fazzini is the rare top level reporter who can make you see smell and feel a hidden world not just understand it Cybercrime and security has found its Michael Lewis Bret Witter co author of the 1 NYT bestseller *The Monuments Men* One of BookRiot s 50

afterthought minimally implemented at the end of the development lifecycle with the last dregs of the budget in order to meet negligent check box compulsory requirements Meanwhile adversaries are ever evolving and always just one system away We exist in an age of the weaponization of everything This is not merely a cyberwar we are now in a state of cyber kinetic meta war There was no clear beginning and there will be no end The pervasiveness of the Internet of Things the ubiquity of artificial intelligence and machine learning systems and the emergence of the machine human convergence where users are perpetually interconnected with vulnerable systems only compounds the hyper evolving attack surface Data is turned against users in an information war where nation states and special interest groups use sold and stolen metadata from meta hording internet service providers and social media companies to psycho socio economically manipulate entire populations Dragnet surveillance capitalists such as Facebook Comcast AT T and Google unfortunately supply these manipulating adversaries with an endless supply of metadata for this information war against the American and European public Metadata and electronic health records may prove far more powerful and more damning than the data stolen in prolific breaches like OPM These data enabled the precision targeting of specific or niche user subsets such as critical infrastructure owners and operators Metadata is leveraged to psychographically compel targets to respond to malicious lures Real news mixed with fake news propaganda watering hole attacks SQL injections spear phishing emails social engineering campaigns and other vectors are all real threats to national security Executives adhering to minimalistic check box frameworks or lobbying to minimize long overdue cybersecurity reformation are practicing little more than security theater Stringent cybersecurity and cyber hygiene reform is essential to ensure national security and to safeguard democracy I see the impossible work being done by of my friends at the federal agencies the Pentagon NATO Five Eyes and the intelligence community They recognize the threat surrounding each and every Information system Warfare no longer takes place solely on the battlefield Battles are fought along multiple vectors through numerous campaigns in the physical digital and cultural theaters It is time for the Information Security community to discard the shadow of ineffectiveness and ineptitude cast by the horde of capitalistic faux experts The public and private sector need Information security professionals capable of analyzing the hyper evolving threat landscape identifying emerging threats mitigating risks and remediating incidents in near real time using bleeding edge defense grade systems such as artificial intelligence and machine learning solutions instead of outdated perimeter and check box systems

Metadata: The Most Potent Weapon in This Cyberwar: The New Cyber-Kinetic-Meta War James Scott, 2019-02-28 Metadata or data about data is collected and recorded to describe data identify trends administer algorithmic solutions and model potential scenarios When one understands how to make sense of seemingly random metadata or how to pair the data with other exfiltrated data pools there are limitless possibilities for social engineering and cyber exploitation in attacks that weaponize psychographic and demographic Big Data algorithms In this publication entitled Metadata The Most Potent Weapon in This Cyber War The New Cyber Kinetic Meta War AotH offers a

rich analysis of this underreported threat to our National Security through a comprehensive assessment of how meta exploits are hyper evolving an already next generation adversarial landscape This includes discussions on How dragnet surveillance and retroactive legislation impede cybersecurity How S J Res 34 allows ISPs to undermine national security and privacy How Meta Exploits expedite nation state attacks on critical infrastructure How Meta Exploitation of Big data and metadata augments extremist recruiting of Niche personnel enables cyber kinetic attacks Unmasks users with psychographic and demographic algorithms Transforms remote contractors into insider threats Undermines Democratic institutions Impedes financial systems Precisely tailors disinformation and fake news Disrupts energy systems Can cripple the healthcare sector

Spam Nation Brian Krebs,2014-11-18 A New York Times bestseller and winner of a 2015 Prose Award There is a threat lurking online A secret war with the power to destroy your finances steal your personal data and endanger your life In Spam Nation investigative journalist and cybersecurity expert Brian Krebs unmasks the criminal masterminds driving some of the biggest spam and hacker operations targeting Americans and their bank accounts Tracing the rise fall and alarming resurrection of the digital mafia behind the two largest spam pharmacies and countless viruses phishing and spyware attacks he delivers the first definitive narrative of the global spam problem and its threat to consumers everywhere Blending cutting edge research investigative reporting and firsthand interviews this terrifying true story reveals how we unwittingly invite these digital thieves into our lives every day From unassuming computer programmers right next door to digital mobsters like Cosma who unleashed a massive malware attack that has stolen thousands of Americans logins and passwords Krebs uncovers the shocking lengths to which these people will go to profit from our data and our wallets Not only are hundreds of thousands of Americans exposing themselves to fraud and dangerously toxic products from rogue online pharmacies but even those who never open junk messages are at risk As Krebs notes spammers can and do hack into accounts through these emails harvest

personal information like usernames and passwords and sell them on the digital black market The fallout from this global epidemic doesn't just cost consumers and companies billions it costs lives too Fast paced and utterly gripping Spam Nation ultimately proposes concrete solutions for protecting ourselves online and stemming this tidal wave of cybercrime before it's too late Krebs's talent for exposing the weaknesses in online security has earned him respect in the IT business and loathing among cybercriminals His track record of scoops has helped him become the rare blogger who supports himself on the strength of his reputation for hard nosed reporting Bloomberg Businessweek [This is how They Tell Me the World Ends](#) Nicole Perlroth, Bloomsbury (Firm), 2021 WINNER OF THE FT MCKINSEY BUSINESS BOOK OF THE YEAR AWARD 2021 The instant New York Times bestseller A Financial Times and The Times Book of the Year A terrifying exposé The Times Part John le Carr Spellbinding New Yorker We plug in anything we can to the internet We can control our entire lives economy and grid via a remote web control But over the past decade as this transformation took place we never paused to think that we were also creating the world's largest attack surface And that the same nation that maintains the greatest cyber advantage on earth could also be among its most vulnerable Filled with spies hackers arms dealers and a few unsung heroes This Is How They Tell Me the World Ends is an astonishing and gripping feat of journalism Drawing on years of reporting and hundreds of interviews Nicole Perlroth lifts the curtain on a market in shadow revealing the urgent threat faced by us all if we cannot bring the global cyber arms race to heel **Countdown to Zero Day** Kim Zetter, 2015-09-01 A top cybersecurity journalist tells the story behind the virus that sabotaged Iran's nuclear efforts and shows how its existence has ushered in a new age of warfare one in which a digital attack can have the same destructive capability as a megaton bomb Immensely enjoyable Zetter turns a complicated and technical cyber story into an engrossing whodunit The Washington Post The virus now known as Stuxnet was unlike any other piece of malware built before Rather than simply hijacking targeted computers or stealing information from them it proved that a piece of code could escape the digital realm and wreak actual physical destruction in this case on an Iranian nuclear facility In these pages journalist Kim Zetter tells the whole story behind the world's first cyberweapon covering its genesis in the corridors of the White House and its effects in Iran and telling the spectacular unlikely tale of the security geeks who managed to unravel a top secret sabotage campaign years in the making But Countdown to Zero Day also ranges beyond Stuxnet itself exploring the history of cyberwarfare and its future showing us what might happen should our infrastructure be targeted by a Stuxnet style attack and ultimately providing a portrait of a world at the edge of a new kind of war **A Cyberworm that Knows No Boundaries** Isaac Porche, Jerry M. Sollinger, Shawn McKay, United States. Department of Defense. Office of the Secretary of Defense, National Defense Research Institute (U.S.), Rand Corporation, 2011 Iran's announcement that a computer worm called Stuxnet had infected computers that controlled one of its nuclear processing facilities marked a signal event in cyber attacks Although such attacks were known to be theoretically possible the incident proved that a cyberworm could successfully infiltrate a system and produce

physical damage Furthermore the sophisticated nature of the worm and the resources that would have been required to design produce and implant it strongly suggest a state sponsored effort It has become clear that Stuxnet like worms pose a serious threat even to infrastructure and computer systems that are not connected to the Internet However defending against such attacks is an increasingly complex prospect The nature of cyberspace ensures that the attacker has the upper hand and can move about with impunity and relative anonymity The sophistication of virulent malware has also made it difficult to detect whether an intrusion has occurred and attackers have a wide range of means at their disposal to gain access to networks even those that are closed Finally bureaucratic and legal barriers can hinder the ability to mount a successful defense Under the current framework different organizations have different responsibilities and different levels of authority when it comes to investigating or defending against intrusions depending on the nature of the attack its geographic origin and the systems it targets In addition there is a need to protect critical government and private sector infrastructure in a way that does not infringe on civil liberties or proprietary data The authors argue that new legislation is needed to establish a more efficient assignment of responsibilities and a revised legal code may be required to successfully defend against the ever evolving cyber threat
