Woman's World, 1928 **Our Cold Climate Transition** Rex J. Fleming, 2024-03-26 Dr Rex J Fleming received his B S degree from Creighton University with a major in mathematics He later obtained a M S and Ph D from the U of Michigan in the field of Atmospheric Science He has over 50 years of experience in weather and climate research His Ph D thesis involved the study of energy interactions within the atmosphere and a stochastic dynamic method of improving our understanding of those atmospheric interactions in light of uncertain initial conditions The world is in chaos now due to the deliberate false theory that our climate is being warmed by the use of fossil fuel Many countries are deeply concerned with energy issues will there be enough energy resources available to keep people warm through the coming winter periods There have been many previous exaggerated claims that climate change warming was bad for mankind The opposite is true warmer periods have been very beneficial for humankind The latest claim from the United Nations UN is that the world will burn up with a 5 alarm fire unless the world stops using fossil fuel by a critical date is almost comical but one cannot laugh as this false theory has now reached a very serious point there are no efficient alternatives to fossil fuels and a cold regime is coming Not every year in a cold regime is severe but in the coldest periods deaths may result if energy is not sufficiently available Weather and the climate are chaotic There is rarely a sharp line between the end of a warm period and the start of a cool period There can be a discernable transition between the end of a warm period and the beginning of a cold period hence the title of this book A three year transition was seen at the end of the Medieval Warming Period 900 AD 1300 AD and the beginning of the Little Ice Age 1303 1850 during which millions died of starvation from famines This current cold climate transition is described in this book Will there be a 4th year of transition or the actual start of the Modern Cooling 2023 While there is considerable information contained in this book perhaps the single most relevant point is formulated in Chapter 10 page 90 Here we have the summary of the important physical evidence the appropriate statistical data and the effects of chaos rolled into a single statement about the next severe cold period likely occurring in 2030 4 years

[With Plates.]** Thomas BURNET (Master of the Charter House.), 1816 **Looking out the Window** Bob Webster, 2022-01-25 The hot dry seasons of the past few years have caused rapid disintegration of glaciers in Glacier National Park Montana Sperry Glacier has lost one quarter or perhaps one third of its ice in the past 18 years If this rapid rate should continue the glacier would almost

disappear in another 25 years Born about 4 000 years ago the glaciers that are the chief attraction in Glacier National Park are shrinking so rapidly that a person who visited them ten or fifteen years ago would hardly recognize them today as the same ice masses Do these reports sound familiar Typical of frequent warnings of the dire consequences to be expected from global warming such reports often claim modern civilization s use of fossil fuels as being the dominant cause of recent climate warming You might be surprised to learn the reports above were made nearly thirty years apart The first in 1923 prior to the record heat of the Dust Bowl years during the 1930s The second in 1952 during the second decade of a four decade cooling trend that had some scientists concerned that a new ice age might be on the horizon Did the remnants of Sperry Glacier disappear during global warming of the late 20th century According to the US Geological Survey USGS today Sperry Glacier ranks as a moderately sized glacier in Glacier National Park What caused the warmer global climate prior to 4 000 years ago before Glacier National Park s glaciers first appeared Are you aware that during 2019 the National Park Service quietly began removing its Gone by 2020 signs from Glacier National Park as its most famous glaciers continued their renewed growth that began in 2010 Was late 20th century global warming caused by fossil fuel emissions Was it really more pronounced than early 20th century warming Or was late 20th century warming perfectly natural in part a response to the concurrent peak strength of one of the strongest solar grand maxima in contemporary history These and other questions are addressed by Looking Out the Window Be a juror in the trial of carbon dioxide in the court of public opinion and let the evidence inform your verdict
