Twins From Fetus To Child:

Twins Alessandra Piontelli, 2002 Though much has been written about twins very little research has been done into their everyday lives both postnatal and prenatal In this fascinating new study Alessandra Piontelli follows the development and behaviour of thirty pairs of twins from their early life in the womb through to their third year of childhood Drawing on detailed ultrasound observations and work with mothers and families in clinical and natural settings the text traces the subtle ways in which various types of twins live behave and interact with their unequally shared and unique pre and postnatal environments Piontelli shows how from early on distinctive and personal traits can be seen in the behaviour of each member of a twin couple and how these traits continue and strengthen well beyond birth The book describes not only the behaviour of the twins but the impact they have on the lives of their family and carers what family members say how they react and how the family changes Scientifically based but warmly human in content this unique longitudinal study offers new insight for professionals working with mothers and families of twins and for researchers in human development across a range of disciplines

Twins - From Fetus to Child Alessandra Piontelli, 2012-09-10 Though much has been written about twins very little research has been done into their everyday lives both postnatal and prenatal In this fascinating new study Alessandra Piontelli follows the development and behaviour of thirty pairs of twins from their early life in the womb through to their third year of childhood Drawing on detailed ultrasound observations and work with mothers and families in clinical and natural settings the text traces the subtle ways in which various types of twins live behave and interact with their unequally shared and unique pre and postnatal environments Piontelli shows how from early on distinctive and personal traits can be seen in the behaviour of each member of a twin couple and how these traits continue and strengthen well beyond birth The book describes not only the behaviour of the twins but the impact they have on the lives of their family and carers what family members say how they react and how the family changes Scientifically based but warmly human in content this unique longitudinal study offers new insight for professionals working with mothers and families of twins and for researchers in human development across a range of disciplines

From Fetus to Child Alessandra Piontelli, 2003-09-02 The use of ultrasonic scans in pregnancy makes it possible to observe the fetus undisturbed in the womb Dr Alessandra Piontelli has done what no one has done before she observed eleven fetuses three singletons and four sets of twins in the womb using ultrasound scans and then observed their development at home from birth up to the age of four years She includes a description of the psychoanalytic psychotherapy of one of the research children and the psychoanalysis of five other very young children whose behaviour in analysis suggested that they were deeply preoccupied with their experience in the womb Dr Piontelli has discovered what many parents have always thought that each fetus like each newborn baby is a highly individual creature By drawing on her experience as a child psychotherapist and psychoanalyst as well as on her observational research she is able to investigate issues relating to individuality psychological birth and the influence of

maternal emotions during pregnancy Her findings demonstrate clearly how psychoanalytical evidence enhances deepens and supports observational data on the remarkable behavioural and psychological continuities between pre natal and post natal life

Development of Normal Fetal Movements Alessandra Piontelli,2010-11-08 This work sees the light for various reasons There is a general lack of detailed information about the earliest stages of human motor development The reasons for this are explained more fully in the Introduction here we may simply state that apart from their intrinsic interest earlier phenomena are fundamental to the comprehension of later phenomena rooted in them whether pathological or normal This is especially so in the rapidly veloping young organism At birth the neonate is catapulted into a profoundly different physical and social enviro nment requiring extremely diverse functioning suffice it to mention aerial respiration no longer being fed through the placenta and the cord and the full impact of gravity on neonatal movements The neonate generally adapts smoothly to the transition as it has been equipped to do so during the 9 months of pregnancy However the study of the early stages of fetal motor development should not be exclusively directed towards the und standing of functioning in the neonate
