**Green Equilibrium** Christopher Wills,2013-03-28 In Green Equilibrium Christopher Wills explains the rules by which ecosystems maintain a diversity of interdependent species in particular the balance of predators and prey Wills is both an eminent academic and a hugely experienced field biologist In presenting the concept of green equilibrium he draws on a fascinating range of examples including coral reefs off the densely populated Philippines the isolated and densely forested valleys of Papua New Guinea the changing Himalayan kingdom of Bhutan and a Californian ranch being allowed to return to a wild state In each case he assesses the impact of modern changes and attempts at conservation on these delicately balanced ecosystems Wills shows how human populations too are an integral part of the picture We now know from genetic evidence that over the course of history as humans spread out of Africa populations adapted as a result of environmental conditions Striking new evidence indicates that some human populations carry genes from past encounters with other hominids Neanderthals and Denisovans as well as genetic adaptations to local

hazards such as malaria Wills argues that the most effective approaches to conserving green equilibria come out of evolutionary insights and from close involvement of the local communities who have lived and adapted to them **Of**

*Bibliography of*

*Natural History Travel Narratives* Anne S. Troelstra, 2017-06-01 Anne Troelstra's fine bibliography is an outstanding and ground breaking work. He has provided the academic world with a long needed bibliographical record of human endeavour in the field of the natural sciences. The travel narratives listed here encompass all aspects of the natural world in every part of the globe but are especially concerned with its fauna, flora and fossil remains. Such eyewitness accounts have always fascinated their readers but they were never written solely for entertainment. Fragmentary though they often are, these narratives of travel and exploration are of immense importance for our scientific understanding of life on earth, providing us with a window on an ever changing and often vanishing natural world. Without such records of the past we could not track, document or understand the significance of changes that are so important for the study of zoogeography. With this book Troelstra gives us a superb overview of natural history travel narratives. The well over four thousand detailed entries ranging over four centuries and all major western European languages are drawn from a wide range of sources and include both printed books and periodical contributions. While no subject bibliography by a single author can attain absolute completeness, Troelstra's work is comprehensive to a truly remarkable degree. The entries are arranged alphabetically by author and chronologically by the year of first publication under the author's name. A brief biography with the scope and range of their work is given for each author; every title is set in context; the contents, including illustrations, are described and all known editions and translations are cited. In addition, there is a geographical index that cross refers between authors and the regions visited and a full list of the bibliographical and biographical sources used in compiling the bibliography.

**Hungry for Ecstasy** Sharon Klayman Farber, 2012-11-16 *Hungry for Ecstasy: Trauma, The Brain and the Influence of the Sixties* by Sharon Klayman Farber explores the hunger for ecstatic experience that can lead people down the road to self destruction. In an attempt to help mental health professionals and concerned individuals understand and identify the phenomenon and ultimately intervene with patients, friends and loved ones, Farber speaks both personally and professionally to the reader. She discusses the different paths taken on the road to ecstatic states. There are religious ecstasies, ecstasies of pain and near death experiences, cult induced ecstasies, creative ecstasies and ecstasies from hell. *Hungry for Ecstasy* explores not only the neuroscientific processes involved but also the influence of the sixties in driving people to seek these states. Finally, Farber draws from her own personal and professional experience to advise others how to intervene on behalf of the person whose behavior puts his or her life at risk.

*Between the Tides* David Pickell, 2003-04-15 Featuring hundreds of original color photographs, this fascinating study of New Guinea chronicles the rituals and daily life of this remote and culturally rich region. *Between the Tides* offers a compelling mix of New Guinean storytelling, history, natural history, politics and culture. David Pickell brings warmth and intelligence to his subject and Kal Muller's photographs are surprising and evocative. Together, author and photographer show how an isolated nomadic past meets a worldly urban future; history confronts superstition and a false and imposed sense of shame yields to a new and still fragile pride. Their journey took them from the dusty New Guinea

frontier town of Timika to tiny Lakahia island along two hundred miles of twisting mangrove creeks and the relentlessly uncooperative Arafura sea What they found was a culture facing the delicate sometimes humorous occasionally painful and always interesting process of change Library Journal ,1999 **Conservation Is Our Government Now** Paige West,2006-05-31 Ethnography and critique of conservationist efforts in Papua New Guinea focusing on the misunderstandings mistranslations and complexities that arise in the discourse between conservation biologists and local people
