Corporation. Irvine, Calif.,1996 **Autosim User Guide** ,1994 Autosim is a software package written to control and trigger the programmable instruments that are used to supply simulated signals to the recording devices on underground nuclear weapons effects tests at the Nevada Test Site These instruments are located either in the tunnel or at a remote site and may be controlled from anywhere on the Department 9320 Computer Network Autosim incorporates commands to control the operation of the Laser Calibrator that is a fiber optic device that transmits a signal from down hole to the uphole recorders Autosim also supports the task of characterizing the cable links by communicating to some high bandwidth digitizers that are used to input the pulse of the downhole simulator To minimize the learning interval Autosim utilizes menus and offers on line help on most of the selections in the menu options *User's Guide for POWERSIM and Associated Programs* ,1996 This report provides an overview of the power simulation code developed by the AT for analysis of energy and power flow

throughout combat vehicles equipped with electric weapons The purpose of the code which has been nicknamed POWERSIM is to provide an intuitive modeling environment for this analysis under the rather complex mission sequences associated with battlefield operation of these vehicles The utility of simulating the power flow through the vehicle under these conditions hinges on assessing the impact of all the power system components on the overall vehicle system performance under conditions movement and firing which are considered realistic for the application of interest The use of this code can through the appropriate graphical user interfaces 1 configure complex mobility and firing sequences 2 configure a hybrid electric combat vehicle with electric weapons 3 run simulations for mobility loads alone 4 run simulations with mobility and firepower and 5 perform some simple analysis of the simulation results Additional analysis can easily be performed on the wealth of data which is generated on individual component conditions as needed through user defined functions The code described here is the first complete version of the code and development continues on adding component models and increasing the accuracy and speed of the existing component models
