Lexis and Creativity in Translation Dorothy Kenny, 2014-04-08 Computers offer new perspectives in the study of language allowing us to see phenomena that previously remained obscure because of the limitations of our vantage points It is not uncommon for computers to be likened to the telescope or microscope in this respect In this pioneering computer assisted study of translation Dorothy Kenny suggests another image that of the kaleidoscope playful changes of perspective using corpus processing software allow textual patterns to come into focus and then recede again as others take their place And against the background of repeated patterns in a corpus creative uses of language gain a particular prominence In *Lexis and Creativity in Translation* Kenny monitors the translation of creative source text word forms and collocations uncovered in a specially constructed German English parallel corpus of literary texts Using an abundance of examples she reveals evidence of both normalization and ingenious creativity in translation Her discussion of lexical creativity draws on insights from traditional morphology structural semantics and most notably neo Firthian corpus linguistics suggesting that rumours of the demise of linguistics in translation studies are greatly exaggerated *Lexis and Creativity in Translation* is essential reading for anyone interested in corpus linguistics and its impact so far on translation studies The book also offers theoretical and practical guidance for researchers who wish to conduct their own corpus based investigations of translation No previous knowledge of German corpus linguistics or computing is assumed

The Verb in Contemporary English Bas Aarts, Charles F. Meyer, 2006-06 This collection of essays by some of the leading scholars in the field sheds new light on the verb in English The central concern of the volume is to illustrate that verbs can only be adequately and properly understood if studied from both a theoretical and descriptive perspective In part one theoretical topics are explored terminological problems of classifying verbs and verb related elements the determining properties of verbs verb complementation the semantics and pragmatics of verbs and verbal combinations and the notions of tense aspect voice and modality In part two computer corpora are used to study various types of verb complements and collocations to trace the development in English of certain verb forms and to detail the usage of verbs in different varieties and genres of English

Adverbs and Comparatives Conrad Sabourin, 1977-01-01 There are indications that interest in the study of adverbs has been growing steadily in recent years largely due to the so called Chomskyan revolution in linguistics which put much emphasis on the study of syntax but probably also because of the position these adverbs and other particles take within a syntactic string has proved to be much more difficult to determine than had previously been thought Still another reason for the increase of interest in this topic may be found in the recent trend in linguistics which focusses on communicative competence and actual language use in daily discourse Although this bibliography has no claim to exhaustiveness it should nonetheless be useful to researchers working on adverbs and comparatives The titles selected relate

in one way or another to the problems the linguist faces with respect to the adverb

Analysing English-Arabic Machine Translation Zakaryia Almahasees, 2021-11-29 Machine Translation MT has become widely used throughout the world as a medium of communication between those who live in different countries and speak different languages. However, translation between distant languages constitutes a challenge for machines. Therefore, translation evaluation is poised to play a significant role in the process of designing and developing effective MT systems. This book evaluates three prominent MT systems including Google Translate, Microsoft Translator, and Sakhr, each of which provides translation between English and Arabic. In the book, Almahasees scrutinizes the capacity of the three systems in dealing with translation between English and Arabic in a large corpus taken from various domains including the United Nations, the World Health Organization (WHO), the Arab League, Petra News Agency reports, and two literary texts: *The Old Man and the Sea* and *The Prophet*. The evaluation covers holistic analysis to assess the output of the three systems in terms of Translation Automation User Society (TAUS) adequacy and fluency scales. The text also looks at error analysis to evaluate the systems' output in terms of orthography, lexis, grammar, and semantics at the entire text level and in terms of lexis, grammar, and semantics at the collocation level. The research findings contained within this volume provide important feedback about the capabilities of the three MT systems with respect to English-Arabic translation and pave the way for further research on such an important topic. This book will be of interest to scholars and students of translation studies and translation technology.

Teaching Translation from Spanish to English Allison Beeby Lonsdale, Allison Beeby, 1996 While many professional translators believe the ability to translate is a gift that one either has or does not have, Allison Beeby Lonsdale questions this view. In her innovative book, Beeby Lonsdale demonstrates how teachers can guide their students by showing them how insights from communication theory, discourse analysis, pragmatics, and semiotics can illuminate the translation process. Using Spanish to English translation as her example, she presents the basic principles of translation through 29 teaching units which are prefaced by objectives, tasks, and commentaries for the teacher and through 48 task sheets which show how to present the material to students. Published in English.

REFRAMING ENGLISH EDUCATION IN ASIA Evelyn Doman, 2015-02-16 English language teaching (ELT) has changed dramatically over the past decade in Asia, an area of the world where English is taught as a foreign language rather than a second language. A drastic movement has been made from the traditional Grammar-Translation Method to more communicative approaches to teaching and learning, such as project-based and task-based learning. In this book, the authors outline the development of ELT in Asia in the past decade in the wider context of educational reform in the region, which puts greater value on the acquisition of English and in student-centered classrooms. Given the growing importance of English and the enormous energy and enthusiasm in the region for learning the language in both formal and informal contexts, ELT will continue to flourish. University and secondary school teachers and researchers from five different Asian countries share methodologies and innovative programs that they have found to be successful in their classrooms.
