Wetland Environments James S. Aber, Firooza Pavri, Susan W. Aber, 2012-08-24 Wetlands swamp marsh bayou tundra and bog are places that are rarely visited and often misunderstood but they have in fact conspicuous roles in the physical biological and cultural geography of the world They are intrinsically beautiful environments where one may see the natural and essential values in the interaction of water soil vegetation wildlife and humans Wetlands occur at the confluence of unique terrestrial hydrological and climatic conditions that give rise to some of the most biodiverse regions of the world They also play vital roles in the cycling and storage of key nutrients materials and energy through the Earth's system A complete study of wetland environments requires the assessment of their physical and biological attributes properties and functions of these ecosystems and the economic political and social aspects that mediate their use globally A systems approach is taken throughout this book which emphasizes the interactions between these elements of wetland ecosystems Moreover selected case studies from across the world are used to illustrate wetland characteristics and circumstances This book is intended to foster a greater awareness and appreciation of wetlands promote a culture of conservation and wise management and spread the knowledge that wetlands are important indeed crucial elements of the global environment Our attempts to understand manage and enhance wetlands in the twenty first century are part of the larger effort to maintain a sustainable Earth Readership Introductory or intermediate level undergraduates taking courses on wetland environments Additional resources for this book can be found at www.wiley.com/go/aber/wetland

Malcolm Lillie, Stephen Ellis, Helen Fenwick, 2007 For the past thirty years or so wetlands have been at the forefront of developments in understanding past cultural activity and associated landscapes Waterlogged environments and contexts not only preserve the organic part of the cultural record but they also provide an archive of the environmental conditions pertaining at the time the deposits form thereby allowing the detailed reconstruction of their associated environments and landscapes

Wetland Management R. A. Falconer, P. Goodwin, 1994 In recent years there has been growing concern about the management of wetlands particularly in the USA and increasingly in Europe These wetlands ranging from a small harbour such as Christchurch in the UK to the large mangrove swamps of Malaysia are natural resources which require comprehensive management Whilst considerable research has been undertaken and documented on the management of wetland ecosystems little emphasis has been focused on the geomorphic hydraulic and hydrologic behaviour of wetlands and the consequent implications for practical management solutions
