Australian Mammal Society, 1992-06

[The Action Plan for Australian Mammals 2012](#) Andrew Burbidge, John Woinarski, Peter Harrison, 2014-06-02 The Action Plan for Australian Mammals 2012 is the first review to assess the conservation status of all Australian mammals It complements The Action Plan for Australian Birds 2010 Garnett et al 2011 CSIRO Publishing and although the number of Australian mammal taxa is marginally fewer than for birds the proportion of endemic extinct and threatened mammal taxa is far greater These authoritative reviews represent an important foundation for understanding the current status fate and future of the nature of Australia This book considers all species and subspecies of Australian mammals including those of external territories and territorial seas For all the mammal taxa about 300 species and subspecies considered Extinct Threatened Near Threatened or Data Deficient the size and trend of their population is presented along with information on geographic range and trend and relevant biological and ecological data The book also presents the current conservation status of each taxon under Australian legislation what additional information is needed for managers and the required management actions Recovery plans where they exist are evaluated The voluntary participation of more than 200 mammal experts has ensured that the conservation status and information are as accurate as possible and allowed considerable unpublished data to be included All accounts include maps based on the latest data from Australian state and territory agencies from published scientific literature and other sources The Action Plan

concludes that 29 Australian mammal species have become extinct and 63 species are threatened and require urgent conservation action. However, it also shows that where guided by sound knowledge, management capability and resourcing, and longer term commitment, there have been some notable conservation success stories and the conservation status of some species has greatly improved over the past few decades. The Action Plan for Australian Mammals 2012 makes a major contribution to the conservation of a wonderful legacy that is a significant part of Australia's heritage. For such a legacy to endure, our society must be more aware of and empathetic with our distinctively Australian environment and particularly its marvellous mammal fauna. Relevant information must be readily accessible, environmental policy and law must be based on sound evidence, those with responsibility for environmental management must be aware of what priority actions they should take, the urgency for action and consequences of inaction must be clear, and the opportunity for hope and success must be recognised. It is in this spirit that this account is offered.

European Whales, Dolphins, and Porpoises Peter G. H. Evans, 2019-12-04. *European Whales, Dolphins, and Porpoises: Marine Mammal Conservation in Practice* presents an intimate view of the workings of international conservation agreements to protect marine mammals, detailing achievements over the last 25 years, identifying weaknesses and making recommendations that governments, scientists, marine stakeholders and the public can take to improve conservation efforts. The book is written by an experienced marine mammal scientist and award-winning conservationist, providing a unique synthesis on their status, distribution and ecology. In addition, it presents information on various conservation threats, including fisheries bycatch, contaminants, noise disturbance, plastic ingestion and climate change. This comprehensive resource will appeal to marine mammal conservationists and researchers, as well as environmental and wildlife practitioners at all levels. Offers an accessible review on how scientists study this challenging group of mammals to gather necessary evidence for conservation action. Illustrates with striking images all recorded regional species, including distribution maps, key threats and specific research methods. Includes contributions from leading scientists, conservationists and members of government and international bodies like IWC and UNEP.

Whale Watching 2000: Worldwide Tourism Numbers, Expenditures, and Expanding Socioeconomic Benefits Erich Hoyt, 2000.

An Archaeology of Australia Since 1788 Susan Lawrence, Peter Davies, 2010-10-21. This volume provides an important new synthesis of archaeological work carried out in Australia on the post-contact period. It draws on dozens of case studies from a wide geographical and temporal span to explore the daily life of Australians in settings such as convict stations, goldfields, whalers' camps, farms, pastoral estates and urban neighbourhoods. The different conditions experienced by various groups of people are described in detail, including rich and poor convicts and their superiors, Aboriginal people, women, children and migrant groups. The social

themes of gender class ethnicity status and identity inform every chapter demonstrating that these are vital parts of human experience and cannot be separated from archaeologies of industry urbanization and culture contact The book engages with a wide range of contemporary discussions and debates within Australian history and the international discipline of historical archaeology The colonization of Australia was part of the international expansion of European hegemony in the eighteenth and nineteenth century The material discussed here is thus fundamentally part of the global processes of colonization and the creation of settler societies the industrial revolution the development of mass consumer culture and the emergence of national identities Drawing out these themes and integrating them with the analysis of archaeological materials highlights the vital relevance of archaeology in modern society
